Intracellular drug delivery: aiding cross presentation of subunit vaccines

Last Time: basic vaccine concepts

Today: Using synthetic biomaterials to enhance cytosolic delivery of molecules

Reading: Wang et al. 'Molecularly engineered poly(ortho ester) microspheres for enhanced delivery of DNA vaccines,' *Nat. Mater*. **3** 190-196 (2004)

Supplementary Reading:

ANNOUNCEMENTS:

Particle-stimulated cross presentation

Please see: Lehner, and Cresswell. *Curr Opin Immunol* 16, 82 (2004).

Graph removed due to copyright restrictions.
Please see: Kovacs-Bankowski et al. *PNAS* 90 (1993): 4942-4946.

INTRACELLULAR DRUG DELIVERY AND VACCINES:

Image removed due to copyright restrictions.
Please see: Vijayanathan, et al. 2002.

ENDOSOMAL ESCAPE:

Enhancing cross presentation
cytosolic delivery of large macromolecules

(1) ‘proton sponge’ effect

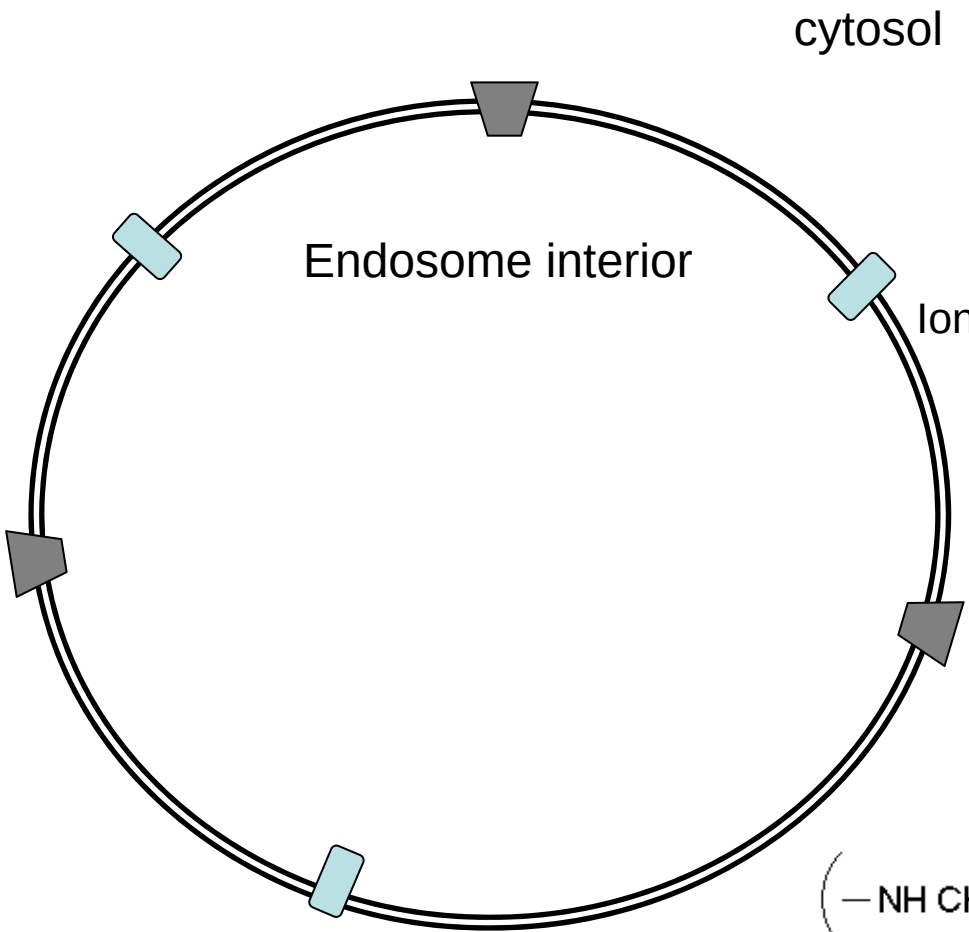
(2) pH-activated polymers
and peptides

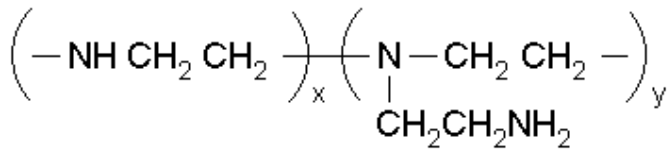
INTRACELLULAR VS. EXTRACELLULAR ENVIRONMENT

Image removed due to copyright restrictions.
Please see: Alberts, Bruce, et al. *Molecular Biology of the Cell*. New York, NY: Garland, 2004.

ENDOSOMAL ESCAPE:
'PROTON SPONGES'

Proton sponge effect





polyethyleneimine

Role of additional structural features of PEI in efficient endosomal escape:

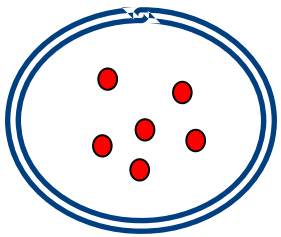
Images removed due to copyright restrictions.
Please see: Dubruel, et al. *Biomacromolecules* 5 (2004): 379-388.

Endosomal escape by direct membrane interactions

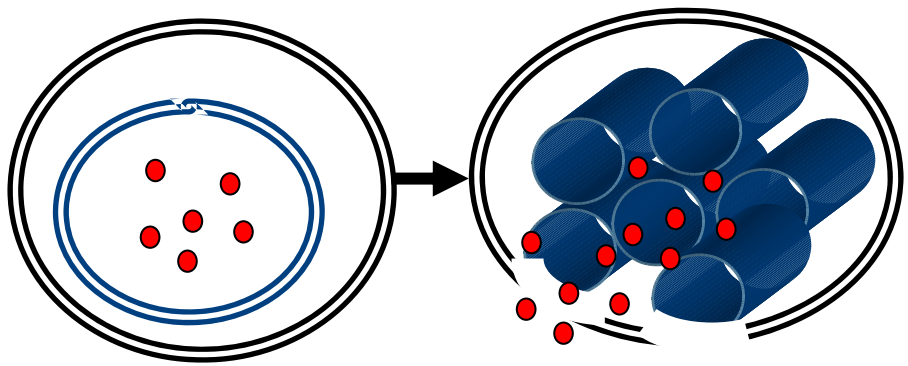
Both polycation and polyanion headgroups with pKas = 5-7 can promote endosomal escape:

Image removed due to copyright restrictions.
Please see: Mann, Stephen. Biomineralization:
Principles and Concepts in Bioinorganic Materials Chemistry.
New York, NY: Oxford University Press, 2001.

pH: **7.4** **5.0**



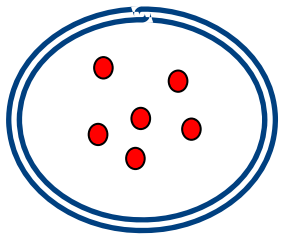
Polyanionic liposome



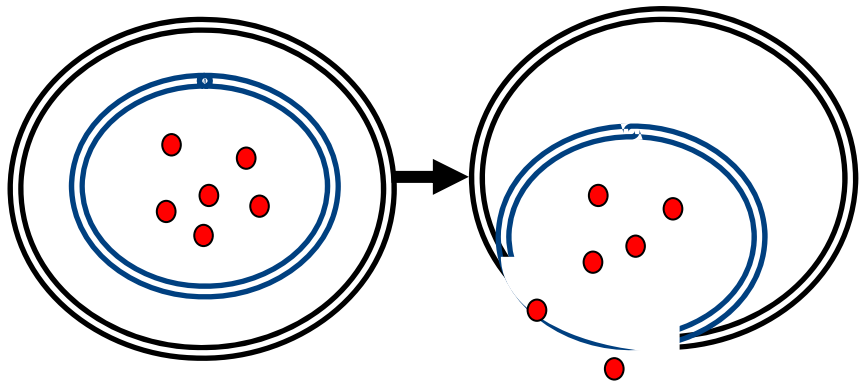
Endosomal escape by direct membrane interactions

Both polycation and polyanion headgroups with pKas = 5-7 can promote endosomal escape:

pH: 7.4 5.0

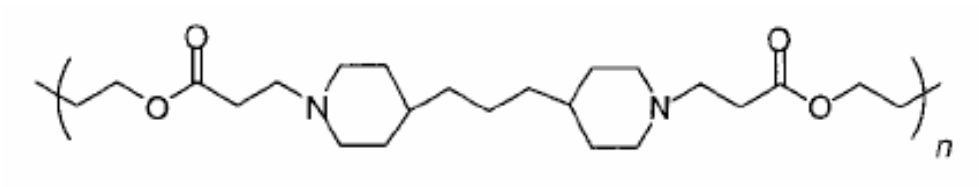


polycationic liposome



ENDOSOMAL ESCAPE:
PH-RESPONSIVE POLYMERS

STRATEGIES FOR CUED ‘BURST’ RELEASE OF CARGO COINCIDENT WITH ENDOSOMAL ESCAPE



Images removed due to copyright restrictions.
Please see: Lynn, Langer, et al. *Angew Chem Int Ed* 40 (2001): 1707.

ENDOSOMAL ESCAPE:
PH-RESPONSIVE POLYMERS

Images and graph removed due to copyright restrictions.
Please see: Little, Langer, et al. *PNAS* 101 (2004): 9534-9539.

ENDOSOMAL ESCAPE:
PH-RESPONSIVE POLYMERS

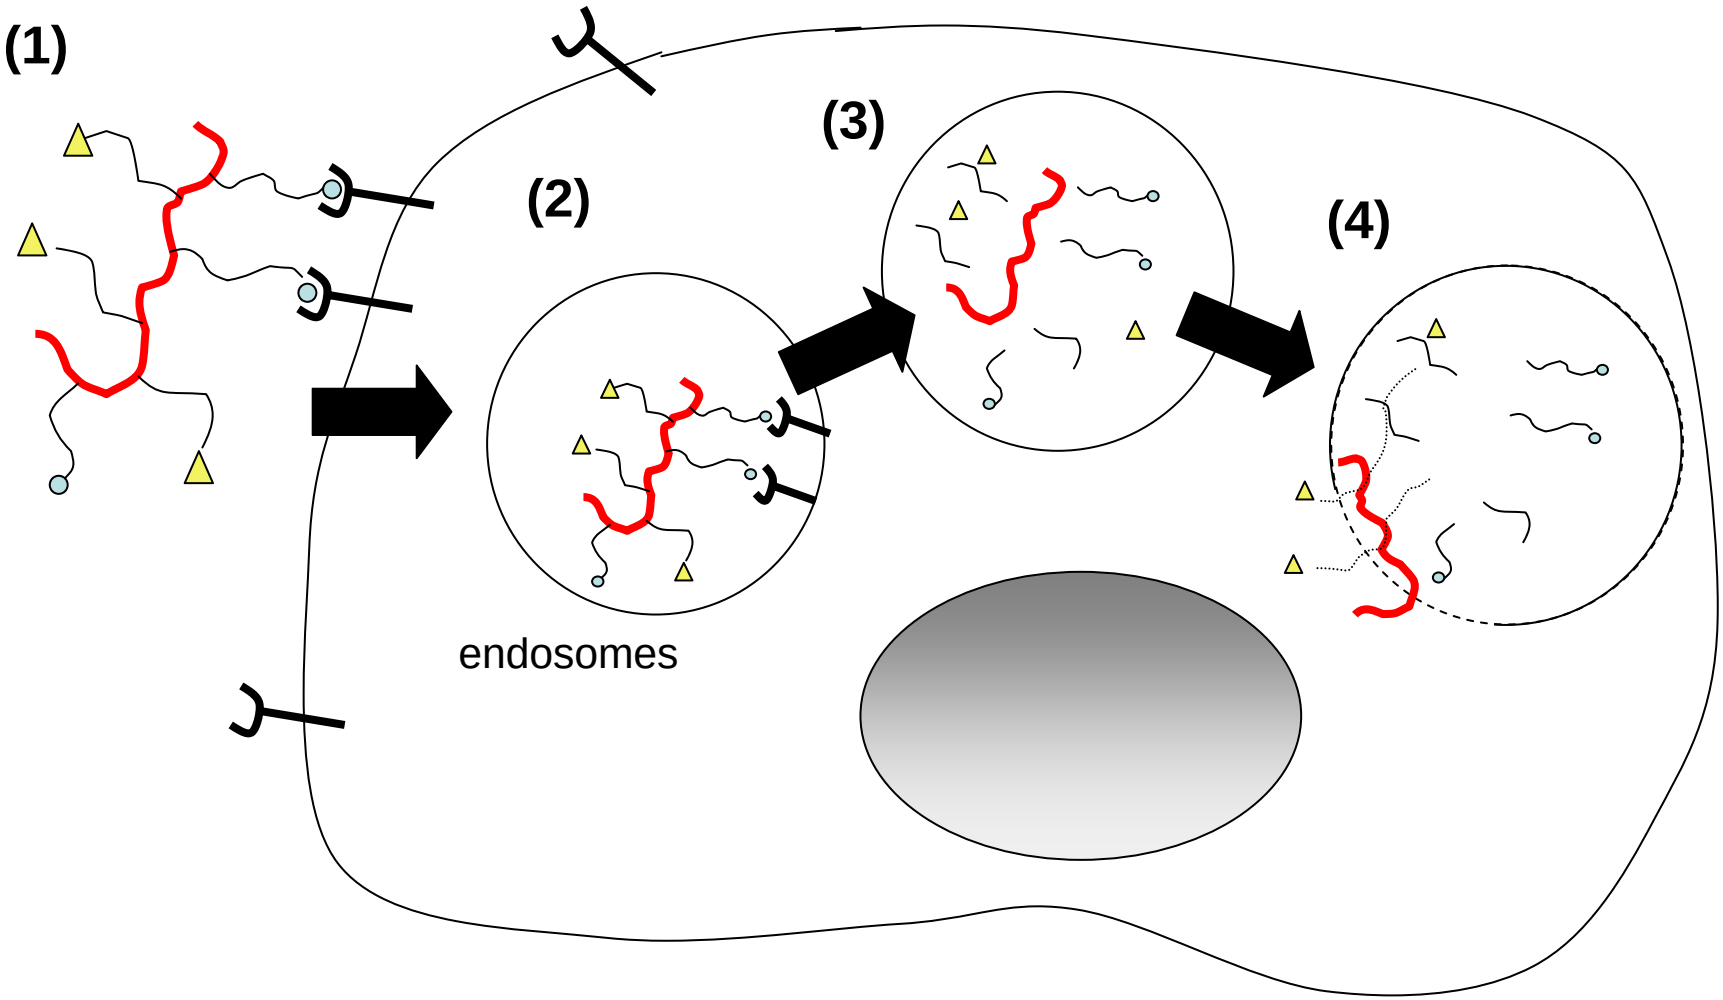
Approaches to endosome escape: 'encrypted' polymers

Multi-function molecular carriers:

Figure removed due to copyright restrictions.

Please see: Figure 1 in Murthy, N. et al. "Bioinspired pH-Responsive Polymers for the Intracellular Delivery of Biomolecular Drugs." *Bioconjug Chem* 14 (2003): 412-9.

ENDOSOMAL ESCAPE:
PH-RESPONSIVE POLYMERS



ENDOSOMAL ESCAPE:
PH-RESPONSIVE POLYMERS

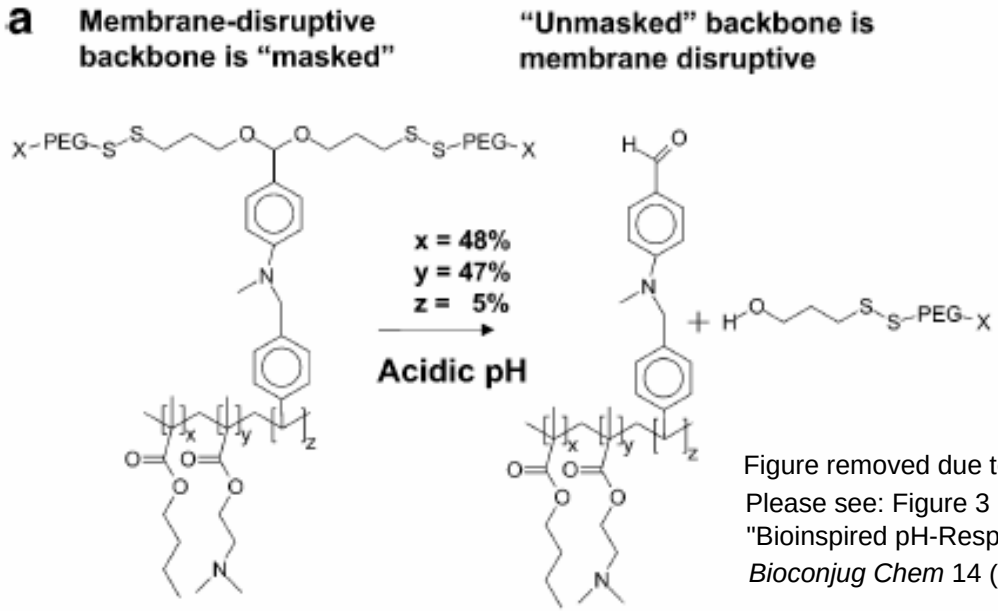


Figure removed due to copyright restrictions.
Please see: Figure 3 in Murthy, N. et al.
"Bioinspired pH-Responsive Polymers for the Intracellular Delivery of Biomolecular Drugs."
Bioconjug Chem 14 (2003): 412-9.

Polymer E1: X = Methoxy
Polymer E2: X = Lysine$_3$-Mannose$_3$

Results with peptide delivery by encrypted polymers

Figure removed due to copyright restrictions.

ENDOSOMAL ESCAPE:
PH-RESPONSIVE POLYMERS

Example vaccine results: pH-responsive gels as vaccines

Images removed due to copyright restrictions.
Please see: Murthy, Frechet, et al. *PNAS* 100 (2003): 4995-5000.

ENDOSOMAL ESCAPE:
PH-RESPONSIVE POLYMERS

Example vaccine results: pH-responsive gels as vaccines
