

# Creating your Research Proposal Presentation

Atissa Banuazizi

Lecturer, Writing Across the Curriculum

13 November 2007

# Overview

---

- Goals and components of the Module 3 Presentation
- Dividing up the presentation
- Delivering the presentation with your partner
- Questions to ask yourselves: organization, slide design, delivery

# Goals for your presentation

---

## How can you make your proposal compelling?

- Convince audience that project is worth doing
- Convince audience that you can do it
  
- Assume that your audience comprises:
  - experts in your topic
  - intelligent non-experts with exposure to your field

Useful tips on creating funding proposals at  
<http://www.wvu.edu/depts/rsp/insideview.pdf>

# Components of the presentation

---

- brief project overview
- sufficient background information for everyone to understand your proposal
- statement of the research problem and goals
- project details and methods
- predicted outcomes if everything goes according to plan and if nothing does
- needed resources to complete the work
- societal impact if all goes well

# Dividing up the presentation: general principles

---

- Each partner should speak roughly the same amount of time
- Audiences will assume change in speakers corresponds to change in topic -- don't confuse them
- Changing speakers can distract audience/slow the talk down -- keep shifts to a minimum
- How you choose to divide the talk depends on the shape of your presentation -- many different options!

# Dividing up the presentation: Option 1 (Down the Middle)

---

## Speaker 1:

- brief project overview
- sufficient background information for everyone to understand your proposal
- statement of the research problem and goals

***division assumes that Part I is roughly as long as Part II***

## Speaker 2:

- project details and methods
- predicted outcomes if everything goes according to plan and if nothing does
- needed resources to complete the work
- societal impact if all goes well

# Dividing up the presentation: Option 2 (The Sandwich)

---

## Speaker 1:

- brief project overview
- sufficient background information for everyone to understand your proposal

*context=bread*

- needed resources to complete the work
- societal impact if all goes well

## Speaker 2:

- statement of the research problem and goals
- project details and method
- predicted outcomes if everything goes according to plan and if nothing does

*experiment nuts & bolts =  
filling*

# Dividing up the presentation: Option 3 (Back and Forth)

---

## Speaker 1:

- brief project overview

*each partner speaks long enough to establish flow*

- project details and methods
- predicted outcomes if everything goes according to plan and if nothing

## Speaker 2:

- sufficient background information for everyone to understand your proposal
- statement of the research problem and goals
- needed resources to complete the work
- societal impact if all goes well

# More options (for specific kinds of projects)

---

- Two discrete research questions OR
- Two discrete methods
  - each partner follows one strand
  - introductory and concluding material each presented by a single partner
- Other possibilities, depending on the particulars of your material

# Help focus the audience's attention on the right speaker

---

- During overview, identify who will speak on what topic
- Review/Preview as you proceed through the talk
  - Articulate transitions explicitly -- “hand off”
- Only one partner “onstage” at a time
  - If you’re not speaking, don’t hover nearby
- Do not interrupt each other

# Rehearse as a team

---

- Note timing of each section and of talk as a whole
- Practice moving into speaking position at transition points
- Will you advance each other's slides?
- Aim for similar speaking styles
  - don't imitate each other, but match your formality levels
- Familiarize yourself with partner's material
- Practice Q&A

# Questions to ask yourselves about organization

---

- Does our talk fit together as a coherent whole?
- Are all sections of the talk adequately developed?
  - Do we have a focused, well-defined hypothesis?
  - Is it clear **what** is going to be done and **how**?
  - Have we realistically articulated the scope of the work?
- Have we omitted extraneous material?
- Will our project fire up an audience's interest?
- What might make this proposal more convincing to a funding body?

# Questions to ask yourselves about slide design

---

- Is everything on the slide readable?
- Are our slides a good balance of text and figures?
- Have we chosen clear, specific titles that express the main point of each slide?
- Is the design/format of our slides consistent, or were they obviously designed by different people?

# Questions to ask yourselves about delivery

---

- Can we get through our whole presentation in 10 minutes?
- Do we know where to position ourselves, and how to coordinate our shifts smoothly?
- Do our speaking styles work well together?
- Are we making the transitions between topics and speakers clear to the audience?

# Questions to ask us?

---
