

Readings Study Questions **LECTURE 34**

on Rosenzweig Chapters 13 (pages 399-432) and 15 (469-501)

1. What are the functions of the different regions of the hypothalamus? Give evidence for each function.
2. What are the two kinds of thirst, and how are they triggered?
3. What is leptin? How does it achieve its effect?
4. How does the injection of adrenaline affect our emotional responses? What point does this illustrate?
5. What is the Kluver-Bucy syndrome? Why was this an important experiment?
6. What is the amygdala? What function does it serve?
