

A close-up photograph of several orange 3D printed structural beams. The beams are arranged in a complex, overlapping pattern, with one beam crossing over another. The focus is sharp on the central joint where two beams meet, showing the texture of the printed material and the precision of the fit. The background is dark, making the bright orange beams stand out.

Fabware:

Thinking about design software in support of an
age of Digital Making

New software focused on fabrication for creative exploration
(Research)

Digital Fabrication Process

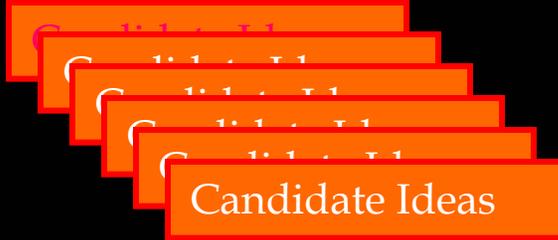

Fabware

Criteria

1. Builds geometry (generative)
2. Builds geometries at different scales
3. Generative constraints are based on the materials library
4. Designs assemblies between defined geometries
5. Accounts for tolerances between parts
6. Prepares geometries for a particular machine

*"We can hardly expect to be able to make machines do wonders before
we find how to make them do ordinary, sensible things"*

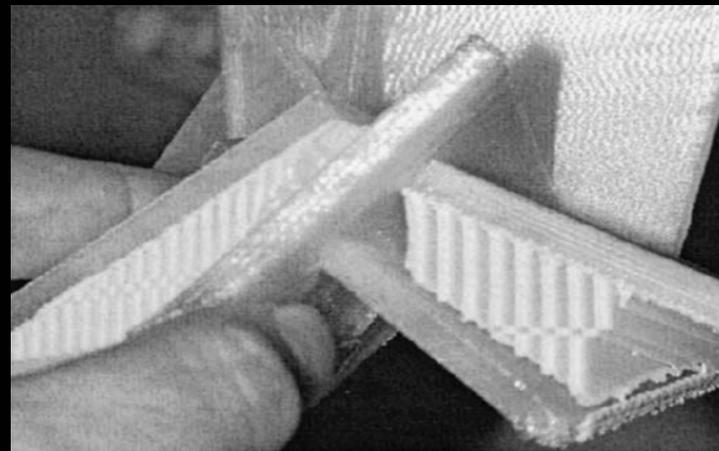

*Minsky
1986*

Background

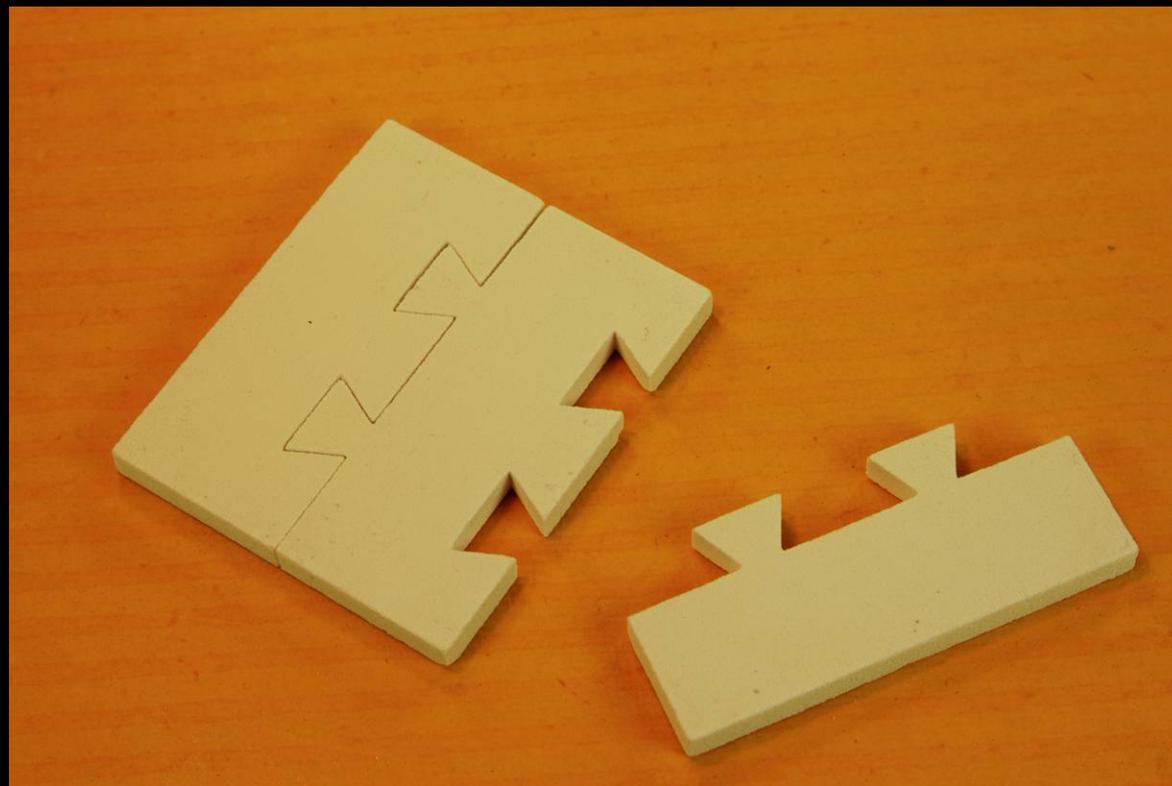

Wang, Yufei, and José Pinto Duarte. 2002. Automatic generation and fabrication of designs. *Automation in construction* 11: 291–302.

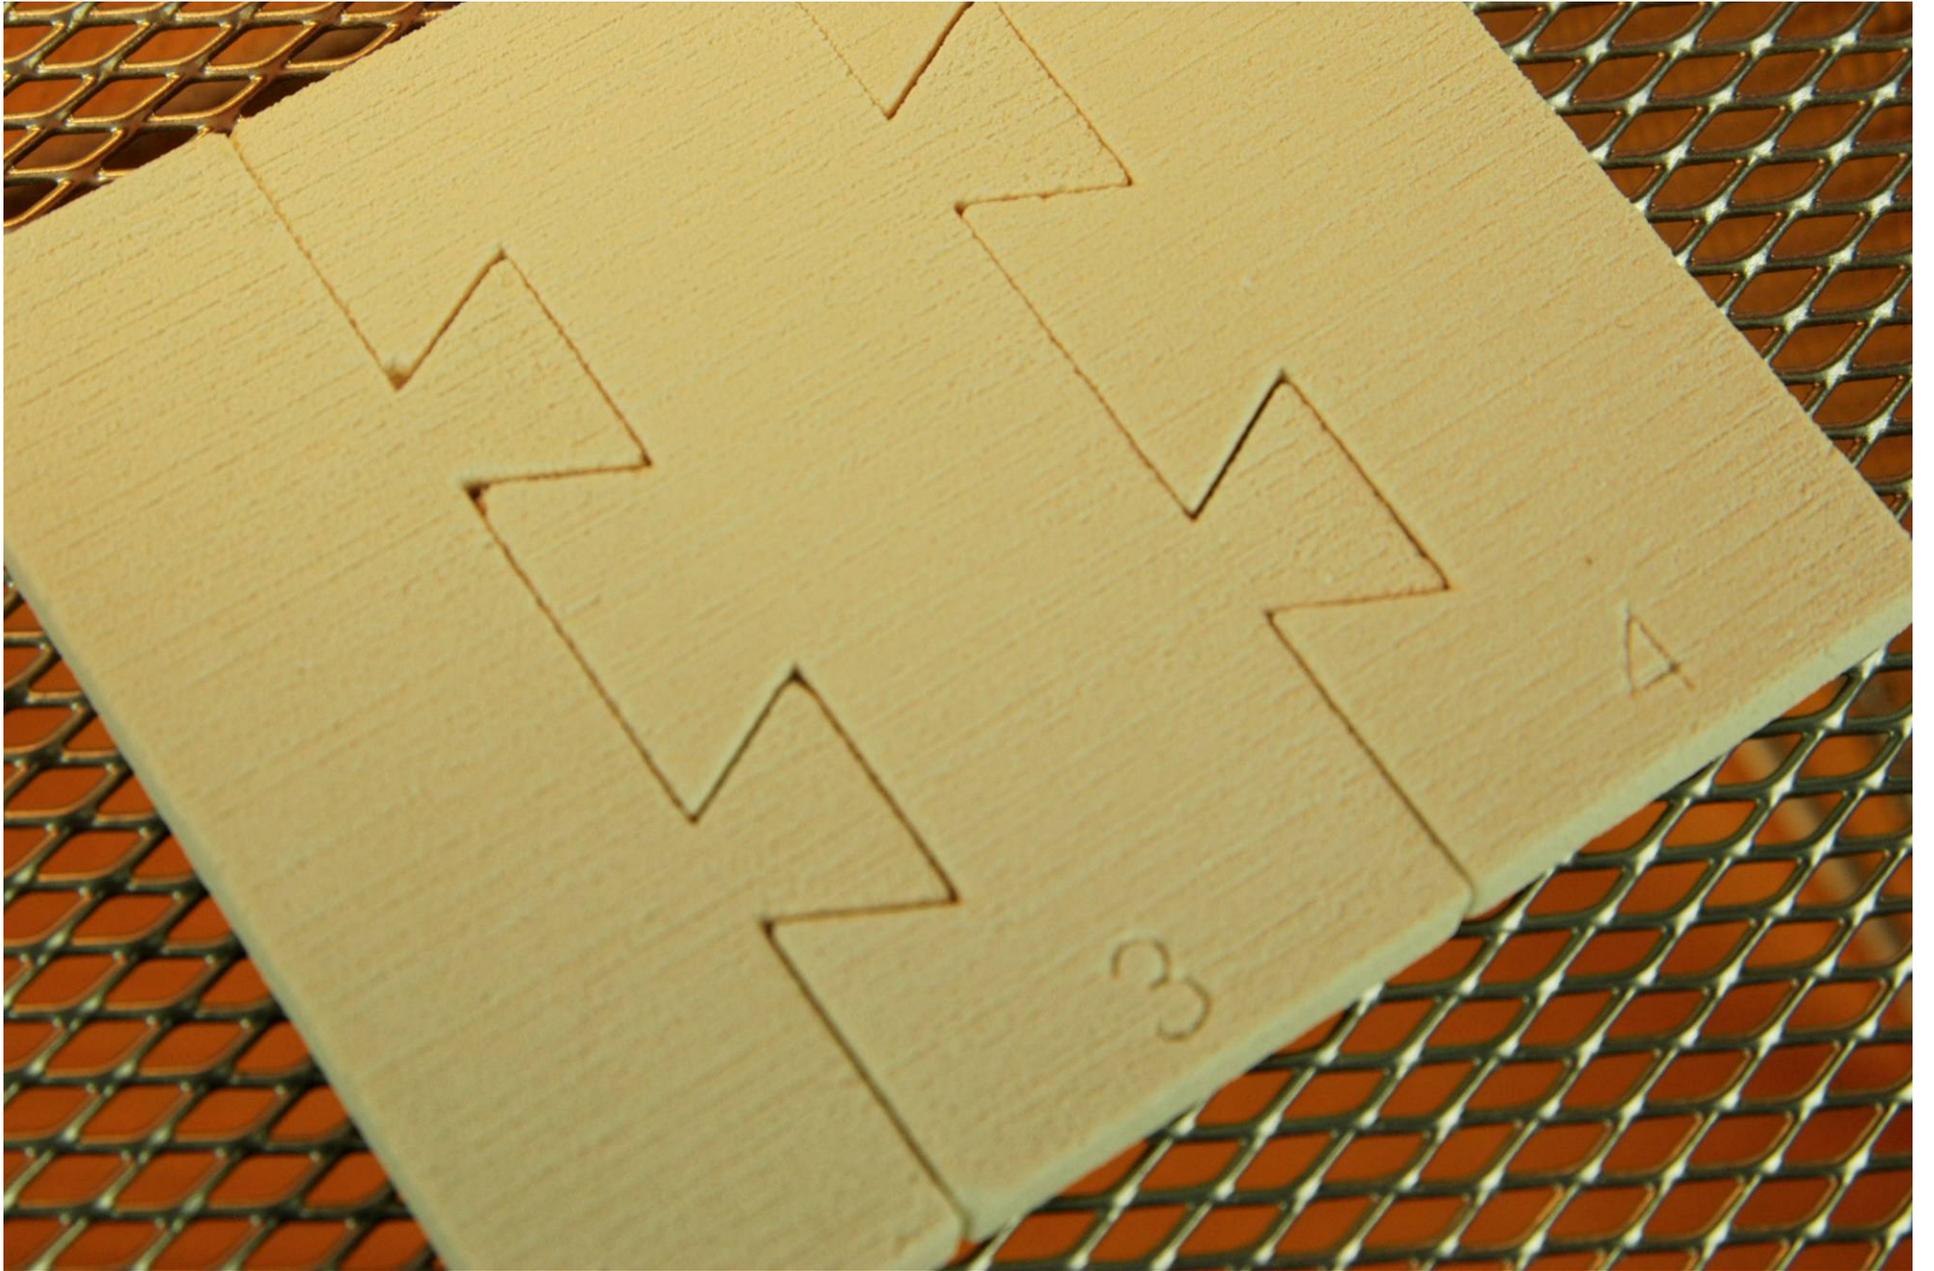

Kilian, A. 2003, Fabrication of partially double-curved surfaces out of flat sheet materials through a 3d puzzle approach, In "ACADIA 2003: Connecting Crossroads of Digital Discourse," Muncie Indiana, Pages 74-81

Soman, Aditya, Swapnil Padhye, and Matthew I. Campbell. 2003. Toward an automated approach to the design of sheet metal components. *Artificial intelligence for engineering design, analysis and manufacturing* 17: 187–204.

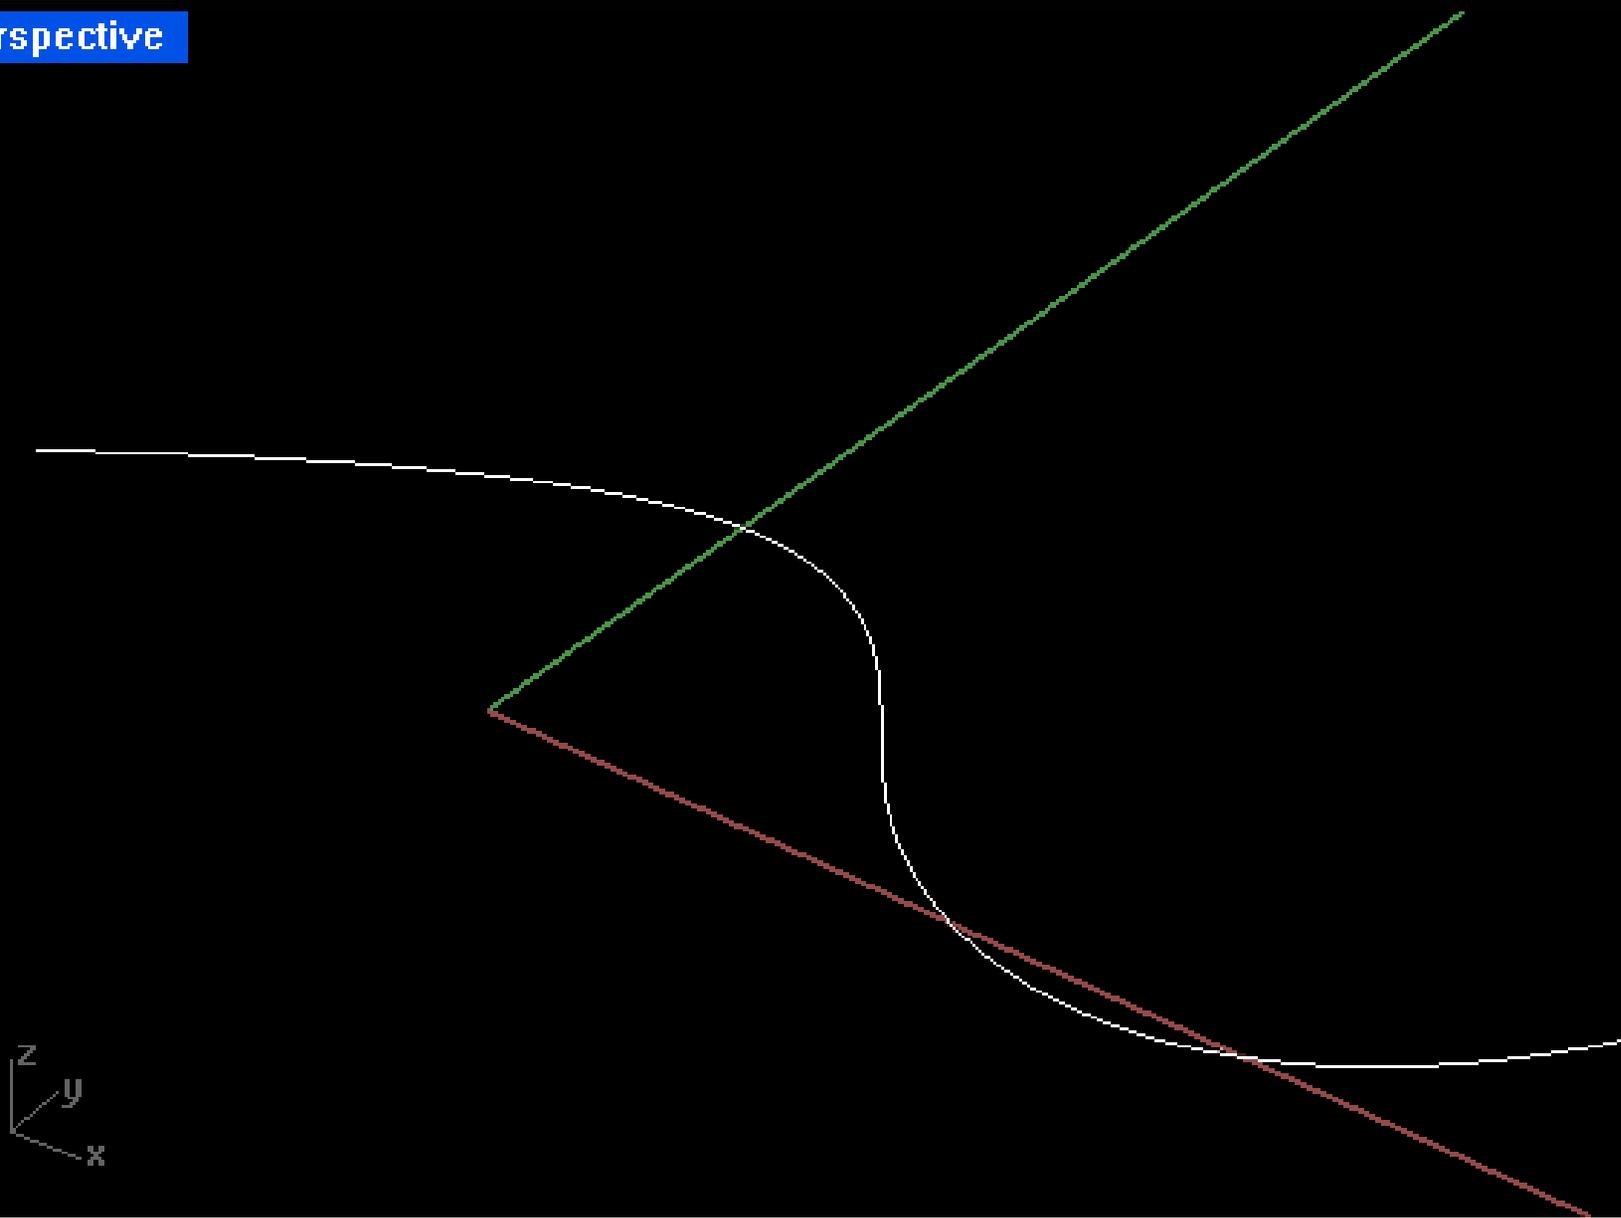

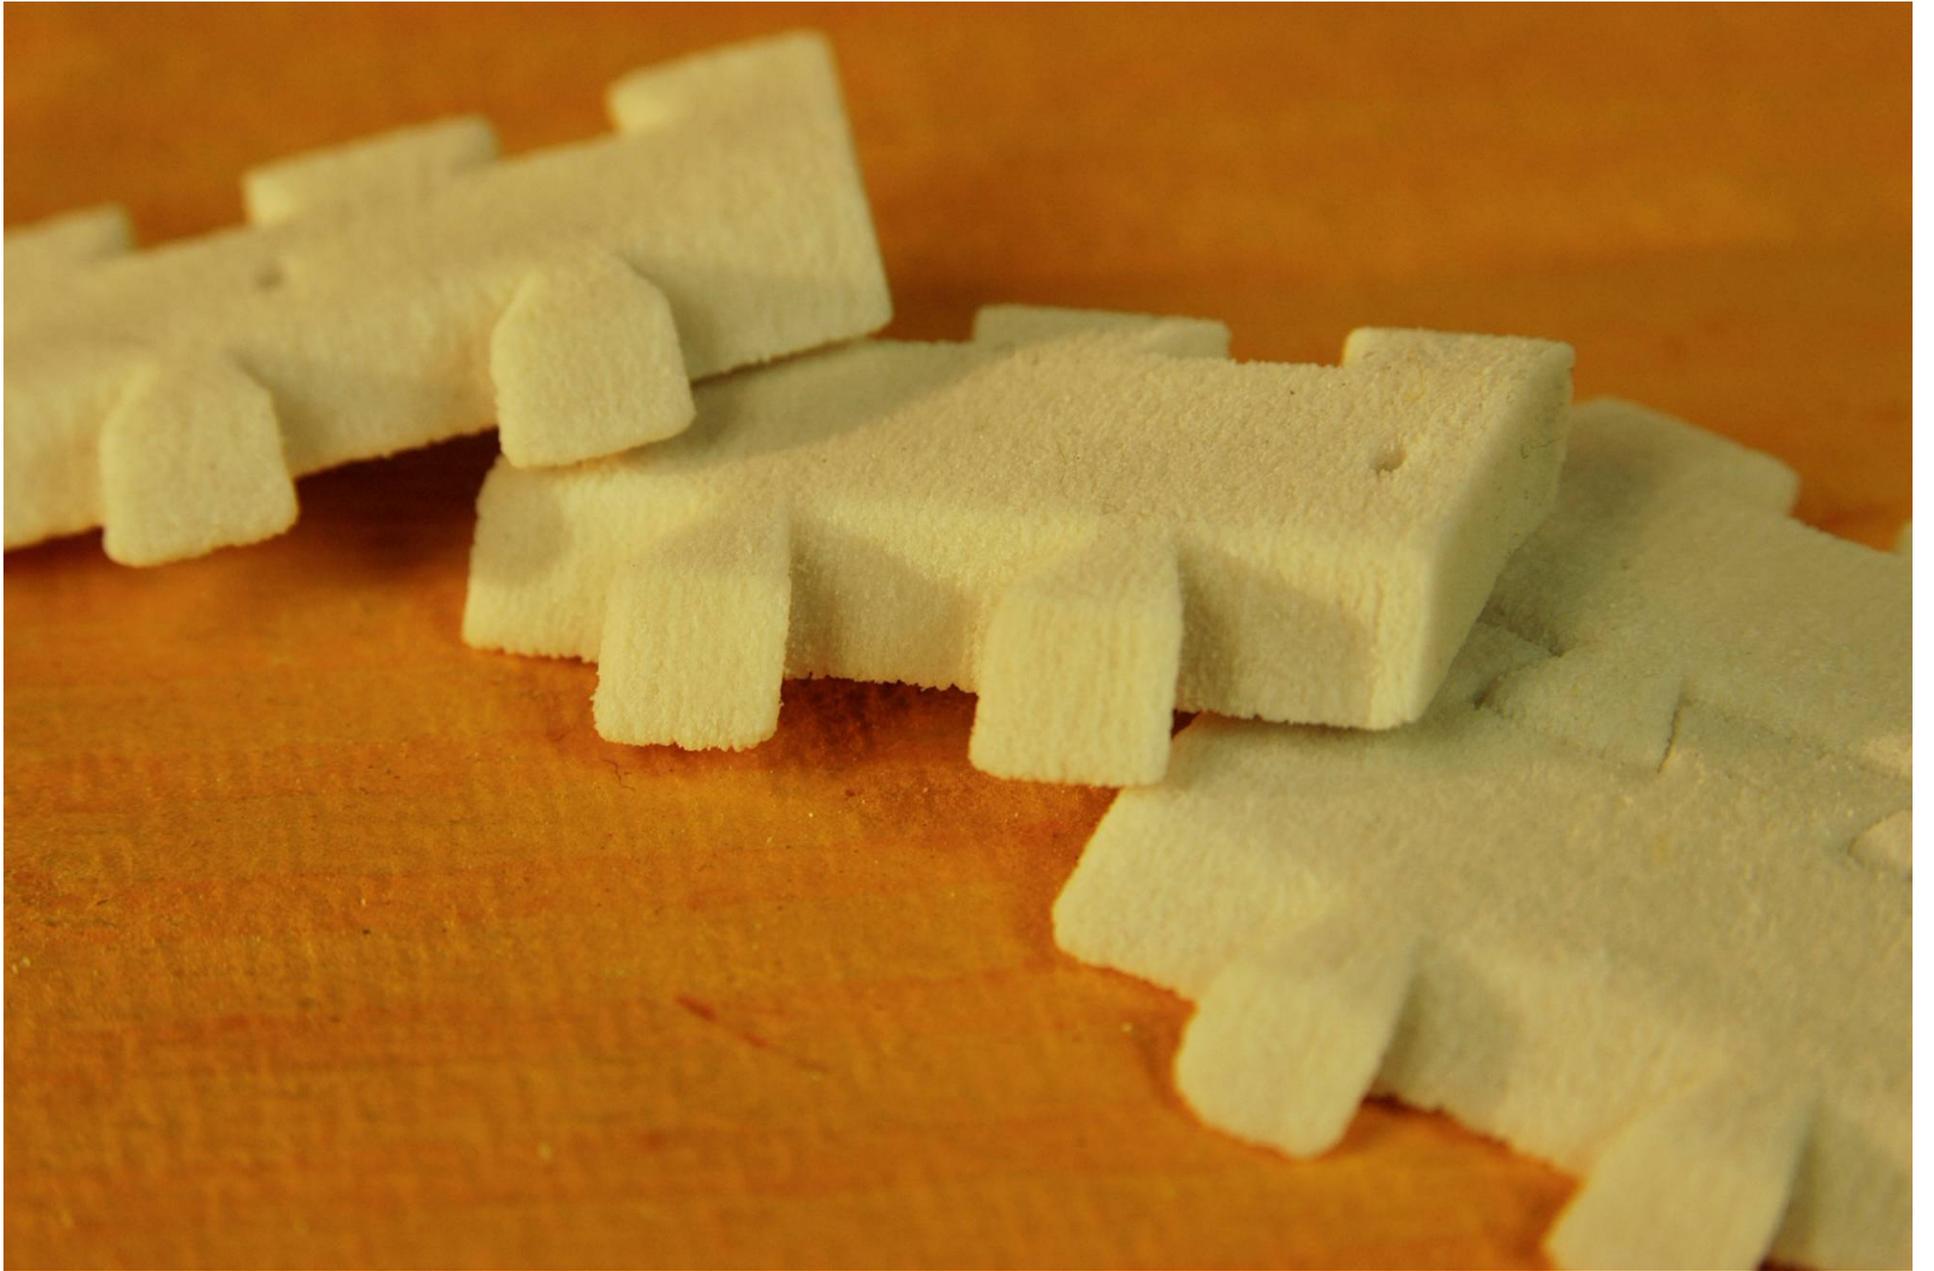

Rule Building

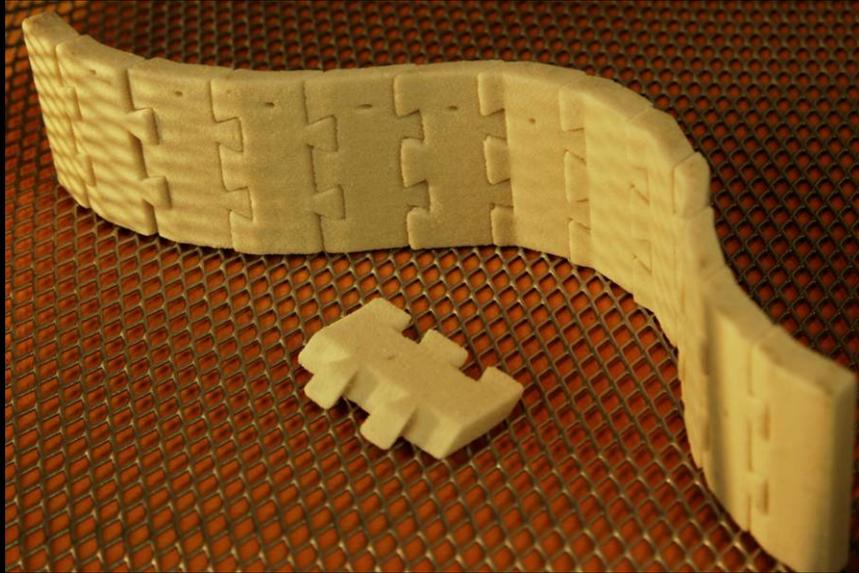

Perspective

1. Builds geometry (generative)
2. Generative base is from material
3. Designs assemblies between defined geometries
4. Prepares geometries for a particular machine

1. Builds geometries at different scales
2. Accounts for tolerances between parts

Emergency Housing

Building low cost housing using computation

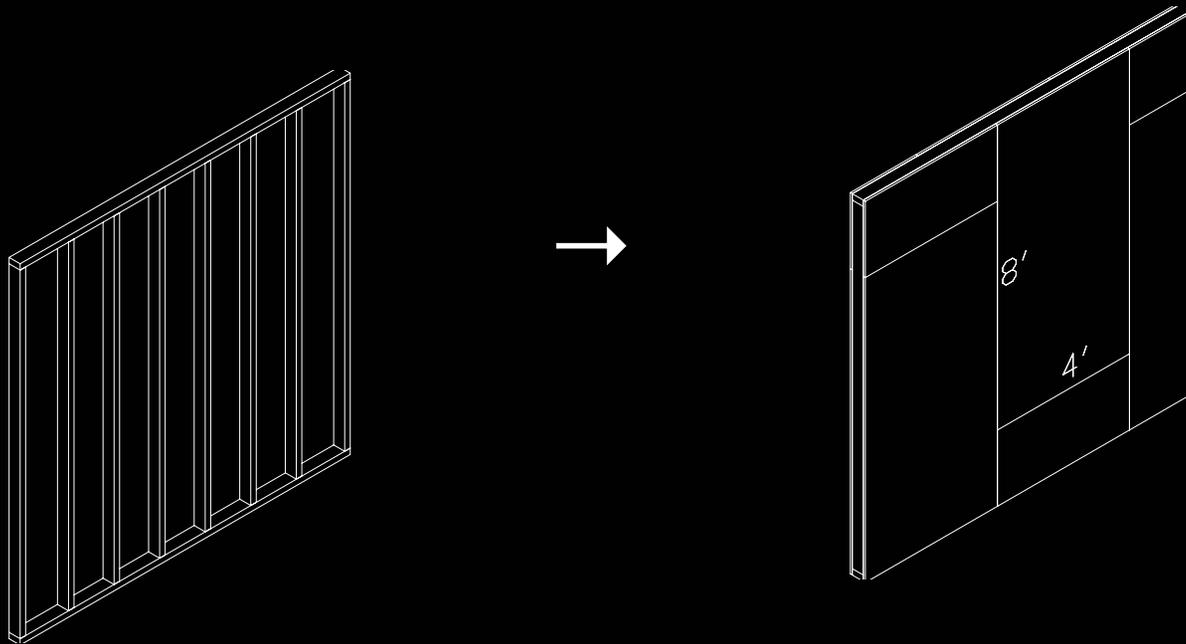

image shelterproject.org
www.shelterproject.org

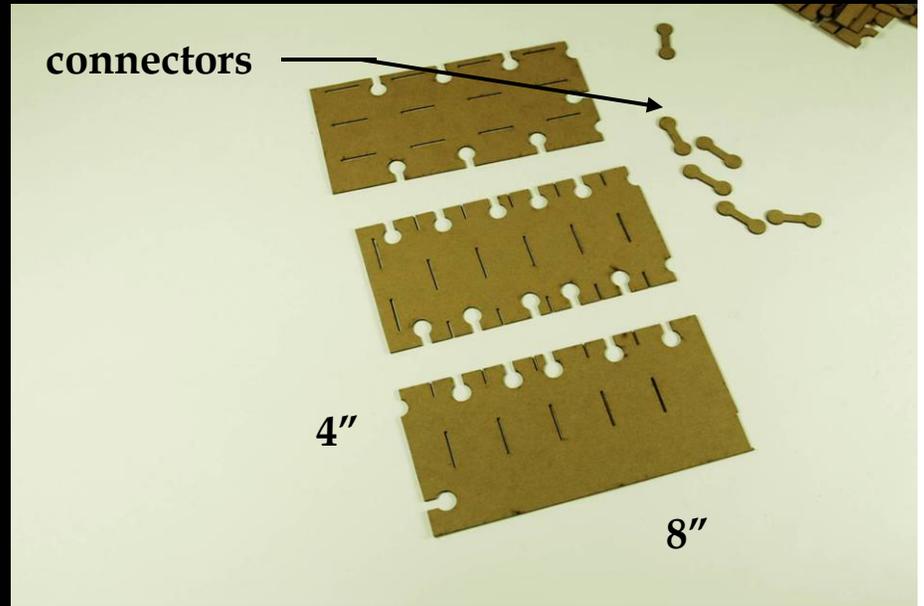

Motivation

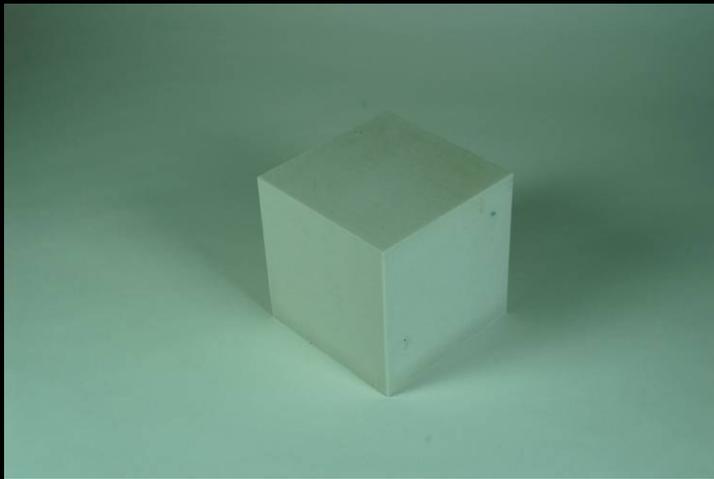

- Houses of one material Plywood or OSB (oriented structural board) 4' x 8' x $\frac{3}{4}$ "
- Friction fit connections
- Computer program to generate the files for CAD CAM fabrication based on shape rules
- Can be built anywhere with or without insulation
- Manufacturing Waste can be recycled

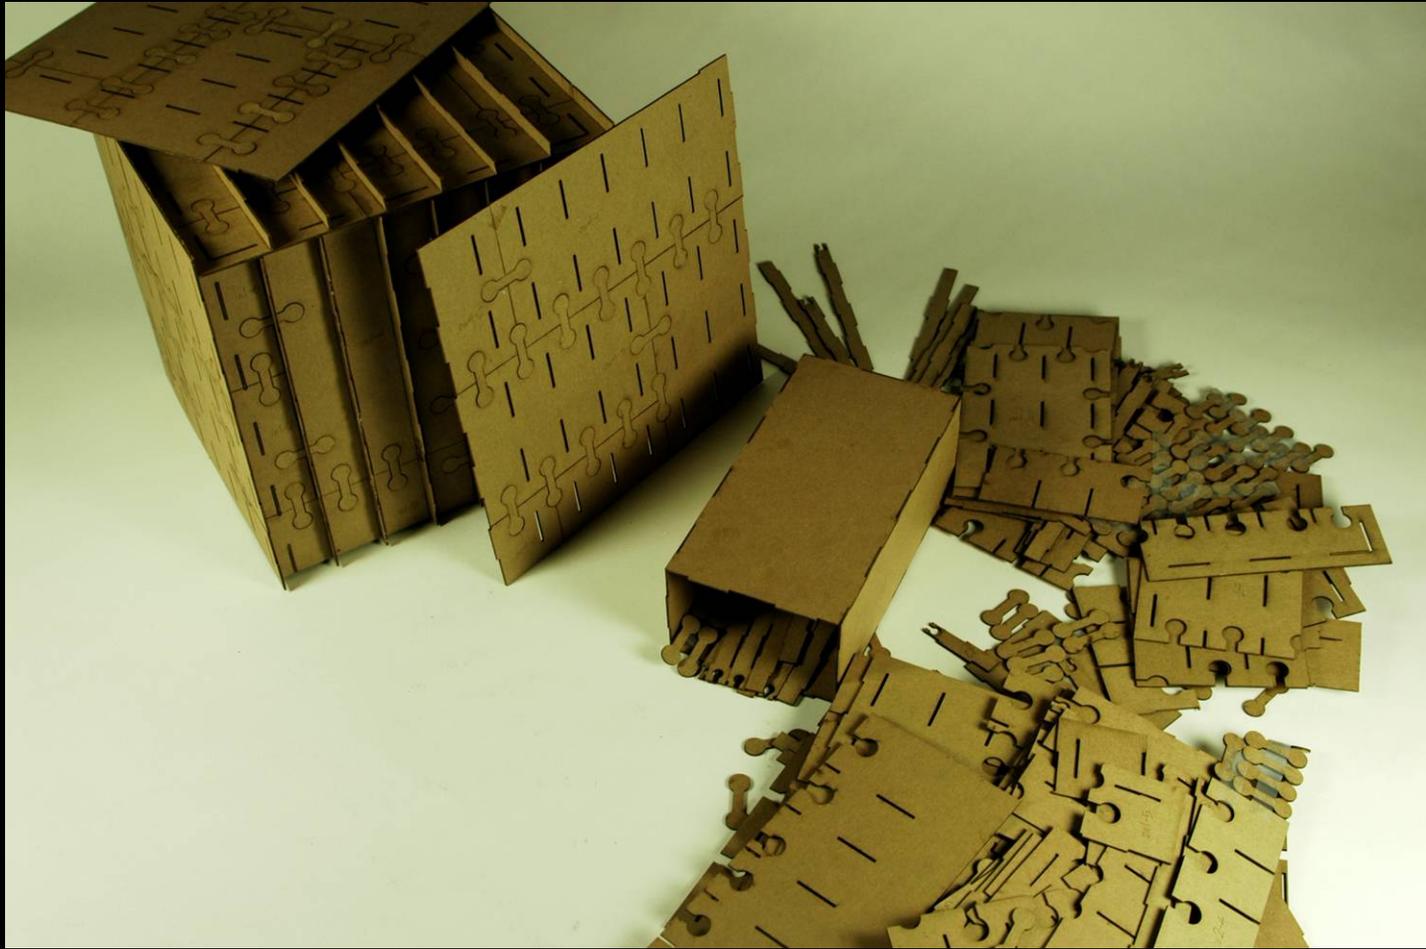

- Rules for traditional walls

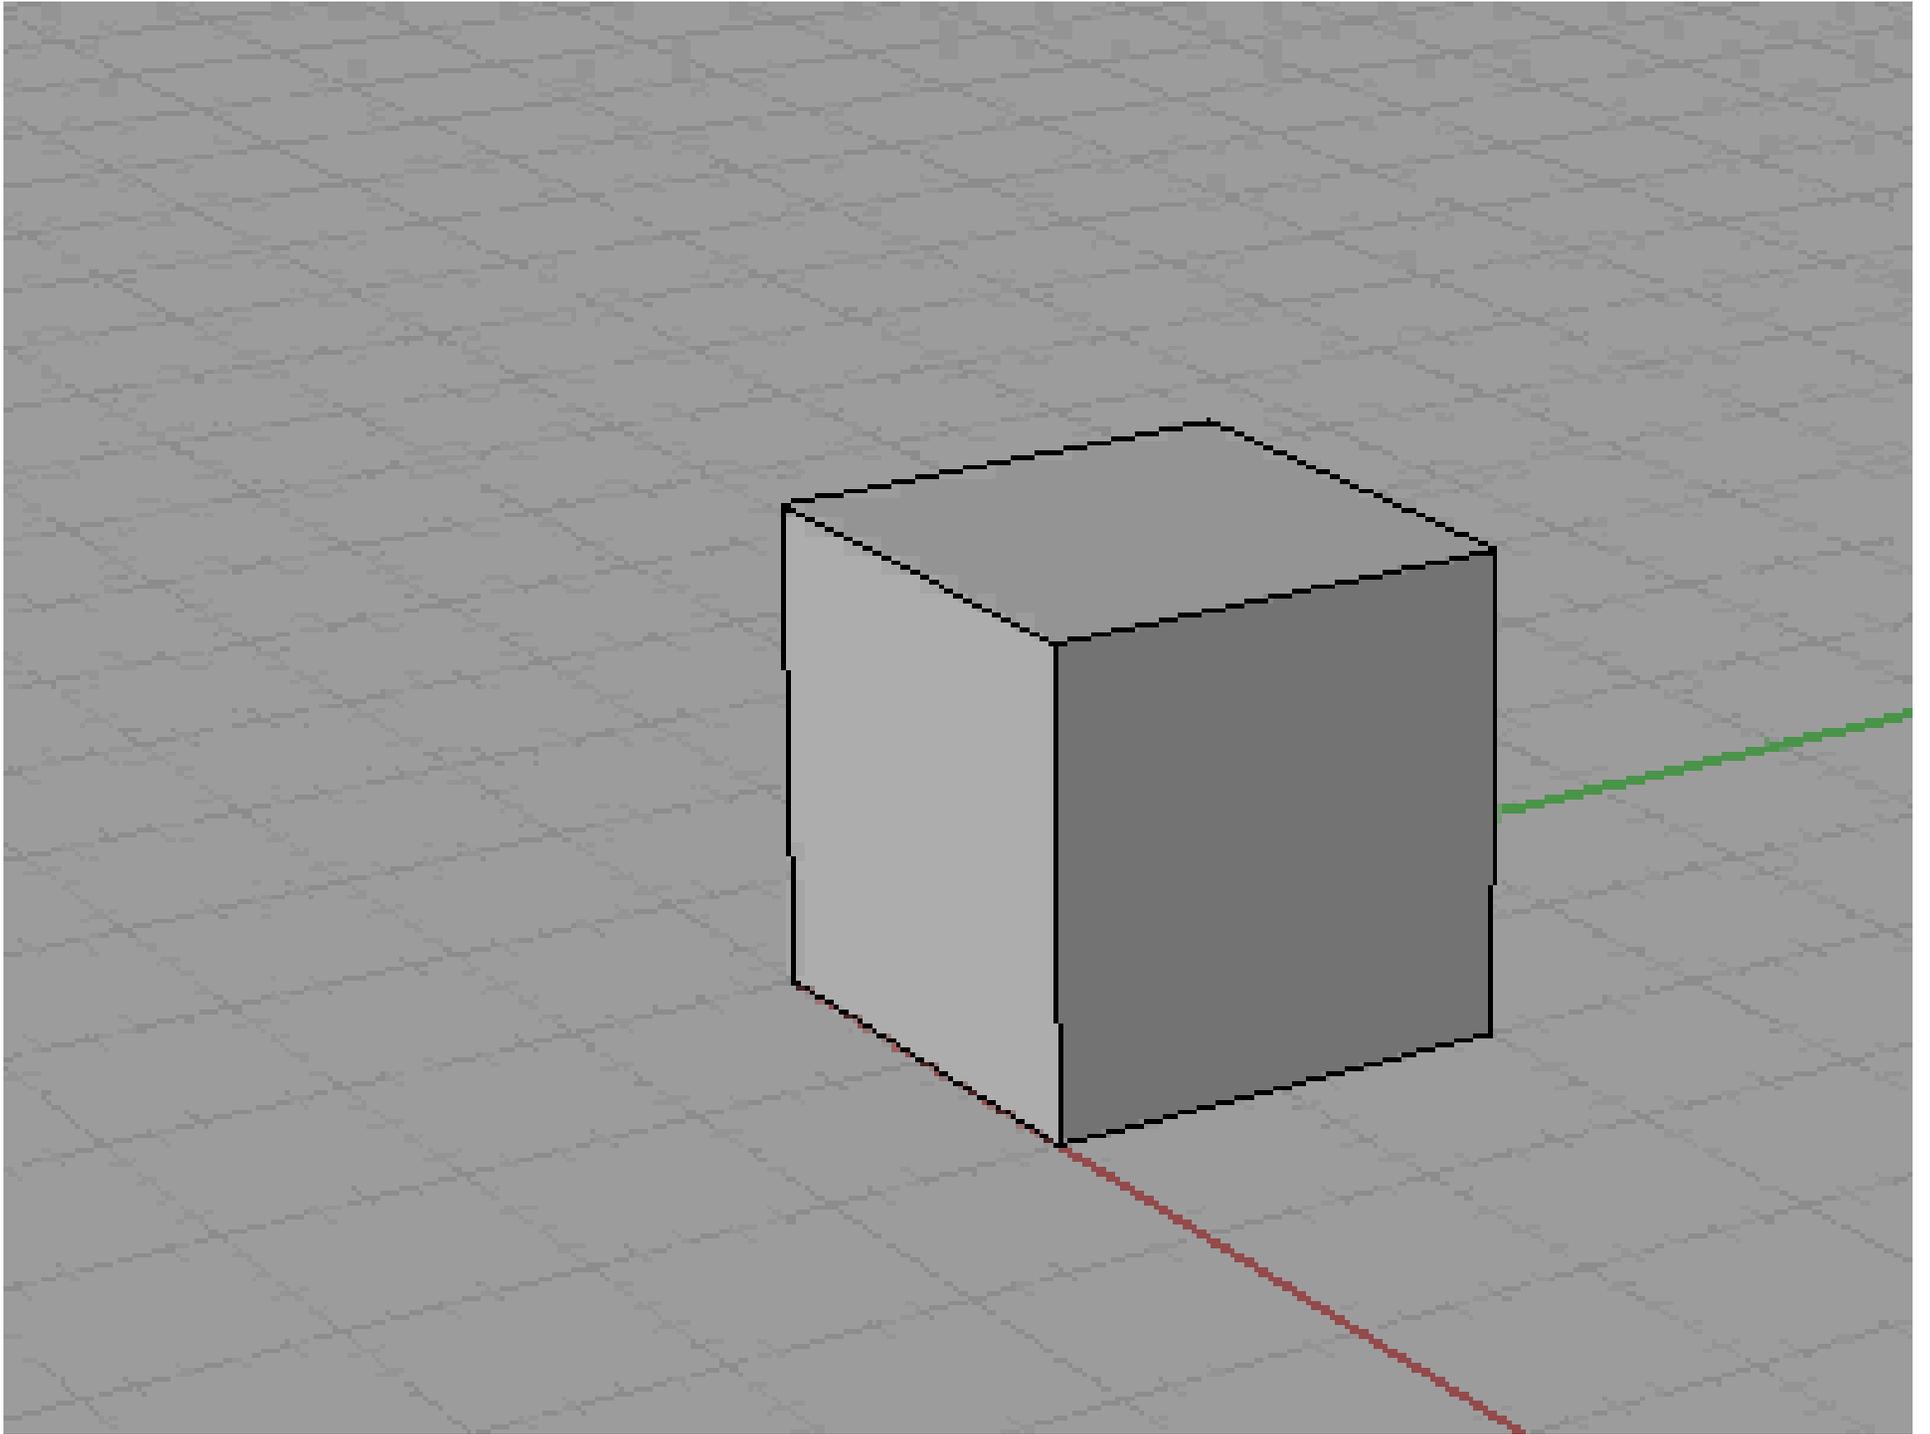

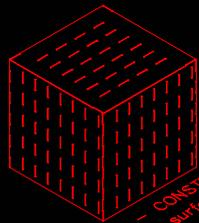

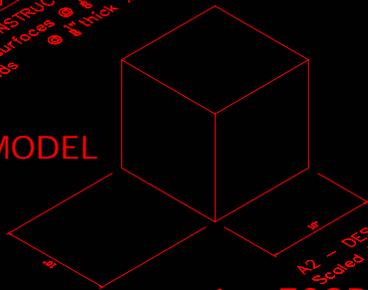

B - CONSTRUCTION MODELS
 wall surfaces --- $\frac{1}{8}$ " thick $\frac{1}{8}$ " wide
 studs --- $\frac{1}{8}$ " thick $\frac{1}{8}$ " wide

2 - MASTER MODEL

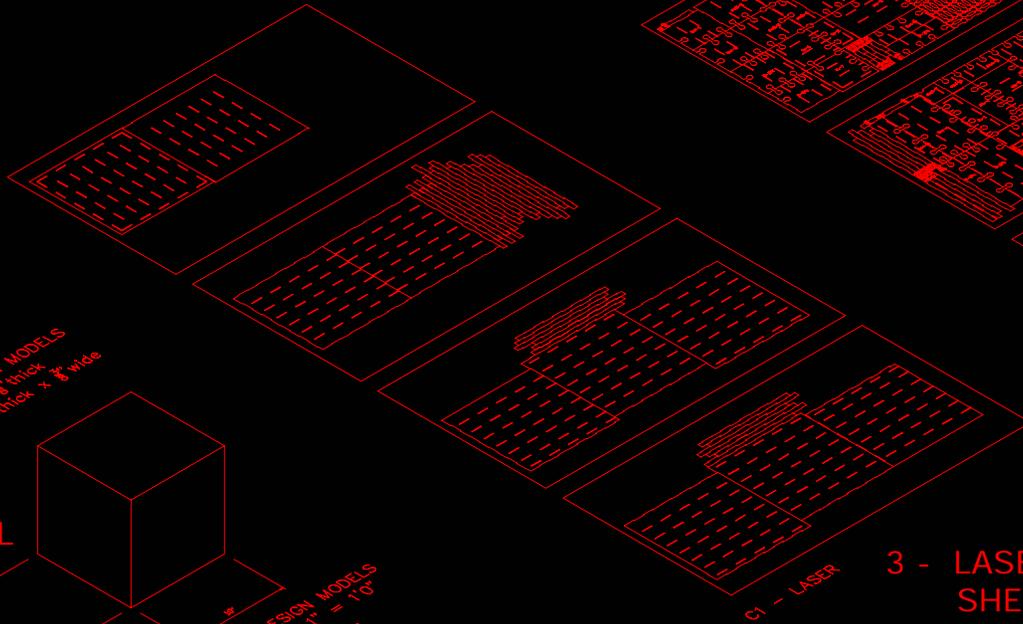

1 - ZCORP

A2 - DESIGN MODELS
 Scaled to 1" = 1'0"

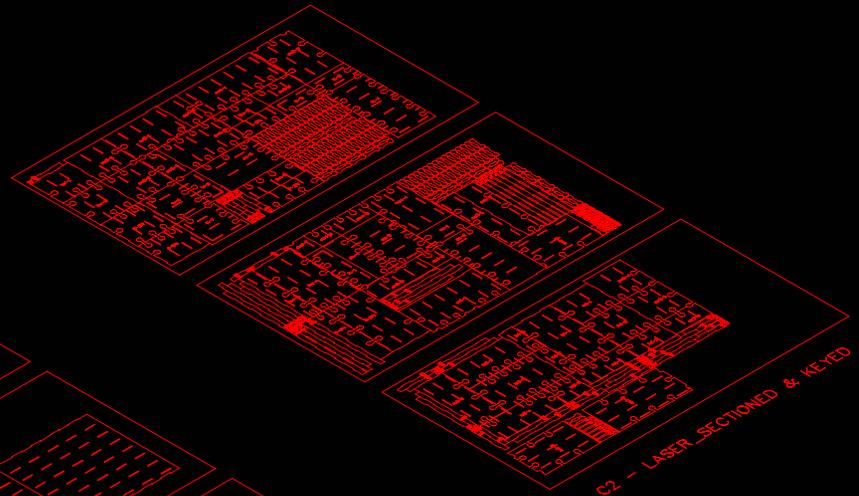

A1 - 3/8" PRINT
 1" = 1'0"

C1 - LASER

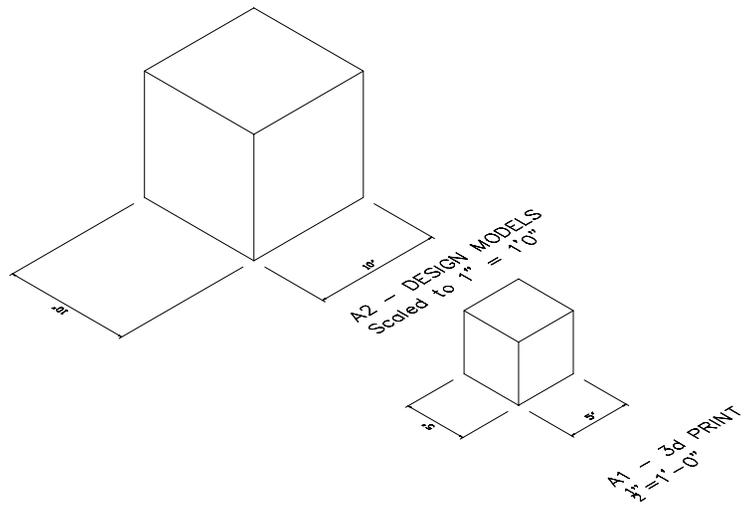

3 - LASER CUT SHEET

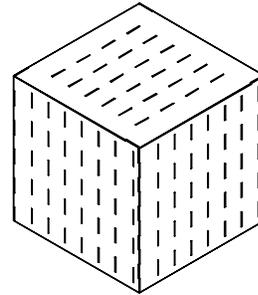

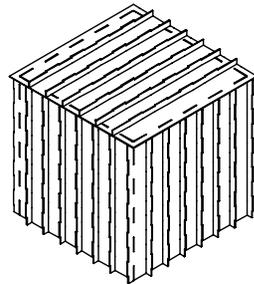

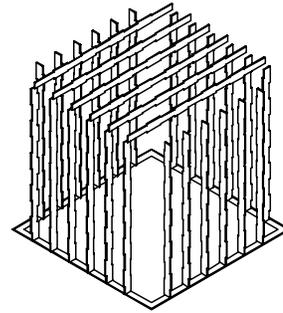

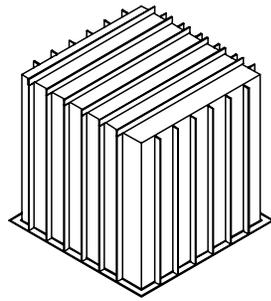

C2 - LASER SECTIONED & KEYED

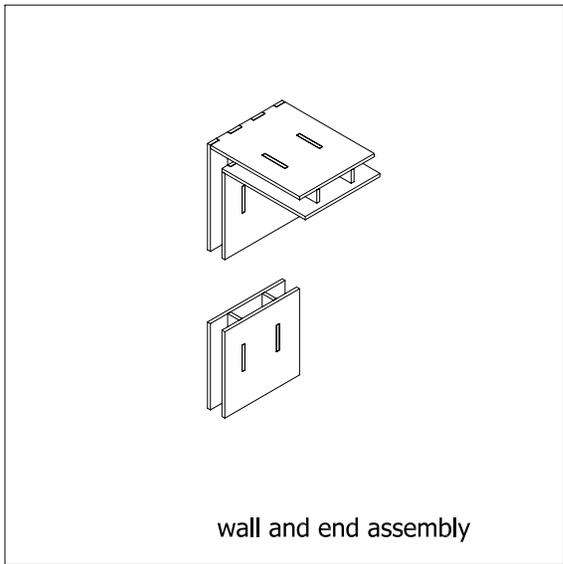

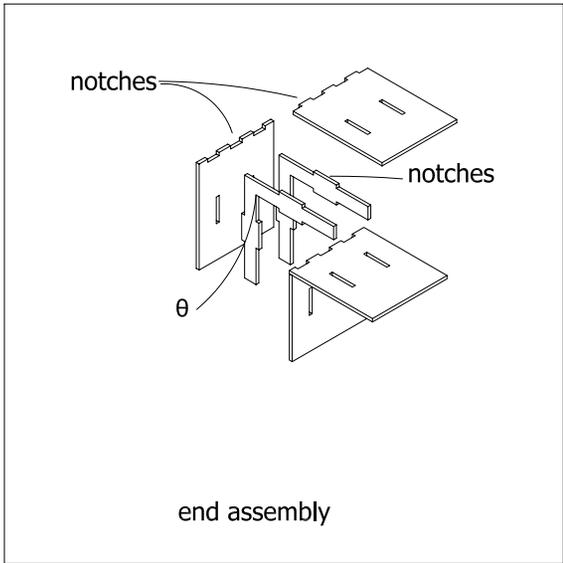

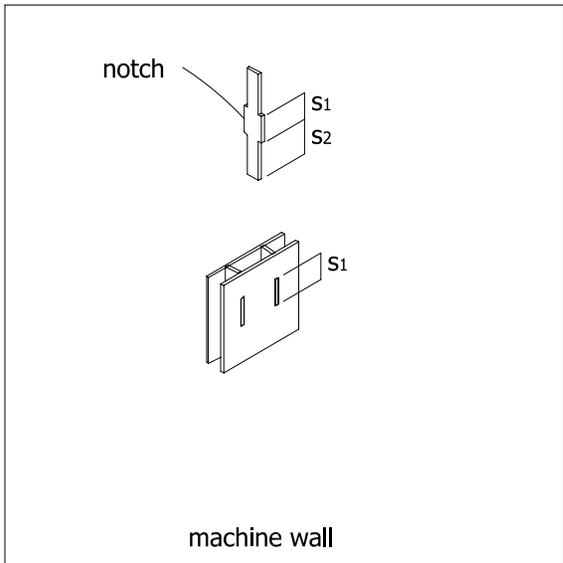

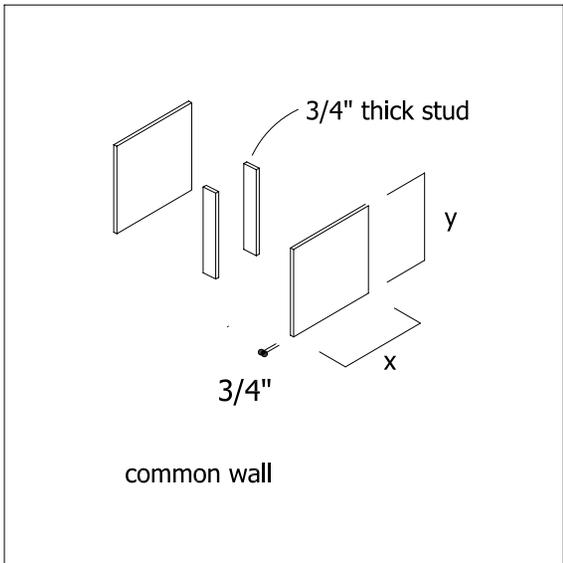

4 - NC CUT SHEET

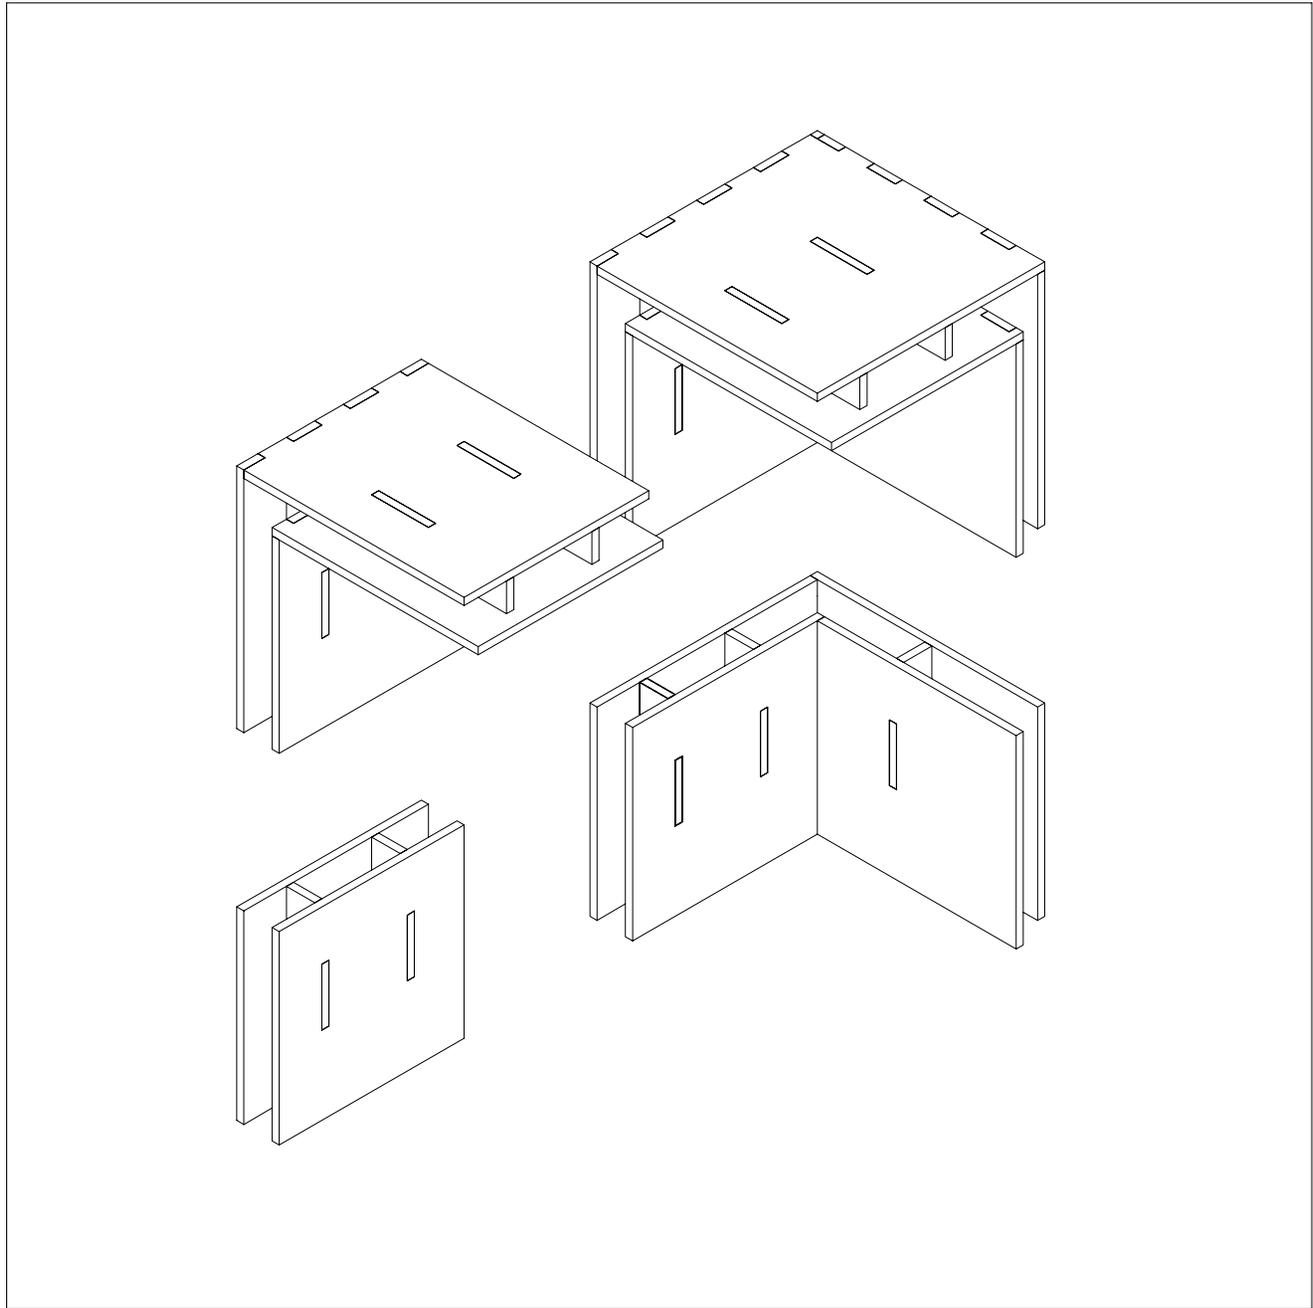

1 - Design Model

2 - Master Model

2 – Master Model Program Functions

wall panels
(parametric)

(1)

object flattener
(translation)

(5)

studs
(boolean)

(2)

nesting - laser cut
(translation)

(6)

notcher stud
(boolean)

(3)

nesting - nc tooling
(translation)

(7)

notcher panel
(boolean)

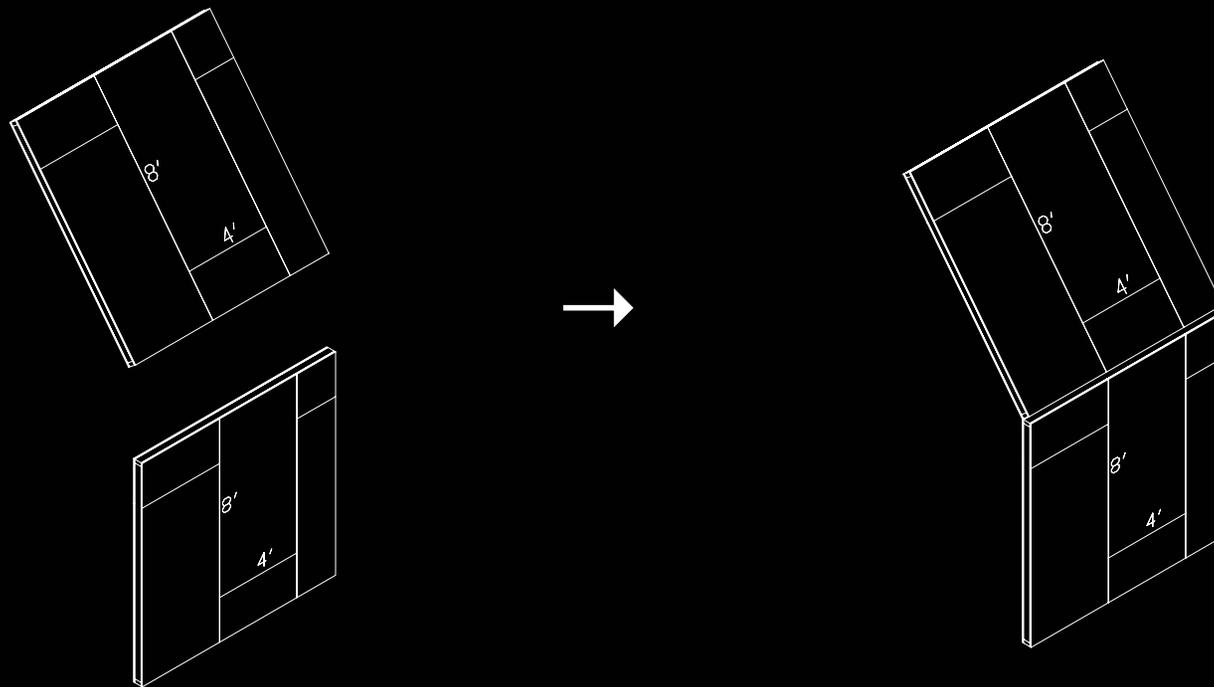

(4)

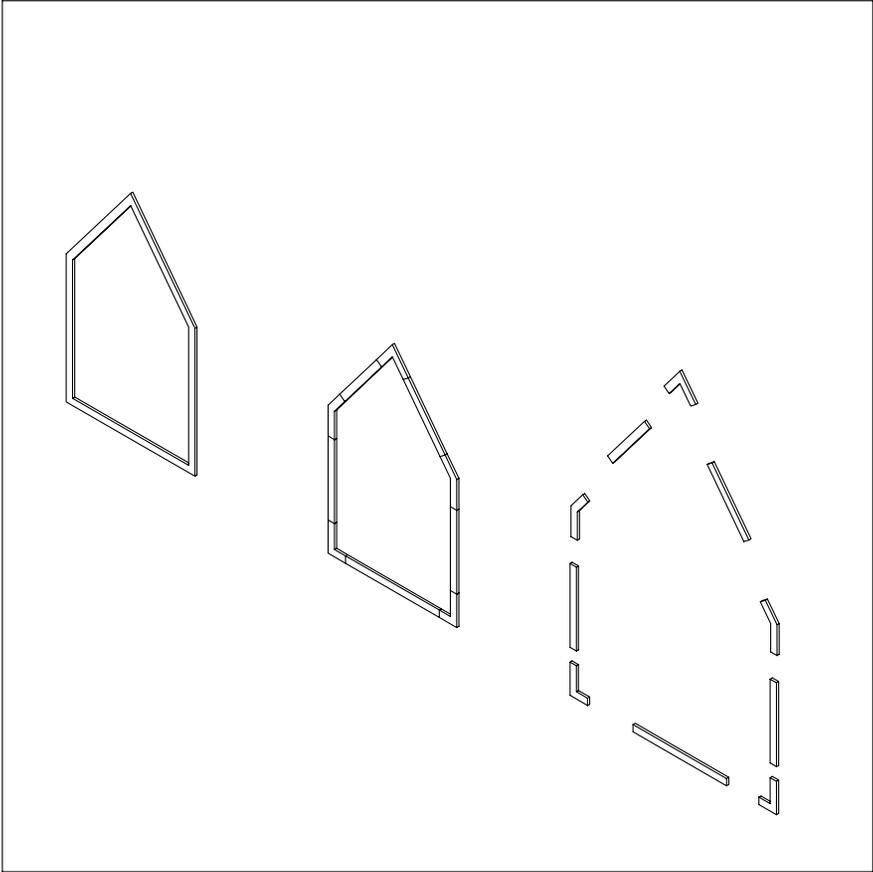

tolerances
(translations)

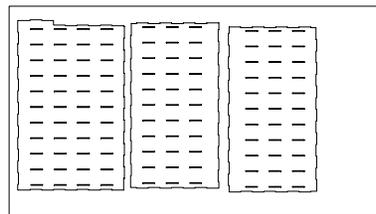

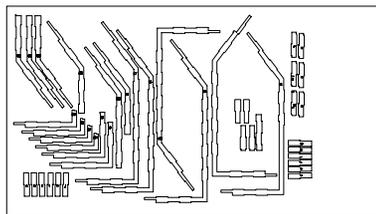

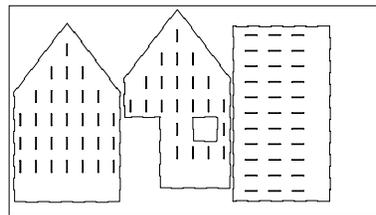

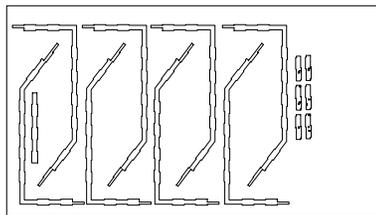

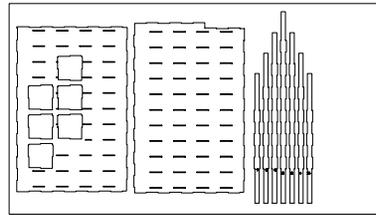

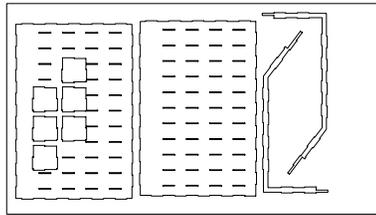

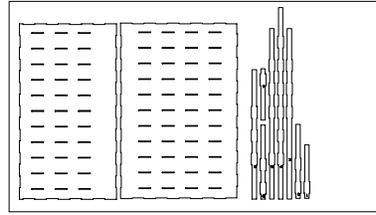

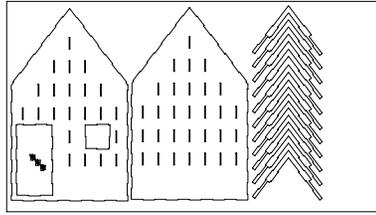

(8)

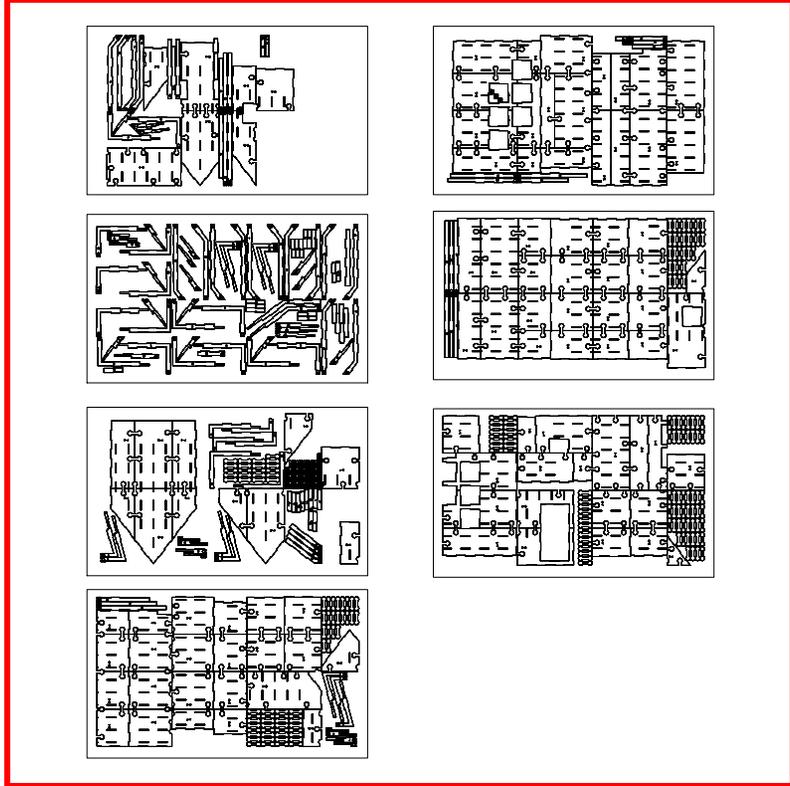

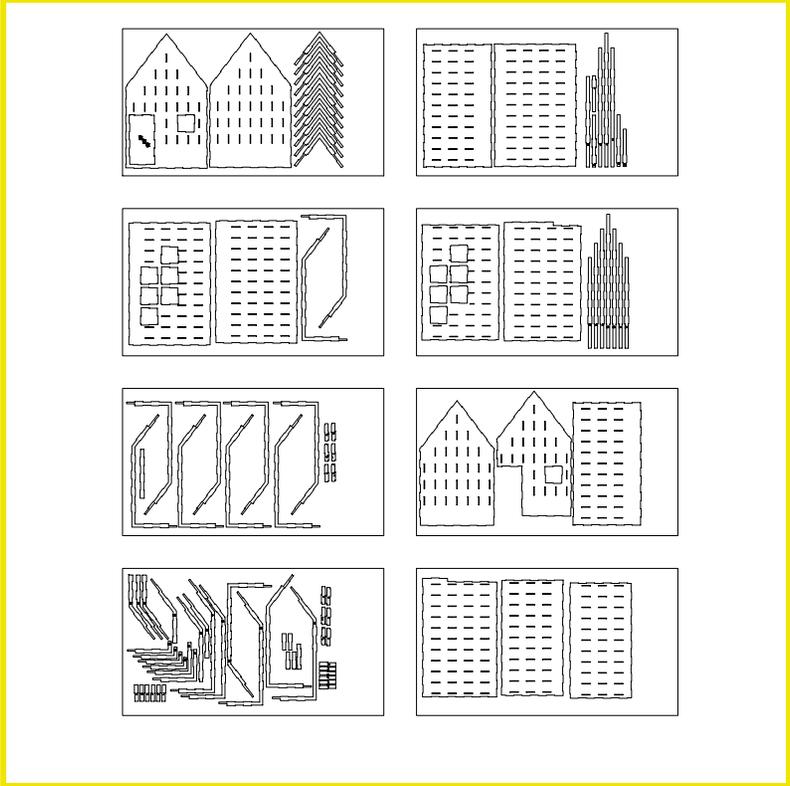

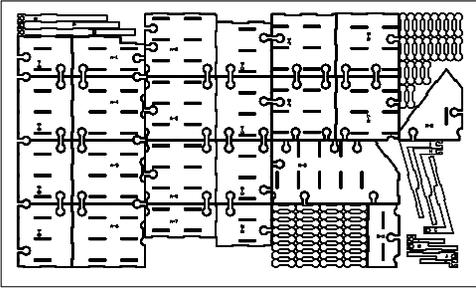

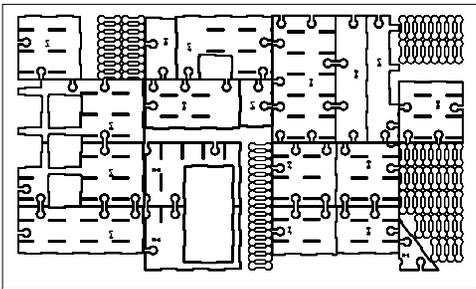

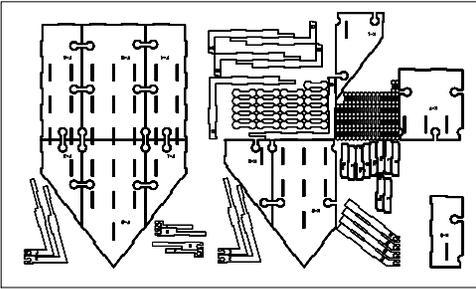

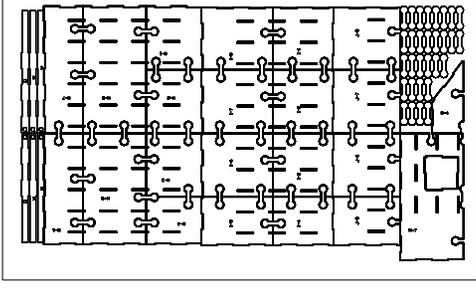

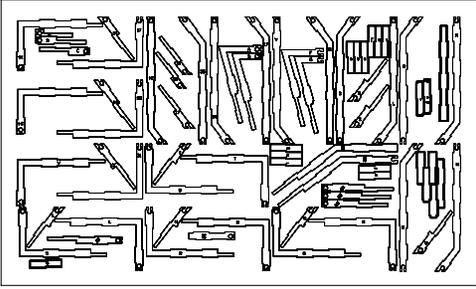

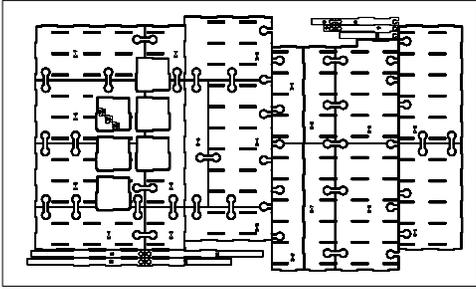

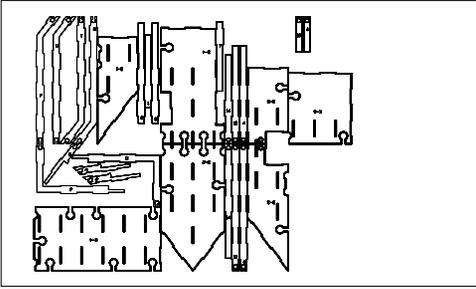

- Traditional wall section

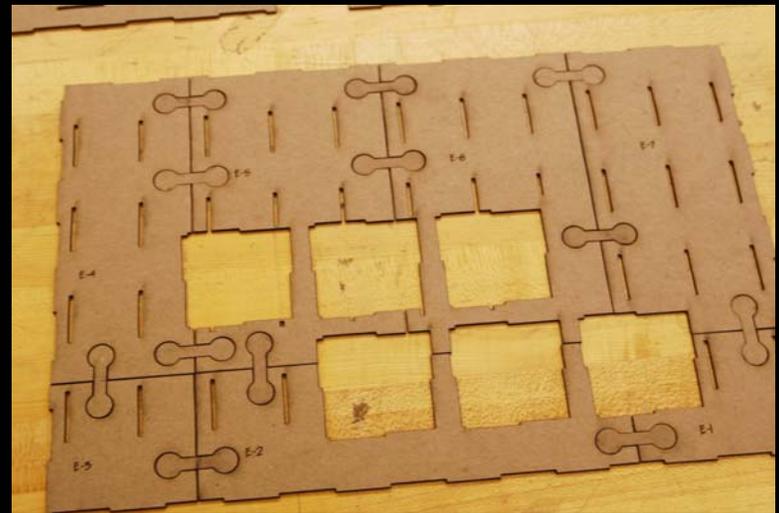

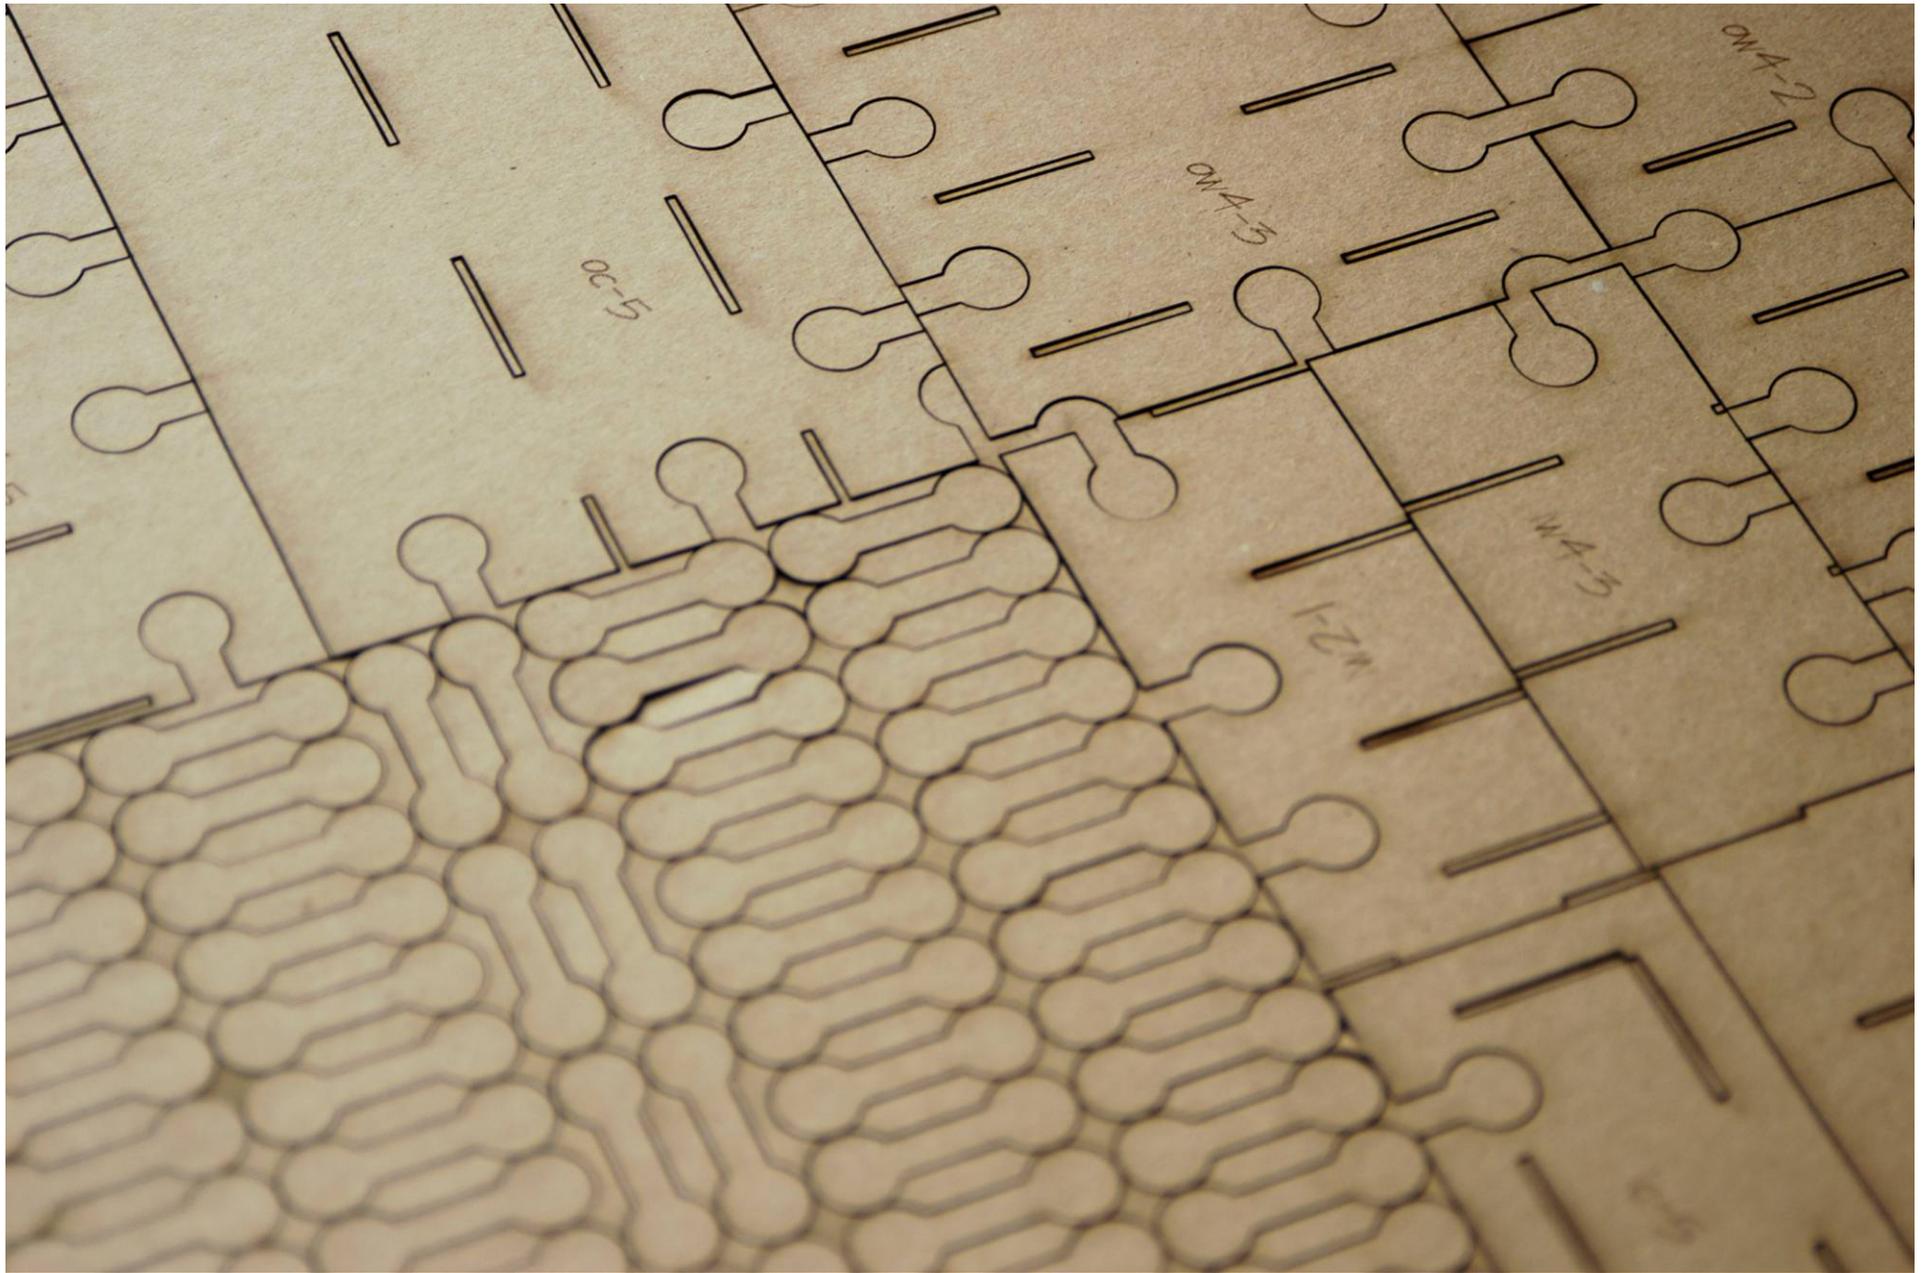

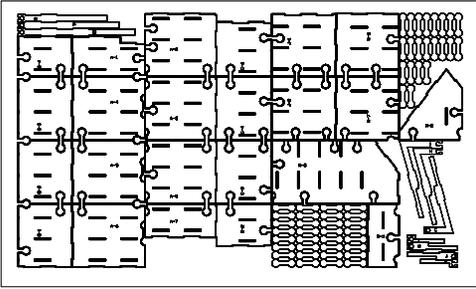

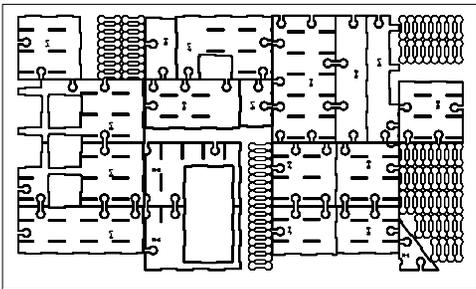

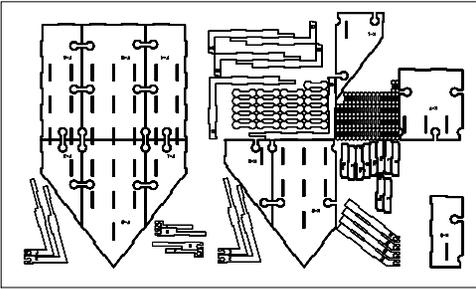

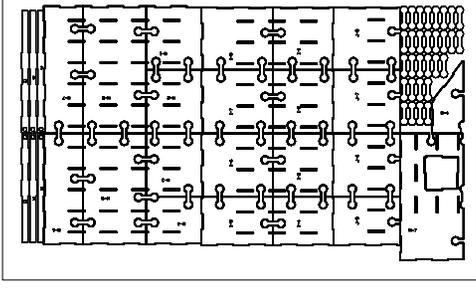

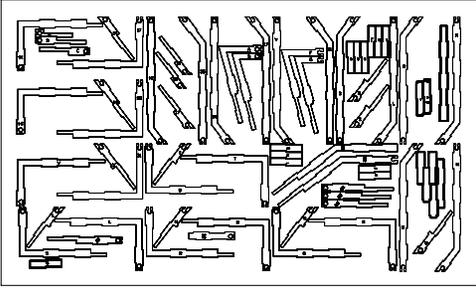

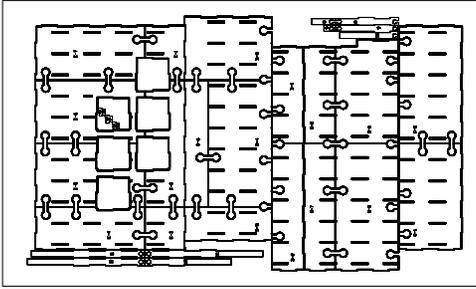

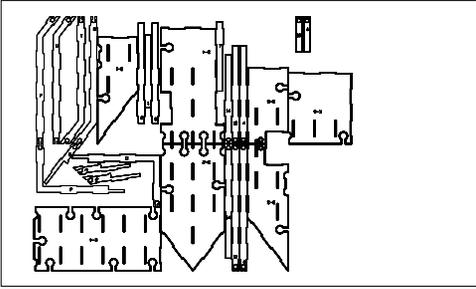

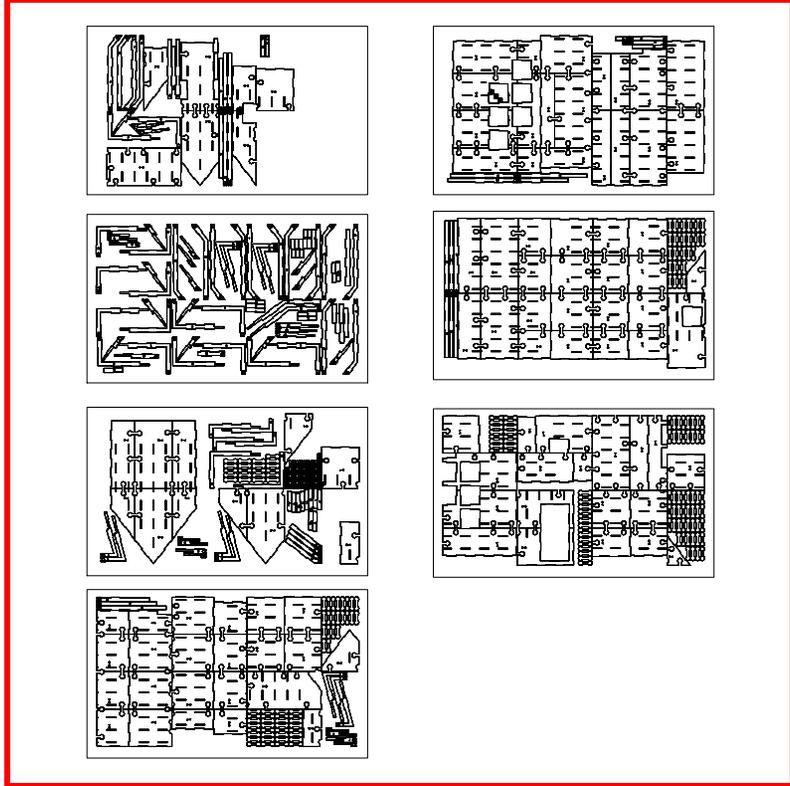

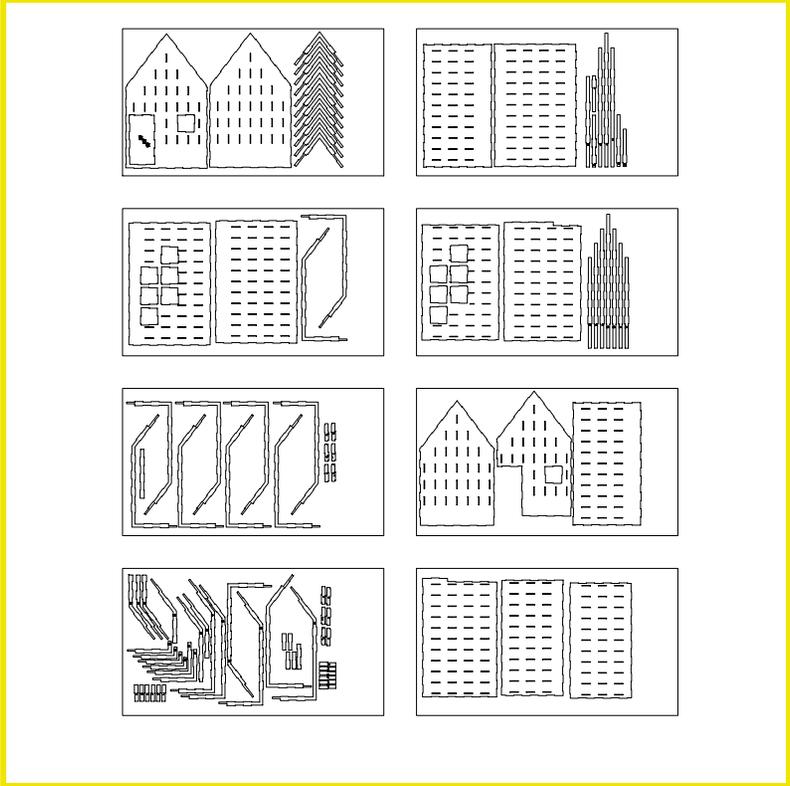

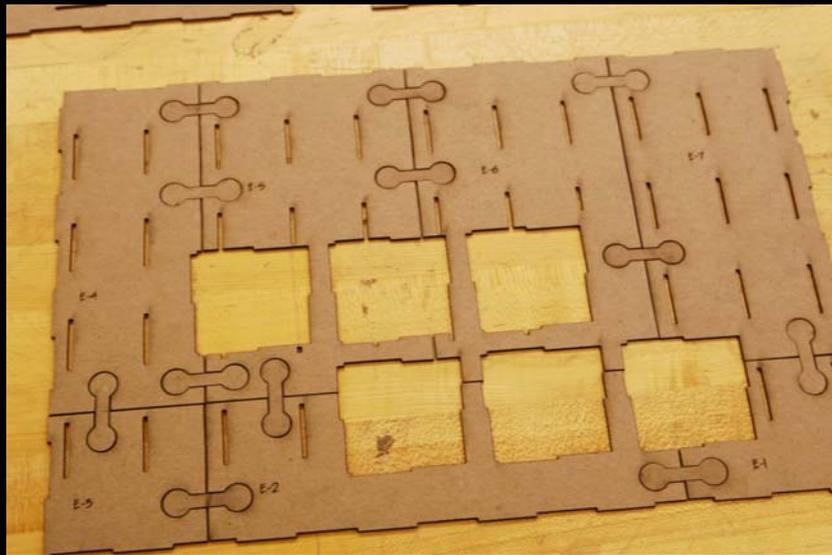

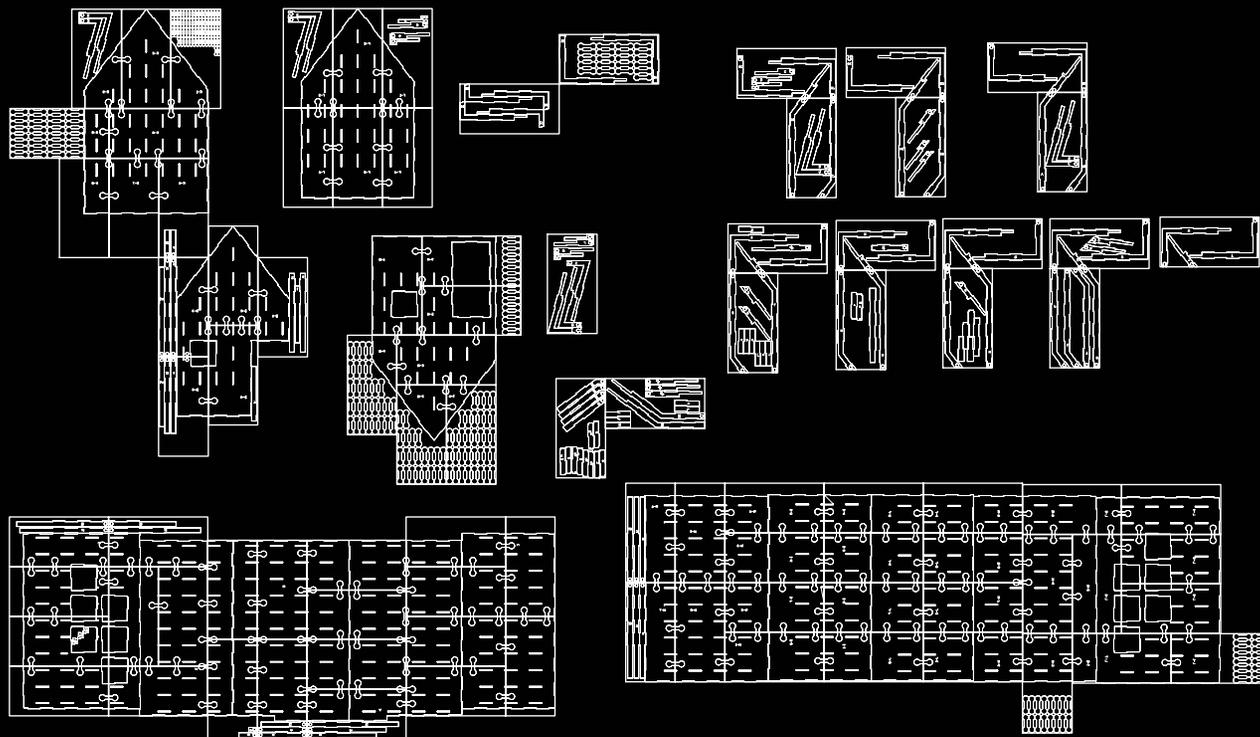

Plywood Sheets

- **Cut Sheet for House**
- Layout for 4' x 8' x $\frac{3}{4}$ " Plywood Boards
- Each Board is \$22.00/Sheet (Home Depo-Boston)
- 93 Boards x \$22.00 = \$2046.00

Proposed Emergency Housing Fabware

1. Builds geometry (generative)
2. Generative base is from material
3. Designs assemblies between defined geometries
4. Prepares geometries for a particular machine
5. Builds geometries at different scales
6. Accounts for tolerances between parts

Digital Fabrication Software

Fabware

1. Generative
2. Scalable
3. Material Constraints
4. Assemblies
5. Tolerances
