# Basic counting principle

- r stages
- $n_i$  choices at stage i

- Number of choices is:  $n_1 n_2 \cdots n_r$
- Number of license plates with 3 letters and 4 digits =
- ... if repetition is prohibited =
- **Permutations:** Number of ways of ordering *n* elements is:
- Number of subsets of  $\{1, \ldots, n\}$  =

# Example

- Probability that six rolls of a six-sided die all give different numbers?
- Number of outcomes that make the event happen:
- Number of elements in the sample space:
- Answer:

### Combinations

- <sup>n</sup>
   k): number of k-element subsets

   of a given n-element set
- Two ways of constructing an ordered sequence of k distinct items:
- Choose the k items one at a time:  $n(n-1)\cdots(n-k+1) = \frac{n!}{(n-k)!}$  choices
- Choose k items, then order them (k! possible orders)
- Hence:

$$\binom{n}{k} \cdot k! = \frac{n!}{(n-k)!}$$
$$\binom{n}{k} = \frac{n!}{k!(n-k)!}$$

$$\sum_{k=0}^{n} \binom{n}{k} =$$

#### **Binomial probabilities**

• *n* independent coin tosses

$$- \mathbf{P}(H) = p$$

- P(HTTHHH) =
- P(sequence) =  $p^{\# \text{ heads}}(1-p)^{\# \text{ tails}}$

$$\mathbf{P}(k \text{ heads}) = \sum_{k-\text{head seq.}} \mathbf{P}(\text{seq.})$$

= (# of k-head seqs.) 
$$\cdot p^k (1-p)^{n-k}$$

$$= \binom{n}{k} p^k (1-p)^{n-k}$$

### Coin tossing problem

- event B: 3 out of 10 tosses were "heads".
- Given that B occurred, what is the (conditional) probability that the first 2 tosses were heads?
- All outcomes in set B are equally likely: probability  $p^3(1-p)^7$
- Conditional probability law is uniform
- Number of outcomes in *B*:
- Out of the outcomes in *B*, how many start with HH?

#### Partitions

- 52-card deck, dealt to 4 players
- Find P(each gets an ace)
- Outcome: a partition of the 52 cards
- number of outcomes:

#### 52!

## 13! 13! 13! 13!

- Count number of ways of distributing the four aces: 4 · 3 · 2
- Count number of ways of dealing the remaining 48 cards

• Answer:

$$\begin{array}{r}
 4 \cdot 3 \cdot 2 & 48! \\
 \underline{12! \ 12! \ 12! \ 12! \ 12! \ 12! \ 12! \ 12! \ 12! \ 12! \ 12! \ 13!$$
