

## **For next time**

Write a lab report describing the experiment you have performed. You should include information about building the  $\Delta 5$  plasmid, an essential component created for your ultimate investigation, but you should focus your report on the recombination experiment you performed. As you sit down to write, it might be wise to reread the information about lab reports that is included as supplementary material with the lab manual and here: [20.109:Guidelines for writing a lab report](#).
