

# 2.43 Advanced Thermodynamics

MIT - Spring2024 - Gian Paolo Beretta

References format: LL<sup>v</sup>sSS = slide #SS of lecture #LL.

Hyperlinks: **s** takes you to the slide; **v** to the video.<sup>‡</sup>

<sup>‡</sup>To have your computer or smartphone open the target PDF files at the proper page, you may have to change the default settings. For example:

- In PC **Chrome**: Settings → Privacy and Security → Site Settings → PDF documents, and choose to open PDFs in Chrome.
- In PC **Firefox**: Preferences → General → Applications → Portable Document Format (PDF), and select “Open in Firefox”.
- In some Android smartphones, download the **Firefox** app, then: Settings → Applications → Firefox → “Set as Default”, and choose Firefox.

## Abstracts of Lecture Contents

with **Hyperlinks** to **Slides** and **Video Timestamps**

<b>Lecture 01: Definitions of System, Property, State, Weight Process; First Law and Energy</b> .....	01 <sup>v</sup> s01
In 2024 Thermodynamics Turns 200 Years Old! .....	01 <sup>v</sup> s02
Some Pioneers of Thermodynamics .....	01 <sup>v</sup> s03
Reference Books by MIT-MechE Members of the “Keenan School” .....	01 <sup>v</sup> s04
Course Outline - Part I: Concise Review of Basic Concepts and Definitions .....	01 <sup>v</sup> s05
Course Outline - Part II: Chemical Potentials and Multicomponent Equilibria .....	01 <sup>v</sup> s06
Course Outline - Part III: Nonequilibrium States and Irreversible Processes in Continua .....	01 <sup>v</sup> s07
Course Outline - Grading Policy .....	01 <sup>v</sup> s08
<b>Introduction to Part I: Concise Review of Basic Concepts and Definitions</b> .....	01 <sup>v</sup> s09
The Loaded Meaning of the Word System .....	01 <sup>v</sup> s10
The Loaded Meaning of the Word Property .....	01 <sup>v</sup> s11
What Exactly Do We Mean by the Word State (of a System) .....	01 <sup>v</sup> s12
What Do We Mean by General Laws of Time Evolution .....	01 <sup>v</sup> s13
Time Evolution, Interactions, and the Concept of Process .....	01 <sup>v</sup> s14
Definition of Weight Process .....	01 <sup>v</sup> s15
Statement of the First Law of Thermodynamics .....	01 <sup>v</sup> s17
Main Consequence of the First Law: Definition of Property Energy .....	01 <sup>v</sup> s18
Consequences of the First Law: Additivity and Conservation of Energy .....	01 <sup>v</sup> s19
Consequences of the First Law: Exchangeability of Energy via Interactions .....	01 <sup>v</sup> s20
Consequences of the First Law: Energy Balance Equation .....	01 <sup>v</sup> s21
States Can Be Steady/Unsteady or Equilibrium/Nonequilibrium .....	01 <sup>v</sup> s23
Equilibrium States Can Be Unstable/Metastable/Stable .....	01 <sup>v</sup> s24
Hatsopoulos-Keenan Statement of the Second Law of Thermodynamics .....	01 <sup>v</sup> s25
<b>Lecture 02: Second Law and Entropy; Adiabatic Availability; Maximum Entropy Principle</b> .....	02 <sup>v</sup> s01
Quick Review: Course Objectives: Part I .....	02 <sup>v</sup> s02
Quick Review: The Loaded Meaning of the Word System .....	02 <sup>v</sup> s04
Quick Review: The Loaded Meaning of the Word Property .....	02 <sup>v</sup> s05

Quick Review: What Exactly Do We Mean by the Word State (of a System) .....	02 <sub>s</sub> 06
Quick Review: What Do We Mean by General Laws of Time Evolution .....	02 <sub>s</sub> 07
Quick Review: Time Evolution, Interactions, and the Concept of Process .....	02 <sub>s</sub> 08
Quick Review: Definition of Weight Process .....	02 <sub>s</sub> 09
Quick Review: Main Consequence of the First Law: Definition of Property Energy .....	02 <sub>s</sub> 11
Quick Review: Consequences of the First Law: Energy Balance Equation .....	02 <sub>s</sub> 12
Quick Review: States Can Be Steady/Unsteady or Equilibrium/Nonequilibrium .....	02 <sub>s</sub> 14
Quick Review: Equilibrium States Can Be Unstable/Metastable/Stable .....	02 <sub>s</sub> 15
Quick Review: Hatsopoulos-Keenan Statement of the Second Law of Thermodynamics .....	02 <sub>s</sub> 16
Consequences of First&Second Law: .....	02 <sub>s</sub> 17
First Law and Second Law Together Entail Many Consequences .....	02 <sub>s</sub> 18
Theorem: Kelvin-Planck Statement of the Second Law .....	02 <sub>s</sub> 19
Proof of the Kelvin-Planck Statement of the Second Law .....	02 <sub>s</sub> 20
What Exactly Do We Mean by Reversible Process .....	02 <sub>s</sub> 21
Importance of the Second Part of the Statement of the Second Law of Thermodynamics .....	02 <sub>s</sub> 22
Definition of Property Adiabatic Availability .....	02 <sub>s</sub> 23
Theorem: Criterion for the Reversibility of a Weight Process .....	02 <sub>s</sub> 24
Mutual Equilibrium and Definition of Thermal Reservoir .....	02 <sub>s</sub> 26
Feasibility for Arbitrary States of the Following Reversible Weight Process .....	02 <sub>s</sub> 28
Measurement Procedure Defining the “Constant Temperature of a Thermal Reservoir” .....	02 <sub>s</sub> 29
Definition of Property Entropy .....	02 <sub>s</sub> 32
Definition of Available Energy w.r.to a Thermal Reservoir .....	02 <sub>s</sub> 33
Engineering Meaning of Entropy .....	02 <sub>s</sub> 34
Additivity of Entropy and Impossibility of Entropy Decrease in a Weight Process .....	02 <sub>s</sub> 35
Criteria for the Reversibility of a Weight Process .....	02 <sub>s</sub> 36
Exchangeability of Entropy via Interactions .....	02 <sub>s</sub> 37
Entropy Balance Equation .....	02 <sub>s</sub> 38
Maximum Entropy Principle .....	02 <sub>s</sub> 39
Minimum Energy Principle (Except for Special Systems) .....	02 <sub>s</sub> 40
(Stable Equilibrium) State Principle and Fundamental Relation .....	02 <sub>s</sub> 41
Partial Derivatives of the Fundamental Relation .....	02 <sub>s</sub> 42
<b>Lecture 03: Energy vs Entropy Diagrams to Represent Equilibrium and Nonequilibrium States .....</b>	<b>03<sub>s</sub>01</b>
Quick Review: Definition of Property Energy .....	03 <sub>s</sub> 02
Quick Review: Energy Balance Equation .....	03 <sub>s</sub> 03
Quick Review: Second Law of Thermodynamics .....	03 <sub>s</sub> 04
Quick Review: Definition of the “Constant Temperature of a Thermal Reservoir” .....	03 <sub>s</sub> 05
Quick Review: Definition of Property Entropy .....	03 <sub>s</sub> 06
Quick Review: Engineering Meaning of Entropy .....	03 <sub>s</sub> 07
Criteria for the Reversibility of a Weight Process .....	03 <sub>s</sub> 08
Quick Review: Entropy Balance Equation .....	03 <sub>s</sub> 09
Quick Review: Maximum Entropy Principle .....	03 <sub>s</sub> 10
Quick Review: Stable Equilibrium State Principle and Fundamental Relation for the Stable Equilibrium States .....	03 <sub>s</sub> 11
Quick Review: Partial Derivatives of the Fundamental Relation; Gibbs Relation .....	03 <sub>s</sub> 13

Temperature, Pressure, and Chemical Potentials .....	03 <sup>V</sup> <sub>S</sub> 14
Consequences of the Maximum Entropy Principle: Necessary Conditions for Mutual Equilibrium .....	03 <sup>V</sup> <sub>S</sub> 15
Graphical Representation of Basic Concepts on Energy vs Entropy Diagrams .....	03 <sup>V</sup> <sub>S</sub> 16
Projection of the State Space on the Energy–Entropy Plane .....	03 <sup>V</sup> <sub>S</sub> 17
Energy vs Entropy Diagrams: Representation of Non-Stable-Equilibrium States and Stable Equilibrium States .....	03 <sup>V</sup> <sub>S</sub> 18
Energy vs Entropy Diagrams: Special Systems with Upper Bounded Energy .....	03 <sup>V</sup> <sub>S</sub> 19
Quick Review: Definition of Property Adiabatic Availability .....	03 <sup>V</sup> <sub>S</sub> 20
Energy vs Entropy Diagrams: Adiabatic Availability of Non-Stable-Equilibrium States .....	03 <sup>V</sup> <sub>S</sub> 21
Quick Review: Mutual Equilibrium and Definition of Thermal Reservoir .....	03 <sup>V</sup> <sub>S</sub> 22
Energy vs Entropy Diagrams: Non-Stable-Equilibrium and Stable Equilibrium States of a Thermal Reservoir .....	03 <sup>V</sup> <sub>S</sub> 23
Quick Review: Definition of Available Energy w.r.to a Thermal Reservoir .....	03 <sup>V</sup> <sub>S</sub> 24
Energy vs Entropy Diagrams: Available Energy with respect to a Thermal Reservoir .....	03 <sup>V</sup> <sub>S</sub> 25
Energy vs Entropy Diagrams: a System in a Stable Equilibrium State Cannot Release Energy Unless... Nor Receive Entropy Unless... .....	03 <sup>V</sup> <sub>S</sub> 26
<b>Lecture 04: Temperature, Pressure, Chemical Potentials; Clausius Statement of the Second Law .....</b>	<b>04<sup>V</sup><sub>S</sub>01</b>
Quick Review: Energy vs Entropy Diagrams: Representation of Non-Stable-Equilibrium States and Stable Equilibrium States .....	04 <sup>V</sup> <sub>S</sub> 02
Quick Review: Energy vs Entropy Diagrams: Adiabatic Availability of Non-Stable-Equilibrium States .....	04 <sup>V</sup> <sub>S</sub> 03
Quick Review: Energy vs Entropy Diagrams: Non-Stable-Equilibrium and Stable Equilibrium States of a Thermal Reservoir .....	04 <sup>V</sup> <sub>S</sub> 04
Quick Review: Energy vs Entropy Diagrams: Available Energy with respect to a Thermal Reservoir .....	04 <sup>V</sup> <sub>S</sub> 05
Quick Review: Energy vs Entropy Diagrams: a System in a Stable Equilibrium State Cannot Release Energy Unless... Nor Receive Entropy Unless... .....	04 <sup>V</sup> <sub>S</sub> 06
Consequences of the Maximum Entropy Principle .....	04 <sup>V</sup> <sub>S</sub> 07
Necessary Conditions for Mutual Equilibrium .....	04 <sup>V</sup> <sub>S</sub> 08
Proof of Temperature and Pressure Equality at Mutual Equilibrium .....	04 <sup>V</sup> <sub>S</sub> 09
Proof of Temperature and Potential Equality at Mutual Equilibrium .....	04 <sup>V</sup> <sub>S</sub> 12
Concavity of the Fundamental Relation .....	04 <sup>V</sup> <sub>S</sub> 15
Surface Tension and Young-Laplace Equation .....	04 <sup>V</sup> <sub>S</sub> 16
Principal Radii of Curvature .....	04 <sup>V</sup> <sub>S</sub> 20
Principal Radii of Curvature and Area-to-Volume Change upon Surface Displacement .....	04 <sup>V</sup> <sub>S</sub> 21
Nonwork Interactions .....	04 <sup>V</sup> <sub>S</sub> 23
Proof of Clausius Statement of the Second Law .....	04 <sup>V</sup> <sub>S</sub> 24
Graphical Proof of Clausius Inequality (Infinitesimal Transfers) .....	04 <sup>V</sup> <sub>S</sub> 28
Graphical Proof of a More Precise Clausius Inequality Valid for Finite Transfers of Energy and Entropy .....	04 <sup>V</sup> <sub>S</sub> 29
<b>Lecture 05: Definition of Heat Interaction; First and Second Law Efficiencies .....</b>	<b>05<sup>V</sup><sub>S</sub>01</b>
Quick Review: a More Precise Clausius Inequality Valid for Finite Transfers of Energy and Entropy .....	05 <sup>V</sup> <sub>S</sub> 02
Types of Interactions that Exchange Energy Between System .....	05 <sup>V</sup> <sub>S</sub> 03
Definition of Work Interaction .....	05 <sup>V</sup> <sub>S</sub> 04
Definition of Non-Work Interaction .....	05 <sup>V</sup> <sub>S</sub> 05
Definition of Heat Interaction: when the Energy Exchanged Entirely Distinguishable from Work .....	05 <sup>V</sup> <sub>S</sub> 06
Heat Interactions: Is the Definition of Heat Compatible with the Notions We Learn in Heat Transfer .....	05 <sup>V</sup> <sub>S</sub> 07
Heat Interactions: Steady State Heat Transfer Requires Non-Equilibrium .....	05 <sup>V</sup> <sub>S</sub> 08
Energy and Entropy Exchanges Between Two Reservoirs: Clausius Inequalities Impose Irreversibilities in at Least One of	

Them .....	05 <sub>s</sub> 11
Energy and Entropy Exchanges Between Two Reservoirs: Interposing a Third System Makes Reversibility Possible .....	05 <sub>s</sub> 12
Heat Engine Between Two Thermal Reservoirs .....	05 <sub>s</sub> 13
Refrigerator Between Two Thermal Reservoirs .....	05 <sub>s</sub> 14
Heat Pump Between Two Thermal Reservoirs .....	05 <sub>s</sub> 15
Experimental Measurement of Stable-Equilibrium Properties .....	05 <sub>s</sub> 16
Thermometer .....	05 <sub>s</sub> 17
Manometer .....	05 <sub>s</sub> 18
Pressure vs Force per Unit Area .....	05 <sub>s</sub> 19
Heat Capacities .....	05 <sub>s</sub> 20
Enthalpy and Heat Capacity at Constant Pressure .....	05 <sub>s</sub> 21
Heat Capacity at Constant Volume and Equation of State .....	05 <sub>s</sub> 22
Equation of State, Coefficients of Isobaric Expansion and Isothermal Compressibility .....	05 <sub>s</sub> 23
Mayer Relation, Joule-Thomson Coefficient, Sound Speed, Etc .....	05 <sub>s</sub> 24
Gibbs Free Energy and Chemical Potentials as Functions of Temperature and Pressure .....	05 <sub>s</sub> 25
Partial Pressures and Chemical Potentials .....	05 <sub>s</sub> 26
Summary of Properties .....	05 <sub>s</sub> 27
Construction of the Fundamental Relation from Measurements of $T$ , $p$ , $\alpha_p$ , $\kappa_T$ , $C_P$ , and $\mu_i$ 's (Through $p_{ii}$ 's) .....	05 <sub>s</sub> 28
Changing Variables of the Fundamental Relation by Means Legendre Transform .....	05 <sub>s</sub> 30
<b>Lecture 06: Free Energies, Available Energies, and Stability Conditions .....</b>	<b>06<sub>s</sub>01</b>
Quick Review: Definition of Heat Interaction: When the Energy Exchanged Entirely Distinguishable from Work .....	06 <sub>s</sub> 02
Quick Review: Compatibility of Our Definition of Heat with the Notions We Learn in Heat Transfer .....	06 <sub>s</sub> 03
Quick Review: Steady State Heat Transfer Requires Non-Equilibrium .....	06 <sub>s</sub> 04
Principle of Entropy Nondecrease in Weight Processes: Temperature (or $-1/T$ ) as Escaping Tendency for Energy. Pressure as Capturing Tendency for Volume .....	06 <sub>s</sub> 05
Principle of Entropy Nondecrease in Weight Processes: Temperature (or $-1/T$ ) as Escaping Tendency for Energy. Chemical Potentials as Escaping Tendencies for Constituents .....	06 <sub>s</sub> 06
Quick Review: Experimental Measurement of Stable-Equilibrium Properties .....	06 <sub>s</sub> 07
Quick Review: Thermometer .....	06 <sub>s</sub> 08
Quick Review: Manometer .....	06 <sub>s</sub> 09
Quick Review: Partial Pressures and Chemical Potentials .....	06 <sub>s</sub> 10
Quick Review: Construction of the Fundamental Relation from Measurements of $T$ , $p$ , $\alpha_p$ , $\kappa_T$ , $C_P$ , and $\mu_i$ 's (Through $p_{ii}$ 's) .....	06 <sub>s</sub> 11
Changing Variables of the Fundamental Relation by Means of Legendre Transform .....	06 <sub>s</sub> 13
Characteristic SES Functions from Legendre Transforms of the Fundamental Relation in Energy Form .....	06 <sub>s</sub> 14
Maxwell Relations from $E$ , $F$ (Helmholtz Free Energy), $H$ (Enthalpy), $G$ (Gibbs Free Energy) .....	06 <sub>s</sub> 15
Other Maxwell Relations from $G$ , Partial Entropy and Partial Volume .....	06 <sub>s</sub> 16
Characteristic SES Functions from Legendre Transforms of the Fundamental Relation in Entropy Form .....	06 <sub>s</sub> 17
Maxwell Relations from $S$ , $M$ (Massieu Free Entropy), $J$ (Hortsmann-Planck Free Entropy), $K$ (Euler Free Entropy) ..	06 <sub>s</sub> 18
Availability Functions .....	06 <sub>s</sub> 19
Available Energy with respect to a Thermal Reservoir with Fixed Volume and Amounts .....	06 <sub>s</sub> 20
Stability Conditions Deriving from the Available Energy with respect to a Thermal Reservoir with Fixed Volume and Amounts .....	06 <sub>s</sub> 22
Stability Conditions and LeChatelier-Braun Principle (Part I) .....	06 <sub>s</sub> 25

<b>Lecture 07: Availability Functions and LeChatelier-Braun Principle</b>	07 <sub>s</sub> 01
Quick Review: Changing Variables of the Fundamental Relation by Means Legendre Transform	07 <sub>s</sub> 02
Quick Review: Characteristic SES Functions from Legendre Transforms of the Fundamental Relation in Energy Form	07 <sub>s</sub> 03
Quick Review: Maxwell Relations	07 <sub>s</sub> 04
Manipulations of SES Functions	07 <sub>s</sub> 05
Jacobian Determinants	07 <sub>s</sub> 06
Cyclic Relation	07 <sub>s</sub> 09
Mayer Relation	07 <sub>s</sub> 10
Back to Availability Functions	07 <sub>s</sub> 11
Quick Review: Available Energy with respect to a Thermal Reservoir with Fixed Volume and Amounts	07 <sub>s</sub> 12
Quick Review: Stability Conditions Deriving from the Available Energy with respect to a Thermal Reservoir with Fixed Volume and Amounts	07 <sub>s</sub> 14
Quick Review: Stability Conditions and LeChatelier-Braun Principle	07 <sub>s</sub> 16
Available Energy with respect to a Thermal Reservoir with Variable Volume and Fixed Amounts	07 <sub>s</sub> 17
Stability Conditions Deriving from the Available Energy with respect to Changes in Volume at Fixed Amounts	07 <sub>s</sub> 18
Available Energy with respect to a Thermal Reservoir with Fixed Volume and Variable Amount of Constituent “i”	07 <sub>s</sub> 19
Stability Conditions Deriving from the Available Energy with respect to Changes in Variable Amount of Constituent “i” at Fixed Volume	07 <sub>s</sub> 20
Available Energy with respect to a Thermal Reservoir with Variable Volume and All Amounts	07 <sub>s</sub> 21
Stability Conditions Deriving from the Available Energy with respect to Changes in Volume and Amounts	07 <sub>s</sub> 22
Stability Conditions Deriving from the Available Energy with respect to Changes in the Amounts at Fixed Temperature and Pressure	07 <sub>s</sub> 24
Stability Conditions Deriving from the Available Energy with respect to Changes in Volume and Amounts at Fixed Temperature	07 <sub>s</sub> 25
Quick Review: Stability Conditions and LeChatelier-Braun Principle (Part I)	07 <sub>s</sub> 26
Stability Conditions and LeChatelier-Braun Principle (More General Statement)	07 <sub>s</sub> 27
Stability Conditions and LeChatelier-Braun Principle (Example: Air Springs)	07 <sub>s</sub> 30
<b>Lecture 08: Few versus Many Particles: Euler Relation; Review of Various Forms of Exergy (Part I)</b>	08 <sub>s</sub> 01
Quick Review: Stability Conditions and LeChatelier-Braun Principle (General Statement)	08 <sub>s</sub> 02
Large versus Small Systems: Introducing the “Simple-System Model” (Macroscopic Limit) (Many-Particle Limit)	08 <sub>s</sub> 07
Microscopic & Mesoscopic vs Macroscopic: Rarefaction Effects Near Walls at Stable Equilibrium	08 <sub>s</sub> 08
Simple-System Model Assumes Negligible Effect of Inserting and Removing Partitions	08 <sub>s</sub> 13
Simple-System Model: Limiting Assumption about the Fundamental SES Relation	08 <sub>s</sub> 14
Simple-System Model: Proof of the Euler Relation	08 <sub>s</sub> 15
Simple-System Model: Main Consequence of the Euler Relation	08 <sub>s</sub> 16
Bulk Flow States and Bulk Flow Interactions	08 <sub>s</sub> 17
Simple-System Model: Bulk-Flow Local-Equilibrium State Model	08 <sub>s</sub> 18
Bulk Flow Interactions	08 <sub>s</sub> 20
Pulsion Work (and How Enthalpy Gets In)	08 <sub>s</sub> 21
Mass, Energy and Entropy Balances for a System Open to Bulk Flow, Heat, and Work Interactions	08 <sub>s</sub> 25
Exergies and First and Second-Law Efficiencies in Energy Conversion Technologies	08 <sub>s</sub> 27
Exergy Balance for a System Open to Bulk Flow, Heat, and Work Interactions	08 <sub>s</sub> 28
Quick Review: First-Law vs Second-Law Efficiencies for Heat Engines, Refrigerators, and Heat Pumps	08 <sub>s</sub> 29
First-Law Efficiency or COP (Definition)	08 <sub>s</sub> 30

Second-Law Efficiency (Definition) .....	08 <sup>V</sup> <sub>S</sub> 31
Exergy (Generic Definition of the Concept) .....	08 <sup>V</sup> <sub>S</sub> 32
Exergy Associated with Heat Exchange .....	08 <sup>V</sup> <sub>S</sub> 33
Exergy and Second-Law Efficiency in Simple Cogeneration .....	08 <sup>V</sup> <sub>S</sub> 35
<b>Lecture 09: Minimum Work of Partitioning Small Systems; Gibbs' Phase Rule; Van der Waals Model</b> ..	09 <sup>V</sup> <sub>S</sub> 01
Notice: All the Results Reviewed So Far Hold for Large as Well as Small Systems .....	09 <sup>V</sup> <sub>S</sub> 02
Quick Review: Microscopic & Mesoscopic vs Macroscopic: Rarefaction Effects Near Walls at Stable Equilibrium .....	09 <sup>V</sup> <sub>S</sub> 03
Quick Review: Rarefaction Effects Near Walls at Stable Equilibrium Become Negligible for Many Particles .....	09 <sup>V</sup> <sub>S</sub> 04
Quick Review: Simple-System Model Assumes Negligible Effect of Inserting and Removing Partitions .....	09 <sup>V</sup> <sub>S</sub> 05
Quick Review: Simple-System Model: Limiting Assumption about the Fundamental SES Relation .....	09 <sup>V</sup> <sub>S</sub> 06
Quick Review: Simple-System Model: Proof of the Euler Relation .....	09 <sup>V</sup> <sub>S</sub> 07
Quick Review: Simple-System Model: Main Consequence of the Euler Relation .....	09 <sup>V</sup> <sub>S</sub> 08
Small Systems: Specific Properties Depend on the Total Amount of Constituents .....	09 <sup>V</sup> <sub>S</sub> 09
Small Systems: Minimum Work of Partitioning .....	09 <sup>V</sup> <sub>S</sub> 10
Basic Simple-System Models of Stable-Equilibrium Properties of (Macroscopic Amounts of) Pure Substances .....	09 <sup>V</sup> <sub>S</sub> 12
Extensive Properties (Definition) .....	09 <sup>V</sup> <sub>S</sub> 13
Specific Properties (Definition) .....	09 <sup>V</sup> <sub>S</sub> 14
Intensive Properties and Intensive State (Definition) .....	09 <sup>V</sup> <sub>S</sub> 15
Homogeneous vs Heterogeneous Stable Equilibrium States, Phases (Definitions) .....	09 <sup>V</sup> <sub>S</sub> 16
Gibbs' Phase Rule (Proof) .....	09 <sup>V</sup> <sub>S</sub> 17
Gibbs' Phase Rule (Possible Cases for a Pure Substance) .....	09 <sup>V</sup> <sub>S</sub> 18
Construction of the Fundamental Relation of a Pure Substance, within the Simple System Model, from $T, p, \alpha_p, \kappa_T, C_P$ .....	09 <sup>V</sup> <sub>S</sub> 20
Ideal (Perfect) Incompressible Solid or Fluid Model .....	09 <sup>V</sup> <sub>S</sub> 21
Ideal (Perfect) Gas Model .....	09 <sup>V</sup> <sub>S</sub> 22
Clausius-Clapeyron Relation (Two-Phase States of a Pure Substance) .....	09 <sup>V</sup> <sub>S</sub> 24
Properties of Two-Phase Liquid-Vapor States of a Pure Substance .....	09 <sup>V</sup> <sub>S</sub> 25
Graphical Representation of the SES Fundamental Relation Valid within the Simple System Model .....	09 <sup>V</sup> <sub>S</sub> 26
The $U$ - $S$ - $V$ Fundamental Surface (Water) .....	09 <sup>V</sup> <sub>S</sub> 27
The Mollier $H$ - $S$ Diagram (Water) .....	09 <sup>V</sup> <sub>S</sub> 28
The $p$ - $V$ Diagram (Water) .....	09 <sup>V</sup> <sub>S</sub> 29
The $p$ - $V$ Diagram According to the Van der Waals Model (Water) .....	09 <sup>V</sup> <sub>S</sub> 30
Exergies and First- and Second-Law Efficiencies in Energy Conversion Technologies (Continued) .....	09 <sup>V</sup> <sub>S</sub> 31
Exergy and Second-Law Efficiency in Simple Cogeneration .....	09 <sup>V</sup> <sub>S</sub> 32
Exergy of Bulk Flow Interactions .....	09 <sup>V</sup> <sub>S</sub> 33
<b>Lecture 10: Review of Various Forms of Exergy (Part II); Allocation of Consumptions in Cogeneration</b> ..	10 <sup>V</sup> <sub>S</sub> 01
Exergies and First and Second-Law Efficiencies in Energy Conversion Technologies (Continued) .....	10 <sup>V</sup> <sub>S</sub> 02
Quick Review: Exergy of Bulk Flow Interactions .....	10 <sup>V</sup> <sub>S</sub> 03
Exergy in Heating and Cooling Bulk Flows .....	10 <sup>V</sup> <sub>S</sub> 05
Exergy of an Hydraulic Jump .....	10 <sup>V</sup> <sub>S</sub> 07
Exergy in Heating and Cooling Bulk Flows .....	10 <sup>V</sup> <sub>S</sub> 08
Temperature of the Equivalent Heat Interaction in Heating / Cooling for a Liquid Flow .....	10 <sup>V</sup> <sub>S</sub> 10
Temperature of the Equivalent Heat Interaction in Heating / Cooling for an Ideal Gas Flow .....	10 <sup>V</sup> <sub>S</sub> 11
Temperature of the Equivalent Heat Interaction in Heating / Cooling for a Boiling or Condensing Flow .....	10 <sup>V</sup> <sub>S</sub> 12

Minimum Exergy for Low Temperature Heating a Liquid or Ideal-Gas Flow .....	10 <sub>s</sub> 13
Exergy Associated with a Fossil Fuel (Definition) .....	10 <sub>s</sub> 14
Exergy Associated with a Fossil Fuel (in Practice) .....	10 <sub>s</sub> 15
Lower Heating Values of Some Fuels .....	10 <sub>s</sub> 16
The Learning Curve of Fuel-to-Power Conversion Technologies .....	10 <sub>s</sub> 17
Power-Plant Philosophy of Best Available Flame-Based Fuel-to-Power Conversion Technologies .....	10 <sub>s</sub> 20
One Way to Get Around the Inherent Irreversibility of Flames Is by Oxidating the Fuel in Fuel Cells .....	10 <sub>s</sub> 23
Methods for the Allocation of Energy Consumption and CO <sub>2</sub> Production in Combined Heat and Power (CHP) Production and of Heat and/or Power Production in Hybrid Multi-Resource Facilities .....	10 <sub>s</sub> 24
What Fraction of the Fuel Consumed by a Heat-and-Power Cogeneration Facility Should Be Allocated to the Heat Produced? .....	10 <sub>s</sub> 25
Allocation Problem in Heat&Power Cogeneration: Allocation Fractions, Partial Efficiencies, and Primary Energy Savings (PES) .....	10 <sub>s</sub> 26
Allocation Problem in CHP: Incremental Electricity-Centered Allocation .....	10 <sub>s</sub> 28
Allocation Problem in CHP: Separate Production Reference Allocation .....	10 <sub>s</sub> 29
Allocation Problem in CHP: Choice of Reference Efficiencies .....	10 <sub>s</sub> 30
Allocation Problem in CHP: “Fair” Reference Values in a Given Local Area .....	10 <sub>s</sub> 31
Allocation Example in CHP: a Comparison Between Allocation Methods .....	10 <sub>s</sub> 32
What Fraction of the Electrical Energy Produced in a Hybrid Solar-Fossil Power Plant Should Qualify as ‘Renewable Electricity’? .....	10 <sub>s</sub> 38
Allocation Problem in Hybrid Facilities: Allocation Fractions, Partial Efficiencies, and Primary Energy Savings PES ...	10 <sub>s</sub> 39
Allocation Problem in Hybrid Facilities: Incremental Fossil-Centered Allocation .....	10 <sub>s</sub> 41
Allocation Problem in Hybrid Facilities: Separate Production Reference Allocation .....	10 <sub>s</sub> 42
Allocation Problem in Hybrid Facilities: Choice of Reference Efficiencies .....	10 <sub>s</sub> 43
<b>Lecture 11: Allocation in Hybrid Power Production; Chemical Potentials and Partial Pressures .....</b>	<b>11<sub>s</sub>01</b>
Quick Review: Exergy in Heating and Cooling Bulk Flows .....	11 <sub>s</sub> 03
Quick Review: Minimum Exergy for Low Temperature Heating a Liquid or Ideal-Gas Flow .....	11 <sub>s</sub> 04
Quick Review: Power-Plant Philosophy of Best Available Flame-Based Fuel-to-Power Conversion Technology .....	11 <sub>s</sub> 05
Quick Review: One Way to Get Around the Inherent Irreversibility of Flames Is by Oxidating the Fuel in Fuel Cells ...	11 <sub>s</sub> 06
Typical (Efficient and Inefficient) Uses of Fossil Fuels .....	11 <sub>s</sub> 07
Quick Review: Methods for the Allocation of Energy Consumption and CO <sub>2</sub> Production in Combined Heat and Power (CHP) Production and of Heat and/or Power Production in Hybrid Multi-Resource Facilities .....	11 <sub>s</sub> 16
Quick Review: Allocation Problem in Heat&Power Cogeneration: Allocation Fractions, Partial Efficiencies, and Primary Energy Savings (PES) .....	11 <sub>s</sub> 17
Quick Review: Allocation Problem in CHP: Incremental Electricity-Centered Allocation .....	11 <sub>s</sub> 18
Quick Review: Allocation Problem in CHP: Separate Production Reference Allocation .....	11 <sub>s</sub> 19
Quick Review: Allocation Problem in CHP: Choice of Reference Efficiencies .....	11 <sub>s</sub> 20
Quick Review: Allocation Problem in CHP: “Fair” Reference Values in a Given Local Area .....	11 <sub>s</sub> 21
Quick Review: Allocation Example in CHP: a Comparison Between Allocation Methods .....	11 <sub>s</sub> 22
Quick Review: Allocation Problem in Hybrid Facilities: Allocation Fractions, Partial Efficiencies, and Primary Energy Savings PES .....	11 <sub>s</sub> 23
Quick Review: Allocation Problem in Hybrid Facilities: Incremental Fossil-Centered Allocation .....	11 <sub>s</sub> 24
Quick Review: Allocation Problem in Hybrid Facilities: Separate Production Reference Allocation .....	11 <sub>s</sub> 25
Quick Review: Allocation Problem in Hybrid Facilities: Choice of Reference Efficiencies .....	11 <sub>s</sub> 26
Quick Review: Allocation Problem in Hybrid Facilities: “Fair” Reference Values in a Given Local Area .....	11 <sub>s</sub> 27

Quick Review: Allocation Example in Hybrid Facilities: a Comparison Between Allocation Methods .....	11 <sup>v</sup> <sub>s</sub> 28
<b>Introduction to Part II: Chemical Potentials and Multicomponent Equilibria</b> .....	11 <sup>v</sup> <sub>s</sub> 29
Stable-Equilibrium Properties of Mixtures (within the Simple-System Model) .....	11 <sup>v</sup> <sub>s</sub> 30
(Small Systems) (Mixtures) Specific Properties in General Depend on $n$ ... ..	11 <sup>v</sup> <sub>s</sub> 31
(Large $n$ Limit: Simple-System Approximation) (Mixtures) ... but that Dependence Vanishes for Large $n$ ... ..	11 <sup>v</sup> <sub>s</sub> 32
(Small Systems) (Pure Substances) Specific Properties in General Depend on $n$ .....	11 <sup>v</sup> <sub>s</sub> 33
(Large $n$ Limit: Simple-System Approximation) (Pure Substances) ... but that Dependence Vanishes for Large $n$ .....	11 <sup>v</sup> <sub>s</sub> 34
Experimental Measurement of SES Properties of Mixtures: Partial Pressures to Measure Chemical Potentials .....	11 <sup>v</sup> <sub>s</sub> 35
Experimental Measurement of SES Properties of Mixtures: Partial Properties from the Chemical Potentials .....	11 <sup>v</sup> <sub>s</sub> 36
Experimental Measurement of SES Properties of Mixtures: Mixture Properties from the Partial Properties .....	11 <sup>v</sup> <sub>s</sub> 37
<b>Lecture 12: Ideal Mixture Behavior; Work from Reversible Mixing; Entropy of Irreversible Mixing</b> .....	12 <sup>v</sup> <sub>s</sub> 01
Quick Review: Stable-Equilibrium Properties of Mixtures (within the Simple-System Model) .....	12 <sup>v</sup> <sub>s</sub> 02
Quick Review: Experimental Measurement of SES Properties of Mixtures: Partial Properties from the Chemical Potentials .....	12 <sup>v</sup> <sub>s</sub> 03
Quick Review: Experimental Measurement of SES Properties of Mixtures: Mixture Properties from the Partial Properties .....	12 <sup>v</sup> <sub>s</sub> 04
Experimental Measurement of SES Properties of Mixtures: Partial Properties from Properties of Isothermobaric Mixing	12 <sup>v</sup> <sub>s</sub> 05
Experimental Measurement of SES Properties of Mixtures: Example: Enthalpies of Isothermobaric Mixing of Molten Salts .....	12 <sup>v</sup> <sub>s</sub> 06
Experimental Measurement of SES Properties of Mixtures: Example: Volumes of Isothermobaric Mixing of Molten Salts	12 <sup>v</sup> <sub>s</sub> 07
Are Mixture Properties Determined by the Pure-Substance Properties of Its Constituents? Partial Properties in Terms of Partial Pressures and Pure-Substance Properties .....	12 <sup>v</sup> <sub>s</sub> 08
Lennard-Jones Potential (Model of Intermolecular Forces) .....	12 <sup>v</sup> <sub>s</sub> 09
Ideal Gibbs-Dalton Behavior .....	12 <sup>v</sup> <sub>s</sub> 10
Ideal Gibbs-Dalton Mixtures of Ideal Gases .....	12 <sup>v</sup> <sub>s</sub> 12
Isothermobaric Mixing of Ideal Gases. Entropy of Spontaneous Mixing .....	12 <sup>v</sup> <sub>s</sub> 13
Isoentropic Mixing of Ideal Gases. Extracting the Adiabatic Availability of Mixing .....	12 <sup>v</sup> <sub>s</sub> 14
<b>Lecture 13: Gibbs Paradox; Shannon Information Entropy; Single Quantum Particle in a Box</b> .....	13 <sup>v</sup> <sub>s</sub> 01
Quick Review: Stable-Equilibrium Properties of Mixtures (within the Simple-System Model) .....	13 <sup>v</sup> <sub>s</sub> 02
Quick Review: Experimental Measurement of SES Properties of Mixtures: Partial Properties from Properties of Isothermobaric Mixing .....	13 <sup>v</sup> <sub>s</sub> 03
Quick Review: Lennard-Jones Potential (Model of Intermolecular Forces) .....	13 <sup>v</sup> <sub>s</sub> 04
Quick Review: Ideal Gibbs-Dalton Behavior .....	13 <sup>v</sup> <sub>s</sub> 05
Quick Review: Ideal Gibbs-Dalton Mixtures of Ideal Gases .....	13 <sup>v</sup> <sub>s</sub> 06
Quick Review: Isothermobaric Mixing of Ideal Gases. Entropy of Spontaneous Mixing .....	13 <sup>v</sup> <sub>s</sub> 07
Quick Review: Isoentropic Mixing of Ideal Gases. Extracting the Adiabatic Availability of Mixing .....	13 <sup>v</sup> <sub>s</sub> 08
Semipermeable (Passive Transport) vs Selective (Active Transport). Membranes .....	13 <sup>v</sup> <sub>s</sub> 10
Entropy of Spontaneous Mixing (Gibbs Paradox Resolved) .....	13 <sup>v</sup> <sub>s</sub> 11
Information Theory Interpretation: Shannon Information Entropy .....	13 <sup>v</sup> <sub>s</sub> 12
Quantum Model of a Structureless Particle in a Box: Ideal Gas Equation of State for a Single Particle in a Box .....	13 <sup>v</sup> <sub>s</sub> 13
Quantum Models of Particles: Upper Bounded vs Unbounded Energy Spectrum .....	13 <sup>v</sup> <sub>s</sub> 14
Steepest Entropy Ascent Equation of Motion Models the Time Evolution of the State (Probability Distribution) Towards SES .....	13 <sup>v</sup> <sub>s</sub> 15
Ideal Gas Equation of State for a Single Particle in a Box .....	13 <sup>v</sup> <sub>s</sub> 16

Are Mixture Properties Determined by the Pure-Substance Properties of Its Constituents? Ideal Solution Behavior	13 <sup>V</sup> <sub>S</sub> 17
<b>Lecture 14: Ideal Solution Model; Osmotic Pressure; Blue Energy; Minimum Work of Separation</b>	14 <sup>V</sup> <sub>S</sub> 01
Quick Review: Stable-Equilibrium Properties of Mixtures (within the Simple-System Model)	14 <sup>V</sup> <sub>S</sub> 02
Are Mixture Properties Determined by the Pure-Substance Properties of Its Constituents? Ideal Solution Behavior	14 <sup>V</sup> <sub>S</sub> 03
Osmotic Pressure of the Solvent of a Dilute Solution: Van't Hoff Relation	14 <sup>V</sup> <sub>S</sub> 05
Passive Transport Across Biological Membranes. Osmosis in Biology	14 <sup>V</sup> <sub>S</sub> 06
Osmosis in Engineering Applications: Osmotic Pressure of Organic Solvents in Lithium-Ion Batteries	14 <sup>V</sup> <sub>S</sub> 07
An Important Example: Osmotic Pressure of Seawater	14 <sup>V</sup> <sub>S</sub> 08
A Vital Application in Many Countries: Fresh Water Production from Saline Waters. Pressure-Driven Reverse-Osmosis Desalination of Seawater	14 <sup>V</sup> <sub>S</sub> 10
A Potential Renewable Energy Source: Osmotic Power (Blue Energy)	14 <sup>V</sup> <sub>S</sub> 11
Isothermobaric Demixing of Ideal Gas Mixtures or Ideal Solutions: Minimum Work of Complete Separation	14 <sup>V</sup> <sub>S</sub> 13
Isothermobaric Demixing of Ideal Gas Mixtures or Ideal Solutions: Minimum Work of Partial Separation	14 <sup>V</sup> <sub>S</sub> 14
Minimum Works of Complete Separation, Partial Minor Removal, Complete Removal. Isothermobaric Demixing of Atmospheric Air Components	14 <sup>V</sup> <sub>S</sub> 15
Minimum Works of Complete Separation, Partial Minor Removal, Complete Removal. Isothermobaric Demixing of a Liquid Solution	14 <sup>V</sup> <sub>S</sub> 16
Stratification of Ideal Gas and Liquid Mixtures in Gravitational Field	14 <sup>V</sup> <sub>S</sub> 17
<b>Lecture 15: Stratification in Gas and Liquid Mixtures; Liquid-Vapor Spinodal Decomposition</b>	15 <sup>V</sup> <sub>S</sub> 01
Mixing and Separation. Stratification	15 <sup>V</sup> <sub>S</sub> 02
Quick Review: Isothermobaric Mixing of Ideal Gases. Entropy of Spontaneous Mixing	15 <sup>V</sup> <sub>S</sub> 03
Quick Review: Isoentropic Mixing of Ideal Gases. Extracting the Adiabatic Availability of Mixing	15 <sup>V</sup> <sub>S</sub> 04
Quick Review: Isothermobaric Demixing of Ideal Gas Mixtures or Ideal Solutions: Minimum Work of Complete Separation	15 <sup>V</sup> <sub>S</sub> 05
Minimum Work of Complete Separation Illustrated on an Energy vs Entropy Diagram	15 <sup>V</sup> <sub>S</sub> 06
Minimum Work of Complete Separation Achieved by Means of Semipermeable Porous Plugs	15 <sup>V</sup> <sub>S</sub> 07
Stratification of Ideal Gas and Liquid Mixtures in a Uniform Gravitational Field	15 <sup>V</sup> <sub>S</sub> 08
Example: Stratification in the Atmosphere (if We Neglect Turbulent Mixing)	15 <sup>V</sup> <sub>S</sub> 09
Relevance of Mutual Equilibrium Between Ocean and Atmosphere	15 <sup>V</sup> <sub>S</sub> 10
Stratification of Ideal Gas and Liquid Mixtures at Rest Inside a Centrifuge	15 <sup>V</sup> <sub>S</sub> 11
Gas Centrifuges for Uranium Enrichment	15 <sup>V</sup> <sub>S</sub> 12
Stratification of Charge Carriers in a Uniform Electric Field	15 <sup>V</sup> <sub>S</sub> 13
Example: Charge Carriers Concentration in a Charged Capacitor	15 <sup>V</sup> <sub>S</sub> 14
Liquid-Vapor Equilibria in Pure Substances	15 <sup>V</sup> <sub>S</sub> 15
Quick Review: Lennard-Jones Potential (Model of Intermolecular Forces)	15 <sup>V</sup> <sub>S</sub> 16
MD and MC Modeling of Non-Ideal SES Behavior: Lennard-Jones Pure Substance ("Lennardjonesium")	15 <sup>V</sup> <sub>S</sub> 17
Modeling Non-Ideal SES Behavior: Van der Waals Model of Liquid/Vapor SES of Pure Substances	15 <sup>V</sup> <sub>S</sub> 18
Modeling Non-Ideal SES Behavior: Van der Waals Isotherms, Metastable and Unstable States	15 <sup>V</sup> <sub>S</sub> 19
Historical Applications of Subcooled Vapor and Superheated Liquid Metastable States: Wilson Cloud Chamber and Glaser Bubble Chamber	15 <sup>V</sup> <sub>S</sub> 20
Modeling Non-Ideal SES Behavior (Diffuse Interface Numerical Simulations): Liquid-Vapor Spinodal Decomposition of a Van der Waals Fluid	15 <sup>V</sup> <sub>S</sub> 21
<b>Lecture 16: Liquid-Vapor Equilibria in Mixtures; Ideal and Excess Chemical Potentials</b>	16 <sup>V</sup> <sub>S</sub> 01
Liquid-Vapor Equilibria in Ideal Mixtures	16 <sup>V</sup> <sub>S</sub> 02

Raoult's Law .....	16 <sup>v</sup> 03
Principle of Distillation .....	16 <sup>v</sup> 05
Freezing Point Depression and Boiling Point Elevation .....	16 <sup>v</sup> 06
Non-Ideal Mixtures .....	16 <sup>v</sup> 07
Quick Review: Experimental Measurement of SES Properties of Mixtures: Mixture Properties from the Partial Properties .....	16 <sup>v</sup> 08
Modeling Non-Ideal SES Behavior of Mixtures: Duhem-Margules Relation, Excess Mixing Properties .....	16 <sup>v</sup> 09
Modeling Non-Ideal SES Behavior of Mixtures: Simple and Complex Model Relations for Binary Mixtures .....	16 <sup>v</sup> 10
Alternative Traditional Ways to Represent Chemical Potentials: Activities and Activity Coefficients .....	16 <sup>v</sup> 12
Alternative Traditional Ways to Represent Chemical Potentials: Fugacities and Fugacity Coefficients .....	16 <sup>v</sup> 13
Alternative Traditional Ways to Represent Chemical Potentials: Activities for the Margules and Van Laar Models .....	16 <sup>v</sup> 14
Simple Model of Non-Ideal Liquid-Vapor Equilibrium: Liquid-Vapor Equilibrium Modeled with the Van Laar Models ..	16 <sup>v</sup> 15
MD and MC Modeling of Non-Ideal SES Mixture Behavior: Lennard-Jones Binary Mixture .....	16 <sup>v</sup> 17
Liquid-Vapor Equilibria for Non-Ideal Binary Mixtures .....	16 <sup>v</sup> 18
<b>Lecture 17: Liquid-Liquid Spinodal Decomposition; Introduction to Systems with Chemical Reactions ..</b>	<b>17<sup>v</sup>01</b>
Liquid-Vapor Equilibria for Non-Ideal Binary Mixtures .....	17 <sup>v</sup> 02
Henry's Law for Dilute Non-Ideal Solutions .....	17 <sup>v</sup> 04
Modeling Non-Ideal SES Behavior of Mixtures: Careful in Taking Derivatives! .....	17 <sup>v</sup> 06
Non-Ideal SES Behavior of Mixtures: Consequences of the Stability Conditions for a Binary Mixtures .....	17 <sup>v</sup> 07
Non-Ideal SES Behavior of Mixtures: $A < 2$ (Complete Miscibility) .....	17 <sup>v</sup> 08
Non-Ideal SES Behavior of Mixtures: $A > 2$ (Partial Miscibility, Miscibility Gap) .....	17 <sup>v</sup> 09
Solubility Gaps and Limit Curves Arise in Liquid-Liquid (and Solid-Solid) Mixtures that Are Only Partially Miscible Below (or Above) an Upper (Lower) Critical Temperature: Spinodal Decomposition .....	17 <sup>v</sup> 10
Solubility Gaps and Limit Curves Arise in Liquid-Liquid (and Solid-Solid) Mixtures that Are Only Partially Miscible. They Can Produce Metastable Liquid-Liquid Dispersions: "The Ouzo Effect" .....	17 <sup>v</sup> 11
<b>Introduction to Systems with Chemical Reactions .....</b>	<b>17<sup>v</sup>12</b>
Energy and Entropy Balances for Closed and Open Systems with Chemical Reactions .....	17 <sup>v</sup> 13
Notation and Stoichiometry: Proportionality Relations, Reaction Coordinates .....	17 <sup>v</sup> 14
Properties of Reaction .....	17 <sup>v</sup> 15
Enthalpy of Formation of H and H-H Bond Energy, Illustrated on an Enthalpy vs Entropy Diagram .....	17 <sup>v</sup> 16
Van der Waals Forces vs Covalent Bonds .....	17 <sup>v</sup> 17
<b>Lecture 18: Properties of Reaction; Heating Values and Exergy of Fuels; Adiabatic Flame Temperature</b>	<b>18<sup>v</sup>01</b>
Systems with Chemical Reactions .....	18 <sup>v</sup> 02
Quick Review: Energy and Entropy Balances for Closed and Open Systems with Chemical Reactions .....	18 <sup>v</sup> 03
Quick Review: Notation and Stoichiometry: Proportionality Relations, Reaction Coordinates .....	18 <sup>v</sup> 04
Quick Review: Properties of Reaction .....	18 <sup>v</sup> 05
Quick Review: Enthalpy of Formation of H and H-H Bond Energy, Illustrated on an Enthalpy vs Entropy Diagram .....	18 <sup>v</sup> 06
Quick Review: Van der Waals Forces vs Covalent Bonds .....	18 <sup>v</sup> 07
Enthalpy of Formation and Bond Energies .....	18 <sup>v</sup> 08
Properties of Formation and Hess Relation .....	18 <sup>v</sup> 09
What Determines the Direction of Spontaneous Reaction and How Temperature Affects It .....	18 <sup>v</sup> 10
When Is an Isothermobaric Reaction Product- or Reactant-Favored? .....	18 <sup>v</sup> 11
When Is an Isothermal Reaction Product- or Reactant-Favored? .....	18 <sup>v</sup> 14

When Is an Adiabatic Reaction Product- or Reactant-Favored? .....	18 <sub>s</sub> <sup>v</sup> 15
Exergy / Maximum Work Obtainable / Minimum Work Required .....	18 <sub>s</sub> <sup>v</sup> 16
Oxidation of Hydrocarbons .....	18 <sub>s</sub> <sup>v</sup> 17
Properties of the Reaction of Oxidation of Hydrocarbons .....	18 <sub>s</sub> <sup>v</sup> 19
Heating Values of Fuels .....	18 <sub>s</sub> <sup>v</sup> 20
Lower and Higher Heating Values of Fuels .....	18 <sub>s</sub> <sup>v</sup> 21
Heating Value and Exergy of a Fuel / Adiabatic Flame Temperature .....	18 <sub>s</sub> <sup>v</sup> 22
Adiabatic Flame Temperature Calculations .....	18 <sub>s</sub> <sup>v</sup> 23
Adiabatic Flame Temperature and Pressure in a Closed Bomb .....	18 <sub>s</sub> <sup>v</sup> 25
Adiabatic Flame Temperature .....	18 <sub>s</sub> <sup>v</sup> 26
Summary on an Energy vs Entropy Diagram .....	18 <sub>s</sub> <sup>v</sup> 27
Is a Reversible Combustion Possible? .....	18 <sub>s</sub> <sup>v</sup> 28
<b>Lecture 19: Affinity and Nonequilibrium Law of Mass Action; Potential Energy Surface .....</b>	<b>19<sub>s</sub><sup>v</sup>01</b>
Second Law and State Principle for Systems with Chemical Reactions .....	19 <sub>s</sub> <sup>v</sup> 02
Quick Review: Notation and Stoichiometry: Proportionality Relations, Reaction Coordinates .....	19 <sub>s</sub> <sup>v</sup> 03
Hatsopoulos-Keenan Statement of the Second Law of Thermodynamics for Systems with Chemical Reactions .....	19 <sub>s</sub> <sup>v</sup> 04
State Principle and Maximum Entropy Principle for Systems with Chemical Reactions .....	19 <sub>s</sub> <sup>v</sup> 05
Quick Review: Enthalpy of Formation and Bond Energies .....	19 <sub>s</sub> <sup>v</sup> 06
Collisions .....	19 <sub>s</sub> <sup>v</sup> 07
Potential Energy Surface and the Role of the Activated Complex .....	19 <sub>s</sub> <sup>v</sup> 08
Forward and Backward Half-Reactions .....	19 <sub>s</sub> <sup>v</sup> 09
Extension of the Simple System Model + Local Equilibrium Assumption: Turning Reactions “On” and “Off” Does Not Affect the Local Properties .....	19 <sub>s</sub> <sup>v</sup> 10
Extension of the Simple System Model: Family of Partial SES’s and Chemical SES .....	19 <sub>s</sub> <sup>v</sup> 11
Fundamental Relation for Chemical Stable Equilibrium States .....	19 <sub>s</sub> <sup>v</sup> 12
Necessary Condition for Chemical Equilibrium (from the Maximum Entropy Principle) .....	19 <sub>s</sub> <sup>v</sup> 13
Non-Equilibrium Law of Mass Action for Ideal Gibbs-Dalton Gas Mixture .....	19 <sub>s</sub> <sup>v</sup> 14
Non-Equilibrium Law of Mass Action for Ideal Solutions .....	19 <sub>s</sub> <sup>v</sup> 15
Equilibrium Law of Mass Action in Terms of Activities .....	19 <sub>s</sub> <sup>v</sup> 16
Temperature Dependence of the Equilibrium Constants .....	19 <sub>s</sub> <sup>v</sup> 17
Equilibrium Constants from Properties of Formation at STP .....	19 <sub>s</sub> <sup>v</sup> 18
Non-Equilibrium Law of Mass Action for Ideal Gibbs-Dalton Gas Mixture .....	19 <sub>s</sub> <sup>v</sup> 19
Dissociation and NO <sub>x</sub> Formation in Combustion in Internal Combustion Engines .....	19 <sub>s</sub> <sup>v</sup> 20
Detailed Kinetic Mechanism for the Oxidation of Hydrocarbons .....	19 <sub>s</sub> <sup>v</sup> 21
Alternative Derivation of the Chemical Equilibrium Conditions Using the Method of Lagrange Multipliers .....	19 <sub>s</sub> <sup>v</sup> 22
Complete Chemical Equilibrium .....	19 <sub>s</sub> <sup>v</sup> 23
<b>Lecture 20: Chemical Kinetics; Arrhenius Law; Degree of Disequilibrium; Principle of Detailed Balance .....</b>	<b>20<sub>s</sub><sup>v</sup>01</b>
Activated Complex. Extension of the Simple System Model for Large $n$ .....	20 <sub>s</sub> <sup>v</sup> 02
Quick Review: Extension of the Simple System Model + Local Equilibrium Assumption: Turning Reactions “On” and “Off” Does Not Affect the Local Properties .....	20 <sub>s</sub> <sup>v</sup> 03
Quick Review: Extension of the Simple System Model: Family of Partial SES’s and Chemical SES .....	20 <sub>s</sub> <sup>v</sup> 04
Affinities and the Non-Equilibrium Law of Mass Action (for a Gibbs-Dalton Mixture of Ideal Gases) .....	20 <sub>s</sub> <sup>v</sup> 05
Chemical Equilibrium of Self-Ionization of Pure Liquid Water: pH and pOH .....	20 <sub>s</sub> <sup>v</sup> 06

<b>Introduction to Chemical Kinetics</b> .....	20 <sub>s</sub> 07
Potential Energy Surface and the Activated Complex .....	20 <sub>s</sub> 08
Maxwell-Boltzmann Distribution of Velocities at SES Determines the Probability of Collisions with Sufficiently High Kinetic Energy to Be Chemically Effective, After Which SES Is Rapidly Reestablished by Non-Chemical Collisions .....	20 <sub>s</sub> 09
Arrhenius Activation Barrier .....	20 <sub>s</sub> 10
Forward and Backward Reaction Rates Model Based on Collision Probabilities Considerations .....	20 <sub>s</sub> 11
Detailed Kinetic Mechanism for the Oxidation of Hydrocarbons .....	20 <sub>s</sub> 12
Principle of Detailed Balance and Degree of Disequilibrium .....	20 <sub>s</sub> 13
Sign of the Affinity, Direction of Reaction, and Fluctuation Relation .....	20 <sub>s</sub> 14
Forward and Backward Reaction Rates Model Based on Hypothetical Half-Equilibrium Concentrations of the Activated Complex .....	20 <sub>s</sub> 15
Partial Shifting Chemical Equilibrium Assuming Some Reactions Equilibrate Much Faster than the Others .....	20 <sub>s</sub> 16
Nonequilibrium Build Up in Rapid Supersonic Nozzle Expansion of High-Temperature Products of Hydrogen Oxy-Combustion .....	20 <sub>s</sub> 17
Degree of Disequilibrium Build Up in Rapid Supersonic Nozzle Expansion of High-Temperature Products of Hydrogen Oxy-Combustion .....	20 <sub>s</sub> 18
Nonequilibrium Gasdynamic N <sub>2</sub> -CO <sub>2</sub> Infrared Power Laser .....	20 <sub>s</sub> 19
Vibrational Levels of the CO <sub>2</sub> Molecule .....	20 <sub>s</sub> 20
<b>Lecture 21: Introduction to Nonequilibrium Theory; Onsager Reciprocity and Maximum Entropy Production</b> .....	21 <sub>s</sub> 01
<b>Introduction to Part III: Nonequilibrium States and Irreversible Processes in Continua</b> .....	21 <sub>s</sub> 02
Quick Review: Relation Between Rates and Affinities: Far and Near Equilibrium .....	21 <sub>s</sub> 03
Quick Review: Detailed Kinetic Mechanism for the Oxidation of Hydrocarbons .....	21 <sub>s</sub> 04
Relation Between Rates and Affinities: Far and Near Equilibrium .....	21 <sub>s</sub> 05
Linearization of Rate-Affinity (Flux-Force) Relations .....	21 <sub>s</sub> 07
Explicit Relations for the Case of Two Rates and Two Affinities .....	21 <sub>s</sub> 08
Onsager Relations in the Linear Regime as a Consequence of the Principle of Maximum Entropy Production Rate .....	21 <sub>s</sub> 09
Graphical Illustration of the Ziegler Orthogonality Relation .....	21 <sub>s</sub> 10
Onsager Relations and Symmetry of the Thermal Conductivity Tensor .....	21 <sub>s</sub> 14
Familiar Near-Equilibrium, Nonequilibrium States .....	21 <sub>s</sub> 15
Steady-State Heat Flux .....	21 <sub>s</sub> 16
Fourier Law of Thermal Conduction .....	21 <sub>s</sub> 17
Anisotropic Fourier Conduction in 2D; Special Change of Coordinates .....	21 <sub>s</sub> 19
Cattaneo-Vernotte Heat Conduction Equation .....	21 <sub>s</sub> 20
<b>Lecture 22: Definition of “Heat&amp;Diffusion” Interaction; Diffusive and Convective Fluxes</b> .....	22 <sub>s</sub> 01
Nonequilibrium in Heat, Mass, and Charge Transfer; Logic and Ingredients of the Construction .....	22 <sub>s</sub> 02
Parallel Logic in the Construction of Nonequilibrium Theories: Heat Transfer vs Chemical Kinetics .....	22 <sub>s</sub> 03
Ingredients of the General Balance Equations for the Extensive Properties of a Continuum .....	22 <sub>s</sub> 04
Balance Equations for 1D Heat and Mass Transfer .....	22 <sub>s</sub> 05
Rate of Change of a Generic Extensive Property of a Continuum .....	22 <sub>s</sub> 06
Diffusive and Convective Fluxes in Terms of Transport Velocities .....	22 <sub>s</sub> 07
Local Source/Sink Densities Account for the Effects of Collisions, and Short and Long Range Forces .....	22 <sub>s</sub> 09
General Balance Equations for an Extensive Property of a Continuum .....	22 <sub>s</sub> 10
Interrelations Between Alternative Variables Used to Account for Composition, and on the Definition of Barycentric	

Velocity .....	22 <sub>s</sub> 11
Various Extensive Properties for a Continuum .....	22 <sub>s</sub> 12
Continuum Assumption .....	22 <sub>s</sub> 13
Continuum Approximation vs Knudsen Number .....	22 <sub>s</sub> 14
Gibbs-Duhem and Local-Equilibrium Simple-System Bulk-Flow Relations .....	22 <sub>s</sub> 15
Gibbs-Duhem Relation in Terms of Molar and Mass Specific Properties .....	22 <sub>s</sub> 16
Gibbs and Gibbs-Duhem Relation in Terms of Volume Specific Properties .....	22 <sub>s</sub> 17
Generalization of the Concept of Heat Interaction: “Heat&Diffusion” Interaction .....	22 <sub>s</sub> 18
Recall How We Defined “Heat Interactions”... .....	22 <sub>s</sub> 19
... and Proved the Clausius Statement of the Second Law .....	22 <sub>s</sub> 20
Use the Same Logic to Define “Heat&Diffusion Interactions”... .....	22 <sub>s</sub> 21
... and Generalize the Clausius Statement of the Second Law .....	22 <sub>s</sub> 22
Only a Fraction of $\underline{J}_E$ Is $\underline{q}''$ in a “Heat&Diffusion” Interaction .....	22 <sub>s</sub> 23
“Heat&Diffusion” Mode of Interaction Between Adjacent Elements of a Continuum .....	22 <sub>s</sub> 25
<b>Lecture 23: Direct and Cross Effects; General Principles of Entropy Production; the Fourth Law .....</b>	<b>23<sub>s</sub>01</b>
Quick Review: Diffusive and Convective Fluxes in Terms of Transport Velocities .....	23 <sub>s</sub> 02
Quick Review: “Heat&Diffusion” Mode of Interaction Between Adjacent Elements .....	23 <sub>s</sub> 03
General Balance Equations for an Extensive Property of a Continuum .....	23 <sub>s</sub> 04
Nonequilibrium in Heat, Mass, and Charge Transfer: the Extrinsic Relation for the Entropy Production Density in Terms of Fluxes and Forces .....	23 <sub>s</sub> 05
General “Entropic Form” of the Expression for $\sigma$ .....	23 <sub>s</sub> 06
$\sigma$ in Terms of the Measurable Heat Flux $\underline{q}''$ in the Absence of Charge Carriers .....	23 <sub>s</sub> 07
$\sigma$ in Terms of the Measurable Heat Flux $\underline{q}''$ and the Current Density $\underline{I}''$ .....	23 <sub>s</sub> 08
$\sigma$ in Terms of $\underline{q}''$ , $\underline{I}''$ and $\Phi$ : an “Extrinsic Relation” .....	23 <sub>s</sub> 09
$T_o\sigma$ Is the Rate of Exergy Dissipation per Unit Volume .....	23 <sub>s</sub> 10
Force-Flux Shorthand Notation .....	23 <sub>s</sub> 11
Material Resistance to Flux and Forces: “Intrinsic” Relations for $\sigma$ .....	23 <sub>s</sub> 12
Direct Laws (Neglecting Cross Effects) .....	23 <sub>s</sub> 14
Onsager Nonequilibrium Cross Effects and the Curie Symmetry Principle .....	23 <sub>s</sub> 15
Sketch of Onsager’s Original Proof .....	23 <sub>s</sub> 16
Orthogonality Relations Yield Onsager Relations in the Linear Regime as a Consequence of the Principle of Maximum Entropy Production Rate .....	23 <sub>s</sub> 17
Orthogonality Relations in the Nonlinear Regime as a Consequence of the Principle of Maximum Entropy Production Rate .....	23 <sub>s</sub> 18
Material Resistance to Flux and Forces: Steepest Entropy Ascent .....	23 <sub>s</sub> 19
We May Call Fourth Law the Statement of Existence of Metric $\underline{G}$ .....	23 <sub>s</sub> 25
“Not Near but Not Too Far” from SES (so that the Assumed Local Equilibrium Gibbs Relation Still Holds): Force-Flux Relations from Sea (Steepest Entropy Ascent) .....	23 <sub>s</sub> 26
The Fourth Law: Existence for Every State of a Local Nonequilibrium Dissipative Metric $\underline{G}$ .....	23 <sub>s</sub> 27
More on Steepest Entropy Ascent .....	23 <sub>s</sub> 28
Bejan’s “Constructal Law” of Design and Evolution in Nature .....	23 <sub>s</sub> 35
While the State Evolves Towards the Steady State with Minimum Global EP (or the SES), Maximal Local EP Selects the Hydrodynamic Pattern .....	23 <sub>s</sub> 36
While the State Evolves Towards the Steady State with Minimum Global EP (or the SES), Maximal Local EP Selects the Most Efficient Flow Pattern .....	23 <sub>s</sub> 37

Maximal Local EP (SEA) Implies Minimum Global EP at Steady State .....	23 <sup>v</sup> <sub>s</sub> 38
<b>Lecture 24: Relative Diffusion Fluxes; Thermoelectric Effects</b> .....	24 <sup>v</sup> <sub>s</sub> 01
Quick Review: Onsager Nonequilibrium Cross Effects and the Curie Symmetry Principle .....	24 <sup>v</sup> <sub>s</sub> 02
