Kundu & Cohen 6.4
This problem is from “Fluid Mechanics” by P. K. Kundu and I. M. Cohen 4th Edition

(a) Take a plane source of strength $m$ at point $(-a, 0)$, a plane sink of equal strength at $(a, 0)$, and superpose a uniform stream $U$ directed along the $x$-axis.

(b) Show that there are two stagnation points located on the $x$-axis at points

$$
\pm a \left( \frac{m}{\pi a U} + 1 \right)^{1/2}.
$$

(c) Show that the streamline passing through the stagnation points is given by $\psi = 0$. Verify that the line $\psi = 0$ represents a closed oval-shaped body, whose maximum width $h$ is given by the solution of the equation

$$
h = a \cot \left( \frac{\pi U h}{m} \right).
$$

The body generated by the superposition of a uniform stream and a source-sink pair is called a Rankine body. It becomes a circular cylinder as the source–sink pair approach each other.
