1. Show 3 polymers that could be synthesized from the following monomers. Show the structure of the polymer and any byproducts.

![Monomers](image1)

2. Show a suitable synthetic route to the following polymers. Show all reactants and byproducts.

![Polymers](image2)

Hint: This is a polyurethane. Check out protecting group chemistry.

3. Show the complete synthesis of the following tri-peptide using the Fmoc and suitable sidechain protecting groups. Assume that the amino acid monomers are available in their protected forms.
