第二課  Di-èr kè  
Lesson 2

他一我百，他十我千。
Tā yī wǒ bǎi,  tā shí wǒ qiān.  
Others 1 me 100, others 10 me 1000.  
Describing one’s determination to outdo others to succeed.

2.1 Review

2.1.1 Compound characters

As noted in Unit 1, the majority of characters can be resolved into two immediate constituents which, allowing for minor modifications, can stand alone as characters in their own right. The configuration of constituents can be horizontal (囗/冂 guó ‘country’), vertical (李), or clustered (国/國 guó ‘country’). The most recurrent of these constituents serve as tags for classifying characters into groups for purposes of retrieval (in dictionaries or filing systems, for example). Thus, compound characters with the component 囗 kǒu ‘mouth; entrance’ can be grouped together: 吃, 喝, 喝, 呢; or those with 言/yán ‘speech’: 說, 說, 話, 话, 請, 請, 誰, 誰. These classificatory elements are traditionally called ‘radicals’, and are named individually according to either the configuration or the general meaning of the component: thus 囗 kǒu ‘mouth; entrance’ on the left is called kǒuzìpánɡ (‘mouth-character-beside’) in Chinese, or ‘the mouth radical’ in English; 雨/yǔ ‘rain’ on the top (零) is called yǔzìtóu ‘rain-character-on top’ in Chinese, or the ‘rain radical’ in English. Here, for review, are some of the Unit 1 compound characters organized by radical:
Note: Where the combining form of the radical cannot be printed on it own, the equivalent free form – if one still exists – is given in parentheses; if no free form is current, the parentheses enclose a blank.

![Image of pawn shop sign](image.jpg)

**Figure 1:** 押 yā ‘pawn; pledge; mortgage’ – the sign for pawn shops.
a) ‘be the case’, like 明 and 昨, assigns 日 ‘sun’ as radical (in this case combined vertically with 爻). One [nonsense] account of the graph goes: ‘the sun, over the horizon (the horizontal stroke) feeding sustenance (“being”) through the vertical pipe – with a valve – to mankind (人)’.
b) The graph 女, said to originate as a drawing of a woman, appears as ‘radical’ in 姓 xìng ‘surname<d>’, 她 tā ‘she; her’, and 好 hǎo ‘good’. 男 ‘man; male’ is a compound graph, with the elements 田 tián ‘field’ and 力 lì ‘strength’ arranged vertically (looking vaguely like a ‘man working in the fields.’) In colloquial speech, 女 and 女 appear in compounds such as nánde and núde, with de representing the possessive and attributive marker (ie, ‘the male one’ and ‘the female one’).
c) 第 dì introduces the ‘bamboo’ radical, which when appearing on top is called zhúzìtóu ‘bamboo-character-on top’. The radical appears in graphs associated with bamboo (eg 筷子 kuàizi ‘chopsticks’) or with properties of bamboo such as segmentation (節 jié ‘segment; program’) or splitting (笑 xiào ‘laugh’). The ‘body’ of 第 contains 弓 gōng ‘a bow’, which appears as the assigned radical of 張 zhāng.
d) 小 xiǎo ‘small’ is to be distinguished from 少 shǎo ‘few’. The stroke order is dominant (the gōu-stroke), followed by left and right diǎn – as in the body of 你 nǐ.
e) The surnames: 馬 ‘horse’, originating as a drawing of the animal, is used for its sound value in 嗨 má and 媽 má, but is assigned as radical in graphs used for words connected with horses, such as 騎 qí ‘to straddle; ride’ (cf §2.6.5 below). The graph 陳, also a surname, contains 東 dōng ‘east’ (use for its sound value) and a radical called ‘left ear’ in Chinese: 耳 ěr ‘right ear’ and is considered a different radical (and in fact, has a different source character historically). 张, the last of the three surnames introduced in this set, contains 弓 gōng ‘a bow’ (seen in 第), and 長 cháng ‘long’, used for its sound value.
f) The right hand element of 誰 tuǐ ‘push’ (cf §2.8), should be noted as ‘8 strokes’ in order to distinguish it from another commonly occurring element in compound characters, 住 zhù ‘live’, with only 7.
g) The element on the left of 这 (sometimes printed with two dots instead of one) is a left-side version of a more complex graph, 這, whose meaning is ‘stopping and starting’. As a radical, it goes under the name of zǒuzhì, and appears in graphs such as 迎 yíng ‘welcome’ and 近 jìn ‘near’. 言, which is given radical status when it appears on the left of the graph (or at the bottom), forms the core in this case. Notice that when it is a core element, 言 does not simplify to 讠 as it would if it were the radical; instead, the graph 语 wén ‘language’ (see §2.3 below) is used (这), presumably because its first two strokes match those of 言.
h) 者 zhě is the root element of a set that includes 都 dōu, 煮 zhǔ ‘to boil’ and 堵 dǔ ‘to obstruct’. (Can you identify the radicals of each?) Though there is no simplified version of 都, the element on the right (you’èrduō) which is assigned as its radical, is written with three strokes in the traditional set, but only two in the simplified. A [nonsense] account of the graph, 都, goes: ‘土 ‘earth’ over 日 ‘sun’, connected by a line (丿) to suggest ‘all; everything’, with the ‘3’ at the right indicating ‘all’ 3 states of matter.’

Questions

1. 谁是第一？
   第一是男的吗

2. 第二是不是姓李？
   第二忙不忙？

3. 第三姓陈吗？
   他今天很累吗？

4. 第四是男的吗？
   他吃饭了没有？

5. 第五是不是小白？
   她上班了吗？

6. 第六是男的吗？
   他今天忙不忙？

7. 第七姓马吗？
   她吃了没有？

8. 第八是女的吗？
   她下班了没有？

9. 第九已经上班了吗？
   他吃了吗？

10. 第十也吃了吗？
    她姓陈吗？

2.3 Second set

學生 老师 点儿
3+13 5+0 6+0 3+7 12+5 2+6

学 师 点儿
3+5 3+3 4+5 2+0
xué shēng láo shī diǎn ér > r
study; school pupil old teacher point; bit diminutive
Notes:
(a) A nonsense account of 學 goes: ‘a child looking at a blackboard on a stand; the backboard has two x’s, each registered on both sides’. For 生 ‘be born; pupil’: ‘three horizontals represent the three stages of life – youth, maturity, old age, with the first marked (with a piē) as the time of education’.
(b) 老 (‘old’) is itself a radical (as indicated by the numerical designation, 6+0), though one occurring in very few characters. To be distinguished from the left-hand side of 都. Think ‘elderly person taking a rest under an awning’. 師/師, with 衤 ‘cloth’ (3 strokes) designated the radical: ‘teacher wearing a mortar-board, standing before a podium covered by a cloth.’ (The right-hand element of 師/師 – the podium – has a clear top, unlike the graph 市 shì ‘market; city’, which has an extra dot.)
(c) In 點, ㄆ is phonetic (cf. 店 diàn ‘shop’) and the radical is 黒 hēi ‘black’ (with the 4 dots, a combining form of the fire-radical); hence ‘specks [of soot]’ and ‘a little bit’. 兒, originally a picture of a child with a large head, appears in compounds such as 兒子 érzi ‘son’ and 女兒 nǚ’ér ‘daughter’ and has a root meaning of ‘child’. 兒 is one source of the noun suffix -r (seen in words such as yìdiǎnr).
(d) 怎 and 昨 are members of a phonetic set based on the element 乍 zhà. 怎 is simplified by letting a part of the original stand for the whole: 怎 > 么. In the traditional form, the lower right element has two slightly different variants: 廈 and 么. A nonsense account: ‘a shed (广), 2 trees (木), and a nose (么) sniffing them to find out WHAT they are’. 樣 yàng consists of 木 as radical (mùzipáng), 羊 yáng (a phonetic element), and 永 yǒng; possibly originally referring to a wooden mould, thence ‘type; kind’.
(e) In both 对 > 对 and 難 > 难, the complicated left hand elements are replaced with the simple 又 (yòu). In 難, 佳 (zhuī) is assigned as radical; in 言, 言 is
radical, 隹 is phonetic (zhuī / shuí ~ sheí). The left-hand side of 难 shows 夫 inserted through a flattened 口.

f) 文 wén originally meant decoration (and was probably a drawing of a design); later it came to mean written language, and is now often used for language in general. The earlier meaning of ‘decoration’ is now represented by 纹 wén (with the silk radical).

Figure 2: Hong Kong: 藥/药 yào 'medicine'
Exercise 2

第一： 她姓毛，是女学生；今天有一点儿累。
第二： 他姓陈，是男学生；他有一点儿忙。
第三： 他姓张，是大学的老师；今天是第一天，他很忙。
第四： 她姓白，是小学的老师；昨天很累，可是今天好了。
第五： 她姓林，是中学的老师；今天没有课。
第六： 他姓周，是男学生；是张老师的学生。
第七： 他姓马，是男学生；今天有点儿饿，还没吃饭呢。
第八： 她姓王，女的；是老师，昨天是她的生日。
第九： 他姓林，男的；中文老师，还没上班。
第十： 她姓李，女的，学中文；中文不太难。

Questions

1. 姓马的是男的，对吗？
2. 姓毛的是不是学生？
3. 姓周的没有老师，对不对？
4. 姓张的是小学的老师，对吗？
5. 姓白的今天很累，对吗？
6. 姓林的已经上班了，对吗？
7. 姓马的今天怎么样？
8. 今天是王老师的生日，对吗？
9. 姓张的今天怎么样？
10. 谁是学生，谁是老师？
11. 姓林的是男的还是女的？
12. 老师是不是都是男的？
生字 shēngzi ‘vocabulary (raw-characters)’

姓马的 xìng Mǎ de [rén] ‘the one named Ma’；姓林的, etc.
小学 xiàoxué ‘elementary school’
中学 zhōngxué ‘high school’
大学 dàxué ‘university’
生日 shēngrì ‘birthday’
还是 hǎishi ‘or’ [with choice questions]

2.4 Third set

高 tāng 紧张 jīn zāng 倬 gè 现 xiàn 在 zài
10+0  6+9   3+8   2+8   4+7   3+3

gāo   jìn   zhǎng    gè   xiàn   zài

tall   tight   spread   individual   manifest   now

起来 qiǎn 看报 kàn bào 以前 yǐ qián
7+3   2+6   5+4   3+9   2+3   2+7

dǐng   kàn   bào   yǐ   qián

来 lái    报 báo
1+6      3+4   2+2
rise    report    [take]  before; front
但可 那 哪 走

2+5        3+2  3+4 / 2+4  3+7 / 3+6  7+0
dàn        kě nà; nèi nà; nèi zǒu
but  able  that which walk; leave; go

a) 高 gāo, used as a surname, but also a SV ‘tall’; think of the graph as representing ‘a tall structure (with a flat roof and a chimney)’.
b) 緊張/紧张. Recall the radicals: 絲 the silk radical (twisted); and 弓, representing a bow (under tension). Both suggest ‘tension or anxiety’.
c) 個, the simplified version of 個, is an old handwriting form elevated to formal status in the new simplified set.
d) 現 (like 班 and many other graphs) contains the element 王 as radical. Though the element is virtually identical with the surname 王 Wáng (‘king’), it actually derives from the combining form of a different character: 玉 yù ‘jade’ (found intact in the simplified 国 guó ‘country’). So traditionally, the radical is called yúzìpáng ‘jade character at the side’; but on the Mainland at least, it is also called wángzìpáng ‘king on the side’.
e) 起 contains 走 as radical and 己 jǐ, as phonetic; cf. graphs such as 超 and 越 which are formed along the same lines. 來, originally a drawing of a kind of cereal grain, cf. 參 mài ‘wheat’, which is now differentiated from 來 by the lower radical element. The meaning of ‘come’ may represent a metaphorical extension (grain > sprouting > coming out); or the graph may have been borrowed to represent a near homophone.
f) 看 contains 手 ‘hand’ and 目 ‘eye’ (both of whose earlier forms suggest drawings); hence ‘hand over the eyes, looking’. 報/報 bāo ‘report; newspaper’, with the right-hand component looking like ‘a comfortable armchair where you might read the paper’. (Note the symmetry of the left-hand side of the traditional graph.)
g) 以 yǐ has 人 as its radical. In the modern language, the syllable is a common ‘bound form’, occurring in words such as 可以 kěyǐ and 所以 suǒyǐ; but in the classical language, it appears as a verb with the meaning of ‘take’. So 以前 is literally ‘take as before’. In the simplified set, 以 is written with 2 strokes.
f) 那 nà ‘that’, with 比重 duō ‘right-ear’ (or 比重 zòng) assigned as radical (cf. 都). 哪 nǎ, the question word, has kǒuzìpáng as its radical.

Exercise 3
Answer the questions at the end, taking your cue from the information given in the ‘chart’ below. Note that the chart takes the form of lists: ‘3 students: 1 male, 2 female’. The questions (like your responses) have the form of sentences: ‘The students are all female, right?’

第一：三个学生，一个男的，两个女的；
他们都已经起来了，可是还没看今天的报。

第二：一个学生，一个老师，都是男的；
她们以前很累，但是现在好了。

第三：两个老师，一个中文老师，一个日文老师；
他们已经下班了。

第四：一个中文学生，没有老师；
中文很难，他很累。
第五：四个学生，都很紧张；
        都是陈老师的学生。

第六：五个学生，两个老师；
        学生很紧张，老师很忙。

第七：一个男的，一个女的；
        男的起来了还没吃饭呢；女的已经走了。

第八：两个学生，一个对，一个不对；
        一个是 MIT 的，一个不是。

第九：两个学生，一个姓张，一个姓高。
        姓张的很紧张，可是姓高的还好。

第十：十个学生，都是张老师的学生。
        张老师的学生很忙也很累。

Questions

1. 第六，学生，老师都很紧张吗？
2. 第二，他们还是很累吗？
3. 第三，那两个老师是中文老师吗？他们下班了没有？
4. 第八，谁对，谁不对？
5. 第四，学中文，没有老师，难不难？
6. 第十，谁的学生都很忙很累？
7. 第五，那四个学生怎么样？
8. 第一，学生都是女的，对吗？今天的报看了，但是昨天的还没看，对不对？
9. 第七，他们两个已经走了，对吗？已经上课了。
10. 第九，姓陈的是学生但是姓张的不是，是老师，对吗？
2.5 Fourth set

(甚)  甚  甚  甚  甚  甚  甚
5+4  3+11  4+4  6+0  4+0  4+12

什麼  甚  甚  甚  甚  甚  甚
2+2  1+2  1+4  xī  xī  xī  xī

什  么  东  西   手  機
書包  筆  車子  傘  貴

書  笔  車  伞  貴

字典  行  您

2) Simplification is not a new process; it has been going on since the creation of the writing system. It continues even in the traditional set. The first character of 什麼, for example, is an older simplification of 甚 that substitutes the phonetically close 十 for the more complicated original, then marks it with rénzìpáng. The 台 of 臺北 is another substitution that has gained currency in the traditional font as an alternative for original 臺. Both simplifications have a long history, and have
now gained acceptance in Taiwan and traditional communities. Both can now be used in the traditional set.
b) East, in its traditional form (東) shows ‘dawn in the east, with the sun (日) coming up through the trees (木)’. The characters, 東西/東西, suggest that the compound is derived from ‘east-west’, ie the plane of existence, ‘where all things are’. 東 was employed as a phonetic element in 陳, and the relationship remains in the simplified set: 东/陈.
c) 手 ‘hand’, itself a radical (with a pictographic origin), has a rather different combining form, seen on the left of characters such as 报· 把· 拉· 拍. The traditional version of the two graphs (機/机), with its complicated right-hand element, is more suggestive of the meaning ‘machine’. (Cf. 飛機/飞机 fēijī ‘airplane’).
d) 書 consists of 聿 yù ‘a writing implement’ and 日, the latter, distinct from 日. In 筆, 聿 is determined by the element at the top, the bamboo radical (a combining version of 竹 zhú ‘bamboo’; early writing implements – brushes – were made out of bamboo). 包, whose root meaning is ‘to wrap’ or ‘a bundle’, looks a bit like a bundle.
e) The rule of 5: characters like 書 (or 筆 bǐ ‘writing implement’ that also contains 聿), which exhibit many horizontal layers are sometimes difficult to resolve. Fortunately, for many such graphs, the RULE OF 5 applies. The rule of 5 (for characters) states that if the character seems to have a lot of horizontal levels, it has five! Boxes count as one layer; boxes with an internal horizontal (日) count as 2, etc. 書 (as well as 聿, 筆) is an example; so is the left-hand side of 南 難 (the top counts for 2, the box 1 and the lower horizontals, another 2, for a total of 5).
f) The traditional form 車, originally a drawing from overhead of a cart, is itself a radical (appearing in characters such as 輪, 輛, 車). The graph 子 zǐ (distinct from 字 zì ‘written character’) was originally a drawing of a child. If fully toned, it generally means ‘young; child of; seed of’: 王子 wángzǐ ‘prince (king’s son)’, 天子 tiānzǐ ‘emperor (son of heaven)’, 松子 sōngzǐ ‘pine nut (child of pine)’, 蝦子 xiāzǐ ‘shrimp roe (child of shrimp)’. However, in its untoned form, 子 acts as a noun suffix, appearing with nouns that refer to things from everyday life: 椅子 yīzǐ ‘chair’; 鼻子 bīzǐ ‘nose’; 板子 bānzi ‘spanner; wrench’.
g) 傘/伞, both look like umbrellas.
h) 貴/貴 guì ‘expensive’ introduces the important element 貝/贝 bèi, a graph that is said to originate as a drawing of a cowrie shell, used as currency along the southwest coast of China in ancient times. 貝/贝 appears as radical in characters for many words having to do with transactions, such as 買 mǎi ‘buy’, 販 mǎi ‘sell’ and 寶 bǎo ‘valuable’.
i) 字 zì ‘characters’ (perhaps ‘a child, 子, under a roof, studying characters’). 典 is said to be composed of 册 ‘classic books’ on a stand, suggesting ‘a repository of information’.
j) 行 is its own radical (said to have originated as a picture of crossroads). It generally combines with other elements placed internally, eg 街, 衍. The core meaning of xíng is 'street; walk', or by extension, 'to work (of machines)', 'be okay' etc. The same graph is also used for hàng 'row', and by extension (via things that are arranged in rows), 'firm; business', eg 銀行 yínháng 'bank (silver-business)'. The word has entered English historical writing, from Cantonese, as 'hong', meaning ‘factory; warehouse’.

2.5.1 Reading in Fānǐzhì:

a) A Narrative:

王明是中文老師，有十二個學生。他們已經上課了。中文很難，但是學生都好，都行。今天九月一日，上學第一天。老師學生都很緊張，很忙，也很累。那兒有個學生姓陳，男的。小陳的中文很好。他也是王老師的學生。他今天沒有飯吃，很餓。很餓，上課不行，對嗎？

Questions

1. 王明是學生嗎？
2. 老師有二十個學生，對嗎？
3. 他們上班了嗎？
4. 中文怎麼樣？
5. 王老師的學生怎麼樣？
6. 學生緊張嗎？
7. 姓陳的是男的嗎？
8. 小陳的中文怎麼樣？
9. 他是誰的學生？
10. 不吃飯，上課，行不行？

b) A Dialogue:

小马
小张，你好。

小张
小马，你好。今天怎么样？

很累，你呢？

我呢，不饿，我已经吃了。

还行。好，那，我走了。

不，今天没课。

明天见。

好吃吗？

上课了吗？

好，那，明天见吧。
Exercise 4.
Answer the questions below by checking the information in the following table:

<table>
<thead>
<tr>
<th>第一</th>
<th>手机</th>
<th>高老师的</th>
<th>有一点贵</th>
</tr>
</thead>
<tbody>
<tr>
<td>第二</td>
<td>毛笔</td>
<td>学生的</td>
<td>不太贵</td>
</tr>
<tr>
<td>第三</td>
<td>小车子</td>
<td>大学的</td>
<td>有一点儿贵</td>
</tr>
<tr>
<td>第四</td>
<td>书包</td>
<td>小李的</td>
<td>不贵</td>
</tr>
<tr>
<td>第五</td>
<td>中文字典</td>
<td>周老师的</td>
<td>不贵</td>
</tr>
<tr>
<td>第六</td>
<td>伞</td>
<td>李明的</td>
<td>好看，可是不贵</td>
</tr>
<tr>
<td>第七</td>
<td>书</td>
<td>小毛的</td>
<td>不贵</td>
</tr>
</tbody>
</table>

Questions

1. 第一是什么东西？
2. 第一是谁的？
3. 毛笔贵不贵？
4. 学生有毛笔吗？
5. 小车子贵不贵？
6. 小李的东西是什么？
7. 周老师有什么样的字典？
8. 李明的伞怎么样？
9. 有书的姓什么？
10. 您贵姓？
11. 你是不是学生？

2.6 Form of characters

Traditionally, Chinese characters are subdivided into six categories according to the way they are thought to have been formed. These categories are called the 六书 liù shū ‘six scripts’, and include graphs that are derived from drawings (like 马 mǎ ‘horse’ the earliest versions of which look quite like horses), those that are formed as indications (like 上 and 下, which represent meaning diagrammatically), or those that are borrowed (like the graph 不 which was borrowed to represent a word of near identical sound, like 4 in the shorthand 4U.)

Though the ‘six scripts’ are sometimes claimed to be descriptive, in fact it requires considerable historical knowledge to decide to which type a graph belongs. For the beginner, seeking a way to gain a foothold on the sheer face of the [written] language
by trying to rationalize the relationship between the sound/meaning of a word and the form of its character, there are only two useful kinds of relationship. One is pictorial, or representational: the shape of the character suggests its meaning; 上 ‘on’, 下 ‘under’, 中 ‘middle’, 心 ‘heart’. The other is relational: the character resembles another of the same or similar sound: 馬 ‘Q’, sounds like 馬 mǎ ‘horse’ or 媽 mā ‘mother’. These two types can be labeled ‘representational’ and ‘phonosemantic’, respectively. The former are often cited for their pictorial qualities; but it is the latter – the phonosemantic – that are the most common. New characters are almost always created on the phonosemantic model (cf. Unit 3 Characters).

2.6.1 Representational characters
As noted earlier, compound characters are those that can be decomposed into constituents that are themselves characters (or combining versions of characters). Non-compound characters, such as 中, 馬 or 王 (or the parts of compound characters such as 女, 生, 木 and 日) can be called ‘simplex’. It is probably true that most simplex characters derive ultimately from drawings or indications that relate to the original meaning of the graph. The following characters all have forms that can be rationalized fairly easily in terms of their meaning:

一 二 三 上 下 中 必 火 雨
yī èr sān shàng xià zhōng xīn bì huǒ yǔ
one two three on below middle heart must fire rain

米 木 月 山 凸 叉 弓 鱼/魚 鸟/鳥 伞/傘
mǐ mù yuè shān tū chà gōng yú niǎo sǎn
rice (tree) moon hill convex fork bow fish bird umbrella

A particular graph can be viewed as representational regardless of whether the historical data supports the notion. Thus, if you agree that 伞/傘 sǎn ‘umbrella’ looks [vaguely] like an umbrella, then you are regarding it as representational – and that image can be of use in helping you recognize it. Similarly, once the graph for 心 ‘heart’ is known, ie 心, then 必 bì ‘must; have to’ can be viewed as representing the notion of obligation as ‘a line crossing the heart’. Conversely, the pictorial features of the graph for 象 ‘elephant’, 象, may not be evident until someone makes the connection either by citing a more realistic earlier graph, or by drawing attention to a trunk, head, body, tail, etc.

Beginning students show great skill at creating nonsense etymologies (even for compound characters). Thus the character 哭 kū ‘to cry’ is seen as ‘two eyes and a tear’; or 電/电 diàn ‘electricity’ is seen as ‘an appliance with an electrical cord running out the bottom’. Or – more extreme – 会 (会 in simplified form) ‘to be able; capable’ (among other meanings) is seen as Darth Vader, complete with helmet and breathing equipment – a man of impressive capabilities. But while it is useful to find representational elements
in complex characters, it is often not possible even with a high degree of creative license. There is not much to be said for, say, 皮 pí ‘skin’, 衣 yī ‘clothes’, or 亖 dòu ‘beans’. They are simplex (and may well derive directly from representations) but their forms are difficult to account for without historical research – or a very creative imagination.

2.6.2 Additive characters – or blends
A small set of compound graphs can be interpreted as semantic blends, in which the meaning of the whole seems to be related to both its parts. Occasionally, as in the (b) examples, both meaning and sound are involved.

a) Semantic blends
尖 jiān ‘sharp’, made up of 小 xiǎo ‘small’ and 大 dà ‘big’, ie ‘wedge shaped’;
忠 zhōng ‘loyal’, made up of 中 zhōng ‘middle’ and 心 xīn ‘heart’;
信 xīn ‘believe; letter’, made up of 亻 rén ‘person’ and 言 yǔ ‘language’;
孕 yùn ‘be pregnant’, made up of 乃 nǎi ‘exist’ and 子 zǐ ‘child’;
好 hǎo ‘be good; well’, made up of 女 nǚ ‘woman’ and 子 zǐ ‘child’, ie the paradigm of ‘goodness’;
尿 niǎo ‘urine’ made up of 亻 shī ‘body’ and 水 shuǐ ‘water’;
屎 shǐ ‘shit’ made up of 亻 shī ‘body’ and 米 mǐ ‘rice [grain]’.

b) Blends of sound and meaning (rare)
甭 bèng ‘no need to’, made up of 不 bù ‘not’ and 用 yòng ‘use’.
乒乓 pīngpāng ‘pingpong’, whose graphs represent a pingpong table, but which also take their sound from the graph, 兵 bīng ‘soldier’.

Blends are one of the traditional character types (one of the liūshū), but most cases represent more of an apparent than a real historical process of character creation. As with the simplex characters, students and teachers frequently ignore the historical facts and enlarge the category of blends with their own etymologies: 名 míng ‘name’ from 夕 xī ‘evening’ and 口 kǒu ‘mouth’, explained as ‘at dusk, you have to call out names to identify people’; or 木 dōng ‘east’, made up of 日 rì ‘sun’ superimposed on 木 mù ‘wood’ (originally ‘tree’) and explained as ‘sunrise through the eastern trees’; or 杯 bèi ‘cup’, made up of 木 mù ‘wood’ and 不 bù ‘not’, because ‘cups aren’t make of wood’.
2.6.3 Phonosemantic characters

Once the repertoire of characters begins to grow, it becomes more efficient to relate characters not to things (their referents), but to each other. Thus, as noted earlier, once 馬 mà ‘horse’ is learned, then it is easy to relate it to 马 mā ‘Q’, or 马 mā ‘mother’ — or eventually to 马 mǎ ‘ant’ and 马 mǎ ‘number’. The historical process that gives rise to such ‘phonetic sets’ is borrowing, followed by specification: 马 is borrowed to write words similar in sound (mother, ant, number, etc.); then to prevent confusion, the graph is specified (or particularized) by the addition of a classifying character (口, 女, 石 or 虫, etc.)

Many phonetic sets are quite regular, like the 马 set, or the following set based on 青 qīng (which, as a free form, means ‘green’ or ‘young’):

請，情，睛，清，樺，蜻，鯖
qǐng qíng qíng qīng qīng qīng qīng
invite feelings clear clean hydrogen dragonfly mackeral

In some cases, phonetic correspondences that were once regular have been obscured by historical changes in the language; such is the case for 饿 è and 我 wǒ, in the first case, 鍾 chén and 洞 dòng in the second) remains close but no longer identical. But even the ‘irregular’ sets show patterns of correspondence, as illustrated by the set based on 重 below, which either begins with zh or with d.

重，種，踵，腫，動，懂，董
zhòng zhǒng zhòng dòng dòng dòng
heavy category heel swell move understand to lead

The common sound elements are often called phonetics (shēngpáng in Chinese); and the specifying elements are called radicals (bùshù) — even though it is usually the phonetic elements that represent the historical root and the radicals, the additions. As shown at the beginning of this lesson, radicals do have concrete meanings (言 ‘speech’, 心 ‘heart’, 日 ‘sun’, 水 ‘water’ etc.), and initially the selection of a particular radical to form a compound character would have been inspired by meaning. But in many cases, the original impetus has been obscured by linguistic and cultural change. The presence of the water radical in 海 ‘sea’, 河 ‘river’ and 洗 ‘wash’ reflects a connection with water; but its presence in 漢 ‘Chinese’, 溫 wēn ‘warm’ and 活 huó ‘to live’ is harder to explain. Ultimately, the function of radicals in compound characters is one of differentiation: 活 is not 适 or 括; 漢 is not 難, 嘆 or 艱.

2.6.4 Character retrieval

Alphabetic writing systems, regardless of the regularity of their spelling, make use of relatively few symbols, so ordering titles for filing systems or words for dictionaries is a
matter of alphabetization – establishing an order for the symbols and remembering it. For character writing systems, in which the number of symbols ranges in the thousands, retrieval is much more problematical.

The most common method of ordering characters (and ultimately, retrieving them) was suggested by the large number of compound characters that arose from processes of borrowing and specification described above. Compound characters could be grouped by radical, and then subgrouped by number of additional strokes (the second of the figures written under each large-format characters introduced in the sets of characters in each lesson). Thus 請 could be found under the speech-radical, 言, amongst those characters with 8 (additional) strokes; 蟲 would be under the insect-radical, 虫, 8 strokes, etc. Simplex characters that were themselves radicals (such as 言, 日, 氣, 魚) would be listed at the head of their own set. Other simplex characters were brought into the same system by designating parts of their graphs – sometimes rather arbitrarily – to be radicals. Thus 中, 北, 甲 (all simplex) are assigned the radical | (the vertical stroke called shù); 也 is assigned the radical 乙 (even though the character does not contain a stroke of that shape); 元 is assigned 元, and so on.

Eventually, by Qing times (with the publication of the great ‘Kangxi’ dictionary), the number of radicals was settled at 214, ordered by stroke totals. Students of the language, like literate Chinese, who had to be able to look up characters efficiently or search through indexes ordered by radical, came to know the radical chart virtually by heart. Because of their important classificatory role, and because they are stable (each character having one radical assigned to it) and of fixed number, introductory textbooks have tended to focus on radicals (noting general meanings where possible) rather than phonetic sets. Yet both are useful, and in fact, the information on pronunciation obtained from phonetic elements is probably more useful to the learner (in allowing quick dictionary searches, for example) than the information on meaning provided by radicals (which is often too general to be of much use).

The radical system of retrieval is not the only one in use, but it remains one of the more popular systems for looking up characters in dictionaries or other reference works in cases where the pronunciation is not known. Adoption of the simplified set of characters was accompanied by some changes in the assignment of radicals, and altered the arrangement and number of radicals in the chart. The new system has 189 rather than the traditional 214.

The main difficulty in using the radical system is identifying the radical – particularly in simplex characters which are not themselves radicals and which were assigned a radical to make them conform to the system. Nowadays, most dictionaries are organized alphabetically by the pinyin pronunciation of the first character, but they also contain lists organized by radicals that allow you to look up characters when the pronunciation is unknown. But only one dictionary, The ABC Chinese-English Dictionary (cited in the bibliography), is organized by pinyin and word (rather than character), so that words (rather than characters) are ordered uniquely, irrespective of the particular character of the first syllable.
2.6.5 *An illustration*

The couplet illustrated in figure 3 below was observed on a shop door in the city of Zhenjiang, not far downstream from Nanjing. It provides some good examples of phonosemantic characters. Despite being a product of the Mainland, the ‘scroll’ reads vertically in the traditional fashion, right to left, ie Jūn jì ào chí, etc. Each character contains the now familiar element 马, but this time, not as a phonetic, but as a radical, so that the set of characters shows no particular commonality of sound. Rather, they all refer to types of horses or to attributes of horses.

The word-for-word glosses below are only very rough indications of meaning. Each set of 4 characters in a column forms a sentence consisting of an adjective and a noun, followed by an adverb and a verb. The sense is one of aspiration and hope.

| 驥 駿 xiāng  | Jùn Adj | galloping | Outstanding |
| 駒 騥 jū jì | foal N   |   | fleet+horse  |
| 騕 騄 huān ào | Adv joyously | proudly |
| 騆 騃 ténɡ chí, | soars V | races, |

The saying is not a well known one; in fact, though they would get the gist of the meaning, many Chinese would be hard pressed to say precisely what the difference was between a jumbotron and a jí (the second characters of each [vertical] line).

Figure 3: Front door, Zhènjiāng, near Nánjīng.
Chinese encountering rare characters such as some of those in the couplet, are quite likely to make use of radical and phonetic to remind them of meaning and pronunciation, respectively. Students of the language need the hints even more. With some allowance for 駢 which needs to be referred to other compounds (池 chí, 弛 chí) rather than just the right-hand element (也 yē), the pronunciation of the phonetic element alone matches that of the compound (except in tone). Thus 驥 and 冀 are both pronounced jì; 驢 is ào, 敵 is áo, 驤 and 襄 are both xiāng, etc.

2.7 Miscellany:

2.7.1 Reading Practice

a) Tone sets

Jiàntìzi

老師    很好    再見    不熱    很忙    不高
緊張    还好    看報    不累    很難    上課

Fántìzi

緊張    還好    看報    不餓    很難    上課
老師    很好    再見    不熱    很忙    不高

b) Tones

甲    乙    丙    丁
不忙    很好    不太累    忙嗎？
不餓    很累    不太好    緊張嗎？
不累    很忙    不太忙    餓嗎
不緊張    很高    不太高    好嗎
不高    很餓    不太餓    累嗎

c) Set 4 characters in fántìzi

沒有傘    沒有筆    還沒起來    書包    她的書    什麼
méiyǒu sǎn    méiyǒu bǐ    hái méi qǐlái    shūbāo    tā de shū    shénme
上車  字典  東西很貴  您好！貴姓？  手機
shàngchē  zìdiǎn  dōngxī hěn guì.  Nín hǎo! Guìxing?  shōujī

那不行。 字典很貴 你的行李呢？ 在這兒。  看書
Nà bù xíng.  zìdiǎn hěn guì  Nǐ de xínglǐ ne?  Zài zhèr.  kānshū

2.8 On the street #2

歡迎光臨  公話
huānyíng guānglín  gōnghuà
welcome  bright-presence  public+speech
Welcome [to you our] guests.

推  拉  空車 / 空车
tuī  lā  kōngchē
push  pull  empty-vehicle
[written on doors]  [on taxis]

Notes
a) The formal expression for welcoming customers  huānyíng guānglín, or
   thanking them  xièxié guānglín, is often written on the entrances of shops (eg on
   entrance doors, on walls, on floors).

b) Pay phones in China (at least up until the current year of 2005) can be found on
   the street or in other public places. While they do accept coins, most customers
   make use of one of the many brands of phone cards that can be brought from
   newspaper stands and small shops (at about 30 – 50% or more below face value).
   However, people seem to prefer using the ordinary telephones that small shops
   make available for public use. These are announced by small signs with  公話
   written on them. Normally, before making your call, you let the shopkeeper know
   the type of call (shìnèi ‘within the city’, shìwài ‘out of the city’ or guójì
   ‘international’ – though the last are not always possible from shop phones). You
   are charged afterwards – fees are usually very modest.

c) 推 and 拉 exhibit the ‘hand-radical’, a combining version of 手, called
   tīshǒupāng ‘raise-hand-beside’. It is associated with words having to do with
   manipulation.
