Areas and Determinants

1. Compute $\begin{vmatrix} 6 & 5 \\ 1 & 2 \end{vmatrix}$. <u>Answer:</u> $\begin{vmatrix} 6 & 5 \\ 1 & 2 \end{vmatrix} = 6 \cdot 2 - 5 \cdot 1 = 7.$

2. Compute the area of the parallelogram shown.

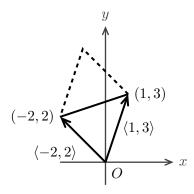

Answer: The area is given by the determinant of the vectors determining the parallelogram.

Area = $\left|\det(\mathbf{A}, \mathbf{B})\right| = \left|\det\begin{pmatrix}1 & 3\\-2 & 2\end{pmatrix}\right| = 2 + 6 = 8.$

3. Find the area of the triangle with vertices (0,0), (-2,2) and (1,3).

<u>Answer</u>: The triangle is half a parallelogram. So the area is $\frac{1}{2} \left| \det \begin{pmatrix} 1 & 3 \\ -2 & 2 \end{pmatrix} \right| = 2.$
