1. A. Sketch $\mathrm{V}(\mathrm{x})$ for an infinite one-dimensional box,

$\mathrm{V}(\mathrm{x})=|\mathrm{x}|>\mathrm{L} / 2$
$\mathrm{V}(\mathrm{x})=|\mathrm{x}|<\mathrm{L} / 2$
Draw in the energies of the $\mathrm{n}=2$ and $\mathrm{n}=3$ levels and specify the number of internal nodes in $\psi 3$.
B. Sketch the wavefunction for the state that has one internal node.
C. What is $\psi_{n}(0)$ for all odd $n$ ?
D. What is $\psi_{n}(0)$ for all even n ?
E. The momentum, $p$, for the particle inside the box

$$
p_{n}= \pm\left[2 \mathrm{mE}_{n}\right]^{1 / 2} .
$$

Sketch the probability distribution $\mathrm{P}(p)$ for the momentum of a particle in an infinite onedimensional box.
