Criteria

1. Builds geometry (generative)
2. Builds geometries at different scales
3. Generative constraints are based on the materials library
4. Designs assemblies between defined geometries
5. Accounts for tolerances between parts
6. Prepares geometries for a particular machine

1. Builds geometry (generative)
2. Generative base is from material
3. Designs assemblies between defined geometries
4. Prepares geometries for a particular machine

Motivation

- Houses of one material Plywood or OSB (oriented structural board) 4’ x 8’ x ¾”
- Friction fit connections
- Computer program to generate the files for CAD CAM fabrication based on shape rules
- Can be built anywhere with or without insulation
- Manufacturing Waste can be recycled
