Finger Exercises Lecture 2

The questions below are due on Wednesday September 14, 2022; 03:00:00 PM.

1) Question 1 of 1

Assume you are given a variable named `number` (has a numerical value). Write a piece of Python code that prints out one of the following strings:

- positive if the variable `number` is positive
- negative if the variable `number` is negative
- zero if the variable `number` is equal to zero

```python
# Write your code here
```

You have infinitely many submissions remaining.

Here is the solution we wrote:

```python
if number > 0:
    print('positive')
elif number < 0:
    print('negative')
else:
    print('zero')
```
