**LUIS PEREZ-
BREVA:**

My name is Luis Perez-Breva, and I teach the MIT class on how to move technologies from lab to impact. It is called Innovation Teams, and it's the longest-running course at MIT in technology innovation. In it, students learn to solve problems with technology.

This series of videos is an introduction to a whole new mindset for innovation. We can help you think the way the most creative engineers do. There's 40 years worth of technology sitting and awaiting for individuals with a new kind of problem solving skill. I will share with you the MIT way to solve problems with technology. Many of the ideas I will share with you in these videos and more can be found in my book, *Innovating, A Doer's Manifesto*.
