

# WeeklyAssignment6

-- **MitchelResnick** - 18 Oct 2004

**Download** and experiment with StarLogo. The software download includes a collection of sample projects (in a Sample Projects folder within the StarLogo folder). Try the following projects: (1) In the Biology folder: termites, rabbits, slime, (2) In Social Systems folder: traffic (3) In Graphics folder: graphics, (4) In Physics folder: rope

For each of these projects, there is a Web page with background information about the project and suggestions of things to try. Go to <http://education.mit.edu/starlogo/> , then click on Projects. Each project also has an "Info Window" (under the "Windows" menu in the application), but this information tends not to be as complete as the information on the Web pages.

Write about an interesting or surprising experience you had while experimenting with Starlogo software.
