

HST.921 Project Proposal

Company Name	Bienmoyo Foundation
Primary Contact	Jeffrey Blander, Executive Director
Specialty area of interest	Localized software development project teams
Project title/proposal	"'IT Alley' Mentorship and Development Program"
Brief description of project	<p>Bienmoyo (www.bienmoyo.org) is looking for a highly motivated group of HST 921 students interested in international health care program development and sustainable non-profit foundation planning. The student group will have an opportunity to work on creating new sustainable paradigms for designing, incubating, and implementing a portfolio of high impact social ventures within resource-poor settings. The HST 921 mentored project experience will be directly with the Executive Director of Bienmoyo (and current associate director of HST 921), a new entrepreneurial non-profit organization focused on the intersection of business, public health, and the medical diagnostics industry. The HST 921 group design project will be designed to meet the student's personal career development goals by directly tailoring the experience based upon input from the student within the first week of forming the project group.</p> <p>'IT Alley' Mentorship and Development Program</p> <p>Bienmoyo is in the midst of starting, with several collaborators, a very exciting pilot effort focused on the creation of localized software development project teams. These teams will be supported with the latest software and database development tools as well as training resources. 'IT Alley' teams will help participate in project design, development, and on-going maintenance work in collaboration with more experienced Bienmoyo technology company partners on open source projects. The concept of 'IT Alley' programs is they should create localized mentorship, rationale design, knowledge transfer, and sustainability for open source coding projects.</p>
Other	<p>About Bienmoyo™ Bienmoyo is a MA registered US IRS 501 c(3) organization supporting the prevention of non-infectious diseases and the promotion of health in resource poor settings. Bienmoyo supports collaborators living and working in resource poor settings through enhanced access to strategic business planning and advisory services, technology adoption protocols and rapid test diagnostic supplies with a special focus on non-infectious disease management. Through short-term on-the-ground advisory services, transparent and stringent financial management, and continuous monitoring of targeted milestones,</p>

	<p>Bienmoyo enhances project accountability. Bienmoyo strengthens indigenous capacity and emphasizes knowledge transfer strategies with local partners.</p>
