

Table of insights

It is easy to forget and take for granted the insights generated in the standard method process. The following table helps categorize and present your insights from your projects. You should use this format for the presentation in your break-out session before final week, when you are supposed to mainly discuss the insights you have gained so far.

Insight	Which Step	How	What Area

For each insight that you share, elaborate on three dimensions of the insight:

Which Step- Describe when and in which step of the project this insight came up. The main alternatives include: *variable generation, reference mode, problem definition, causal loop, simulation model, analysis, client interaction*

How- How and in what conditions did the insight come up? E.g. were you interacting with the client or were you analyzing your model? Some alternatives include: *client interaction, reading about the topic, modeling, group discussion*

What Area- Where does this insight apply to? E.g. is it about the content of the client problem, or process of standard method? Some alternatives include: *client problem, System dynamics, standard method, consulting, Strategies (to tackle the problem)*

Feel free to use other alternative options for any of the dimensions, if the ones given do not represent your insights well.

Example:

Insight	Which Step	How	What Area
It is hard to analyze a big model without understanding the smaller pieces	Analysis	Modeling	System Dynamics
