

# Ranging Experiment using the MIT IAP 2011 Laptop Based Radar\*

Presented at the 2011 MIT Independent Activities Period (IAP)

**Gregory L. Charvat, PhD**  
**MIT Lincoln Laboratory**

**17 January 2011**

\*This work is sponsored by the Department of the Air Force under Air Force Contract #FA8721-05-C-0002. Opinions, interpretations, conclusions and recommendations are those of the authors and are not necessarily endorsed by the United States Government.

# Radar Kit: Ranging vs. Time

1. Re-connect Vtune to modulator output.
2. Set up-ramp duration to 20 ms, adjust magnitude to span desired transmit bandwidth.
3. Deploy radar where there are moving targets
4. Record a .wav file.
5. Process .wav using read\_data\_RTI.m
  - Looks for rising edges of sync pulse on Left channel
  - Saves 20 ms of Right channel data from rising edge, puts into array of de-chirped range profiles
  - Coherently subtracts the last range profile from the current one (2-pulse canceller)
  - Displays the log magnitude of the IDFT of the result as a range-time-indicator (RTI) plot

# Example: Two People Walking in the Woods

MIT OpenCourseWare
