Texting with Angel

Special Thanks to: Anthony Morelli
Requires: Transaction Page

Summary on Transaction Pages under “Angel Overview” on the course site.
Create Transaction Page and place appropriately in call flow.
Enter the shown URL, and select “POST”
Label two parameters
1) Being “number”
2) Being “message”

“number” must be associated with a variable that has the number you want to text.

“message” should be the a variable contains the message as a string

*If you want to make a cohesive message using multiple stored variables, consider using a logic page to transform and combine variables.
To test whether or not the script works, enter your number and a message you want to receive.
You must interpret the response as TTS.
To add a page this can go to, simply push the arrow and select the next state.
