Part 1: Constructing a Signal 1

Enter a Python class definition for the following Triangle signal, which takes a positive argument $h$ which defines the height of the triangle. Your class should be a subclass of the Signal class, as defined in the software lab 3 handout.

The constructor $\text{Triangle}(h)$ must produce a signal is equal to

- $h - |n|$ for $-h < n < h$
- 0 otherwise

note that $|n|$ is the absolute value of $n$.

```python
class Triangle(Signal):
    def __init__(self, h):
        self.h = h
    def sample(self, n):
        if -self.h<n<0:
            return self.h+n
        if 0<=n<self.h:
            return self.h-n
        return 0
```

This is the answer we wrote:

```python
class Triangle(Signal):
    def __init__(self, h):
        self.h = max(h,0)
    def sample(self, n):
        if abs(n)>self.h:
            return 0
        else:
            return self.h-abs(n)
```
Part 2: Constructing a Signal from other Signals

Enter a Python expression (and set it equal to trapezoid), to construct the following signal.

trapezoid: the signal is equal to

- 0 for n <= 0
- 1 for n=1
- 2 for 2<=n<=6
- 1 for n=7
- 0 for n>= 8

Your answer should use the Triangle signal defined in Part 1, and any of: ConstantSignal, UnitSampleSignal, CosineSignal, StepSignal, SummedSignal, ScaledSignal, R, Rn and polyR (defined in software lab 3 handout). If you need to construct a polynomial, use poly.Polynomial([...]).

```python
# Use any of: Triangle, ConstantSignal, UnitSampleSignal, CosineSignal, StepSignal,
# SummedSignal, ScaledSignal, R, Rn and polyR (defined in sw 4 handout).
# They are all defined for you already.
trapezoid = SummedSignal(Rn(Triangle(4),4),-1*Rn(Triangle(2),4))
```

This is the answer we wrote:

```python
trapezoid = SummedSignal(SummedSignal(Rn(Triangle(2),2),
               Rn(Triangle(2),4)),
               Rn(Triangle(2),6))
# Another way of doing it.
#trapezoid = polyR(Triangle(2), poly.Polynomial([1, 0, 1, 0, 1, 0, 0]))
```

Part 3: Enable Submit

Current time is: 3/1/2011, 9:12pm

Click Submit before: 2/24, 9:50am

The Check button will update the current time.

Enter Done below
and click Submit.

If this problem is submitted past the due time, this subproblem will be marked incorrect.

24 checks left

This is a multi-part problem, each part has its own Save and Check buttons but there is ONLY ONE Submit button for the WHOLE problem. Finish working on all the parts before you click on Submit.
