### 5.73

## Quiz 12 ANSWERS

1. 

The matrices for $\boldsymbol{x}$ and $\boldsymbol{p}$, evaluated in the harmonic oscillator eigenbasis, have the general nonzero matrix elements:

$$
\begin{aligned}
\langle n| X|n+1\rangle=x_{n, n+1} & =\left[\frac{\hbar}{2 \omega \mu}\right]^{1 / 2}(n+1)^{1 / 2} \\
& p_{n, n+1}
\end{aligned}=-i\left[\frac{\hbar \omega \mu}{2}\right]^{1 / 2}(n+1)^{1 / 2} .
$$

A. $\boldsymbol{x}$ and $\boldsymbol{p}$ are Hermitian. Write the "other" nonzero matrix element (be careful about $\mathbf{p}!$ )
$\boldsymbol{x}_{n+1, n}=\left[\frac{\hbar}{2 \omega \mu}\right]^{1 / 2}(n+1)^{1 / 2}$
$\boldsymbol{p}_{\mathrm{n}+1, \mathrm{n}}=+i\left[\frac{\hbar \omega \mu}{2}\right]^{1 / 2}(n+1)^{1 / 2}$
B. What are the general "selection rules" for nonzero matrix elements of $\boldsymbol{x}$, $\boldsymbol{p}$, and $\boldsymbol{x}^{2}$ ?

For $\boldsymbol{x}, \Delta \mathrm{n}= \pm 1$
For $\boldsymbol{p}, \Delta \mathrm{n}= \pm 1$
For $x^{2}, \Delta \mathrm{n}=0$ and $\pm 2$
C. If you multiply $\boldsymbol{x}$ times $\boldsymbol{x}$, the matrix multiplication cartoon helps:

Based on the cartoon, what is the general selection rule for nonzero matrix elements of $\boldsymbol{x}^{\mathrm{k}}$ ?

```
\Deltan=\pmk, \pm(k-2),\ldots.\pm1 (if k is odd) or 0 (if k is even)
```
