1. Team: Monnette Fung, Alisa Rhee, Ilene Chen We're planning to design a multi-user virtual environment for kids. Some features of this virtual rec center will include instant messaging, club/chat rooms kids can set up and design, remote multi-player games and some collaborative tools like doodling and writing.

<http://www.imaginationcubed.com/LaunchPage#> This is a really neat page created by General Electric, it's sorta of coinciding with their theme of "Imagination at work." You can pick tools to draw with, colors, save the file and send it to someone. When someone sees the URL, the drawing is replayed in slow motion.

[Hei-Jung: I thought the movement of the pen was superb. Unlike other paint/draw tools, I felt that the pen in this tool felt very close to the real thing.]
