

# 4.401/4.464 Environmental Technologies in Buildings

Christoph Reinhart

LOI Course Introduction | Energy Use in Society

Massachusetts Institute of Technology  
Department of Architecture  
Building Technology Program

# MIT SUSTAINABLE DESIGN LAB

"Our goal is to **change** current architectural design and urban planning **practice** by developing, validating and testing workflows and metrics that lead to improved building and neighborhoods regarding resident **comfort** and **resource efficiency**."

# Course Description

The primary focus of this course is the study of the **thermal, luminous, and acoustic** behavior of buildings.

The course examines the basic **scientific principles** underlying these phenomena and introduces students to a range of **technologies** and **analysis techniques** for designing comfortable indoor environments.

Students will be challenged to apply these techniques and explore the role light, energy, and sound can play in **shaping architecture**.

# At the end of the course you will be able to ...

- understand and apply the scientific principles underlying the thermal and luminous behavior of buildings,
- learn to evaluate the pros and cons of a range of technologies for creating comfortable indoor environments,
- conduct a series of design analysis workflows regarding climate, building energy use, and daylighting,
- acquire the knowledge required to critically discuss/present the environmental concept of a building.

# Educational Approach

- Balance between physical principles and design analysis techniques for a more evidence-based design approach.
- We will be covering an enormous field. Are there any specific topics of interest? Just ask!

My goal is to give you the skills that you need to design resource-efficient buildings with high occupant satisfaction.

# Mechanics

- Weekly lectures on Mondays and Wednesdays from 11.00 to 12.30.
- Friday lab from 10.00 to 11.00 for 4.464 and 11 to noon for 4.401.
- My availability: After class and by appointment.

# Course Requirements

- Attendance at all lectures and workshops is mandatory.
- All assignments have to be submitted in time. Late assignments will not be accepted.
- Preparation of 20-minute in-class group presentation on one of this year's AIA Cote Top Ten Projects.
- Present a group course project in class on (4.401) or during exam week (4.464).
- Active participation in class discussions.
- Participation in Simulation Game.

# Course Evaluation

- ❑ Quality and timely submission of completed assignments (45%).
- ❑ Course project presentation (30%)
- ❑ Case study presentation (15%).
- ❑ Participation in class discussions (10%).

# Course Project

The course project will be to develop and present an environmental concept for a medium-sized office building/innovation space in Seattle, Chicago, or Houston. Project presentations should include:

- Overall design approach and environmental features
- Daylighting, glare, and electric lighting analysis
- Thermal analysis and predicted energy use

Next week, we will form groups for the course project and AIA project presentations. Group sizes will depend on final enrollment numbers.

# Simulation Game

## Paper:

- ❑ C F Reinhart, T Dogan, D Ibarra and H W Samuelson, "Learning by doing - Teaching energy simulation as a game," *Journal of Building Performance Simulation*, October 2011.
- ❑ C F Reinhart, J Geisinger, M Saratsis and T Dogan, *Building Simulation 2015 in Hyderabad*, December 2015.

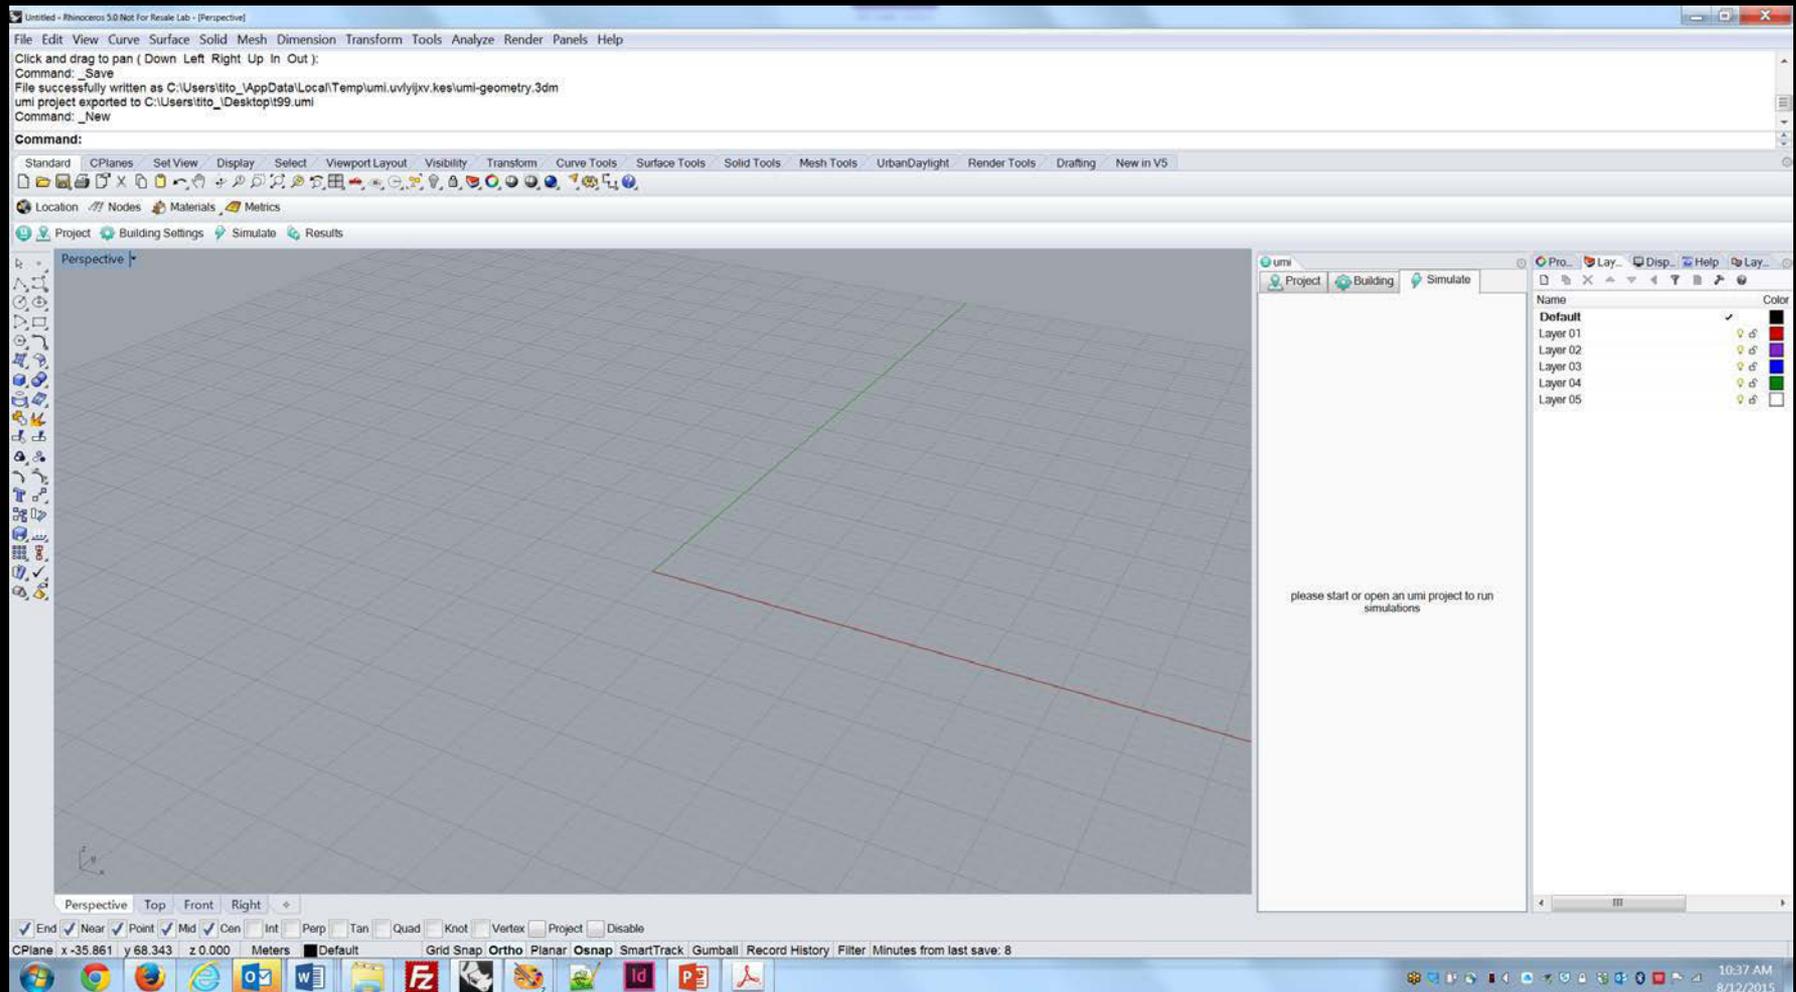

# Resources

# Course Software

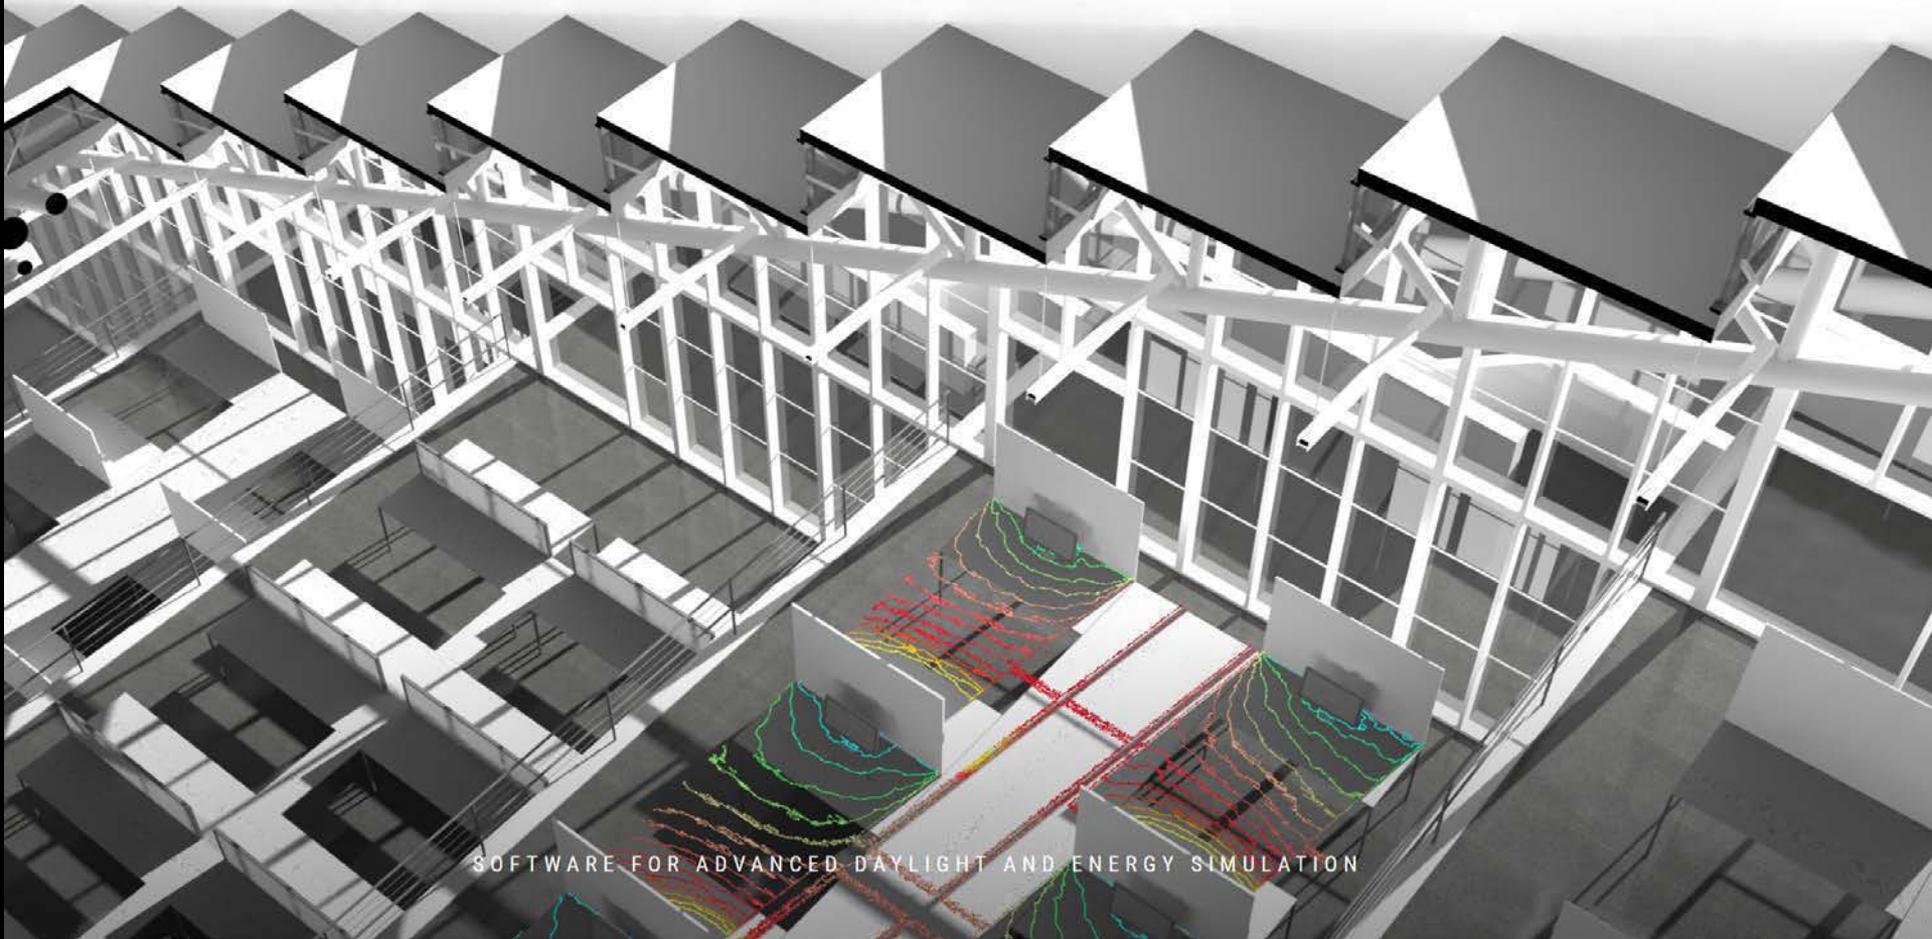

You will be needing the following programs (latest version always):

- [Rhinoceros3d](#)
- [DIVA4](#)
- [Climate Consultant](#)

# Workflows - Rhino

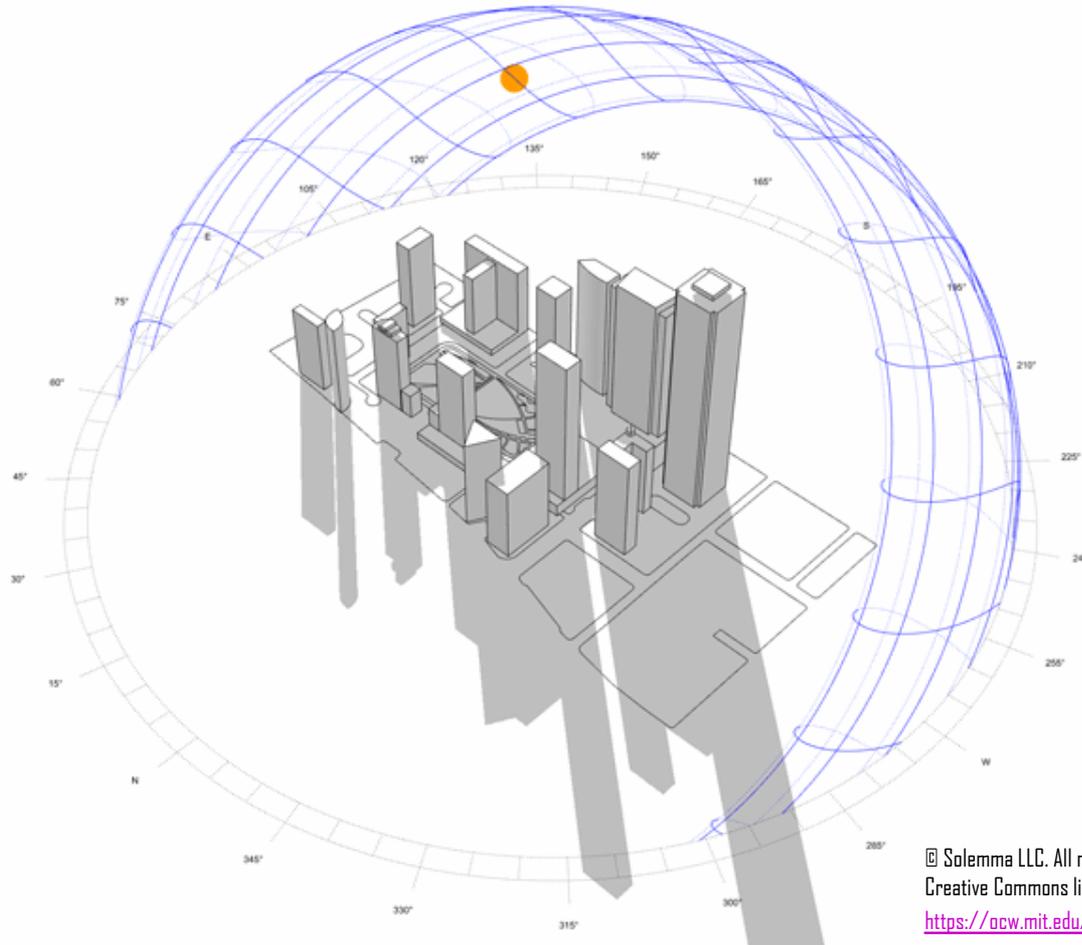

❑ **Rhino and Grasshopper** form the CAD backbone of all environmental analysis tools that we will be using in this class. You should ideally have a working version of Rhinoceros 5 or 6 installed on your laptop or workstations.

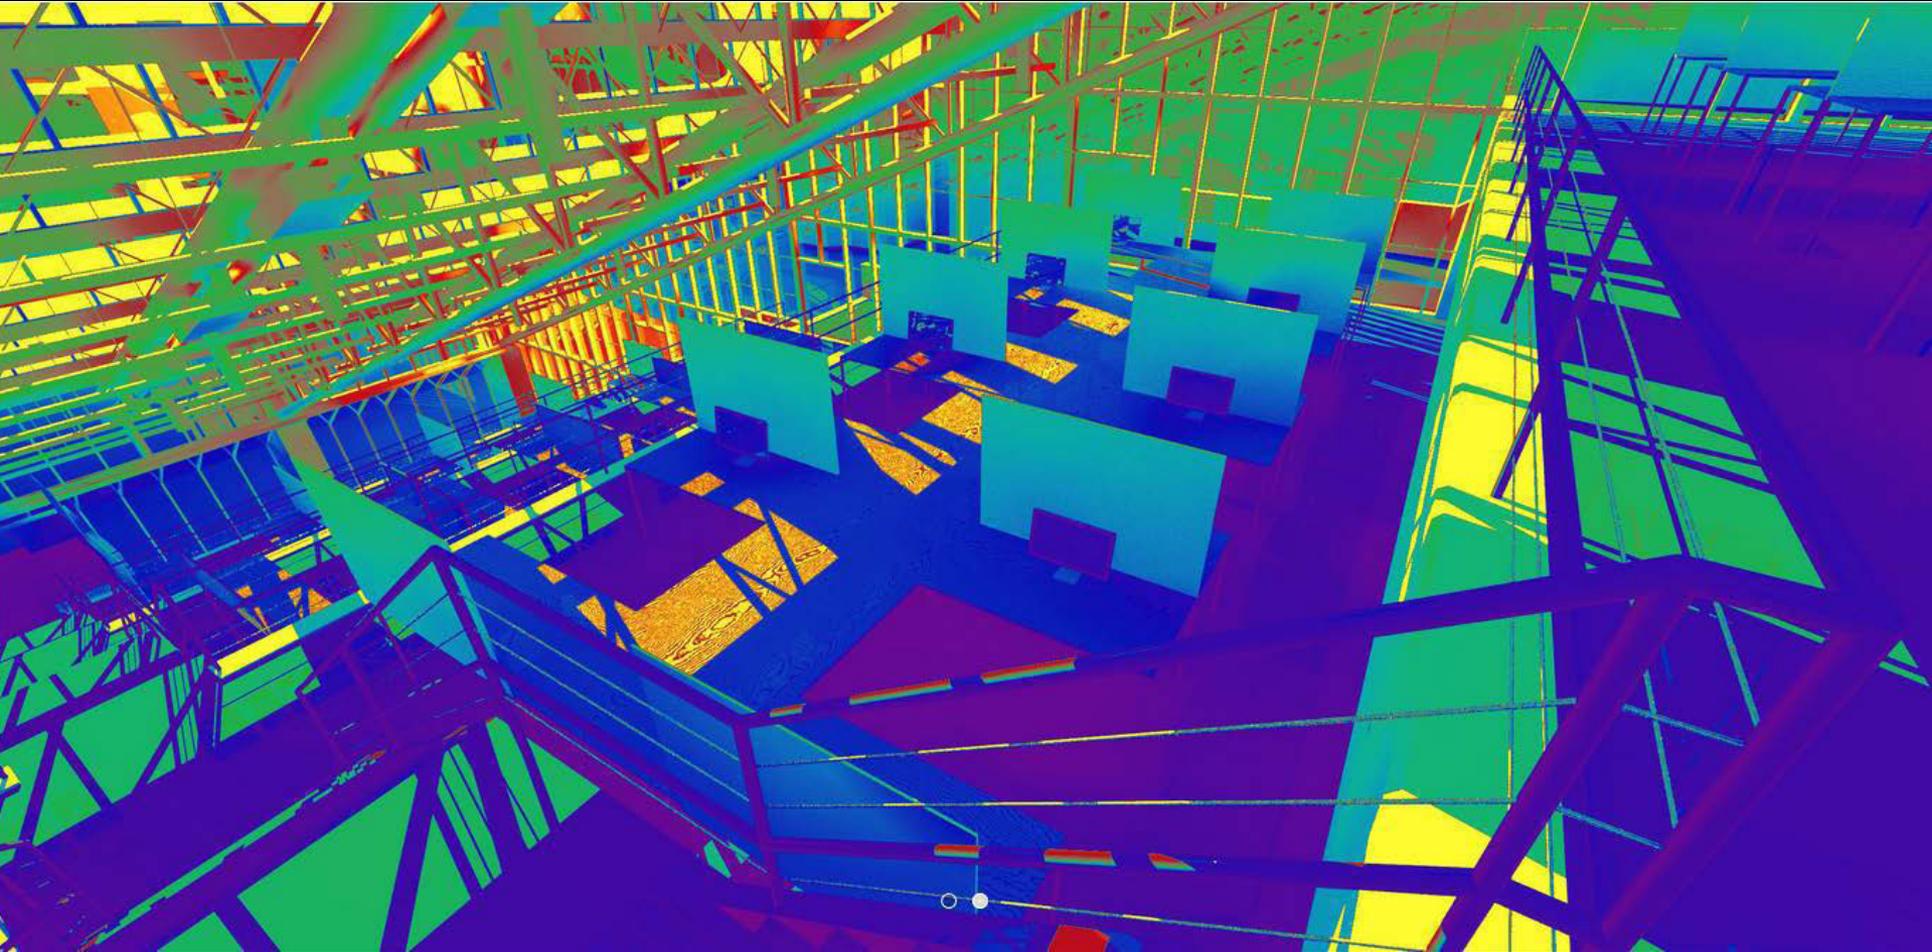

**DIVA-for-Rhino** is a daylighting and energy modeling plug-in for Rhinoceros 3D ([www.Solemma.com](http://www.Solemma.com)). We will be using DIVA for assignments on solar radiation, daylighting and energy analysis. Students may request free licenses for their laptops from the Solemma web site or use DIVA on the MIT lab computers. Please note that you need a **Windows Version of Rhino 6.0** or higher to run DIVA.

# Link to Studio

- ❑ Ultimately, it is up to you and your studio critic to implement sustainable design features in your projects.
- ❑ If you need help with your design projects there is a group of students in Building Technology who are prepared to help you. Some of the leading research on environmental building performance analysis is done at MIT. Make use of that knowledge.
