Problem Wk.2.2.4: From point A to point B

Define a procedure `pointDist(x1, y1, x2, y2)` that returns the distance between a point in two-dimensional space with coordinates \(x_1, y_1\) and another point with coordinates \(x_2, y_2\). Use `math.sqrt` (of type `num -> float`). Your function should have type `(num, num, num, num) -> float`.
