Negotiating a Global Climate Agreement (using the C-Roads Climate Policy Simulation)

Lecture 7
Recitation 4
Purpose of C-ROADS

(Climate Rapid Overview And Decision Support)

Developed by MIT Sloan Professor John Sterman & colleagues to improve understanding of important climate dynamics among

✓ Policymakers & negotiators
✓ Businesses, Educators, Civil Society
✓ Media
✓ The public

to help ensure that climate policy is informed by vetted, peer-reviewed science.
Welcome Delegates to COP 18 of the UNFCCC!
Doha, Quatar
November 26, 2012

Durban agreement, 2011: EU will continue its ETS, ALL nations agree to consider future restrictions, $100 billion in aid by 2020
Here’s Where You Are

**World Natural Gas Reserves by Country, January 1, 2011**

<table>
<thead>
<tr>
<th>Country</th>
<th>Reserves (Tcf)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Russia</td>
<td>1,680.0</td>
</tr>
<tr>
<td>Iran</td>
<td>1,045.7</td>
</tr>
<tr>

<td>275.2</td>
</tr>
<tr>
<td>United States</td>
<td>272.5</td>
</tr>
</tbody>
</table>

**Qatar’s LNG Exports, 1997-2009**

Quatar’s 2009 GDP/capita was $61,500 > $45,800 for the U.S., but Quatar is NOT an Annex I nation.
Your Roles

• Developed Nations
  Led by **US, EU, Japan**, but also Russia/FSUs/Eastern Europe, South Korea, Australia/NZ, Canada

• Developing A
  Led by **China, India, Brazil**, but also South Africa, Mexico, Indonesia, Phillipines, Thailand, Taiwan, Hong Kong, Malaysia, Pakistan, Singapore

• Developing B
  Small Island Nations and “LDCs”, representing Other Small Asia, Central/South America, Middle East, Bangladesh
Initial Process

• Break into negotiating blocs

• Introduce yourselves to members of your bloc

• Read Briefing Memo for your bloc (again…)

Our Global Task:

Manage the **Unavoidable**

and

Avoid the **Unmanageable**
Actual CO\textsubscript{2} Emissions vs. IPCC Assumptions

Emissions exceed IPCC Worst-case Scenario:

The Copenhagen Accord, Paragraph 1 (12/09)

1. We underline that climate change is one of the greatest challenges of our time. We emphasise our strong political will to urgently combat climate change in accordance with the principle of common but differentiated responsibilities and respective capabilities. To achieve the ultimate objective of the Convention to stabilize greenhouse gas concentration in the atmosphere at a level that would prevent dangerous anthropogenic interference with the climate system, we shall, recognizing the scientific view that the increase in global temperature should be below 2 degrees Celsius, on the basis of equity and in the context of sustainable development, enhance our long-term cooperative action to combat climate change. We recognize the critical impacts of climate change and the potential impacts of response measures on countries particularly vulnerable to its adverse effects and stress the need to establish a comprehensive adaptation programme including international support.
Your Goals

• A real, binding agreement, beyond Durban
• Achieve emissions reduction commitments to stabilize GHG levels by 2100 at a level that limits global warming to no more than 2°C above preindustrial levels (ignoring uncertainty)
• Agree on a fair deal (i.e., one that you can sell at home!) to share costs of mitigation and adaptation fund to aid less developed nations.
Developed Nations: Steady Growth in Emissions

BP Energy Outlook 2011: Projection w/o Strong Global Agreement
Task 1

- Each bloc will set its own fossil fuel emissions targets
  - You will set:
    - What year will emissions in your bloc stop growing (if any)?
    - (If desired), at what rate will emissions fall? (as a % per year)
    - Starting in what year?

- Developing A and B will set future deforestation
  - On a scale of 0 to 1, the current level is 1.
  - Choose 1 to continue BAU deforestation path, 0 to gradually eliminate deforestation over coming decades, or somewhere in the middle.
Task 2

- We are going beyond Durban & creating the “UN Global Fund for Mitigation & Adaptation” for
  - Disaster relief
  - Food and water
  - Immigration and refugees
  - Mitigation — Investing in any necessary non-cost-saving mitigation to achieve Task 1 goals
- Total cost is $100 Billion/ year for next 10 years
- What is your proposal for the fraction of the annual cost each Group should pay? Why?
Proposal Form

• World ______________ / Region: ______________

• CO₂ Emissions growth stop year: __________

• CO₂ Emissions decline start year: __________

• Fractional rate of decline (%/year): __________

• Your region’s contribution to fund for mitigation and adaptation ($B/year): __________

[Developing A and B only]

• REDD (Reduction in Emissions from Deforestation and land Degradation) (1 = no cut from BAU; 0 = max cut): __________
## Your proposals

<table>

<td>$10 Billion</td>
</tr>
</tbody>
</table>
After you prepare your region’s proposal

2-minute plenary presentation by each Bloc about their emissions proposal, their Fund commitment and why.

Designate a representative to give your Bloc’s speech.
Round 1
Debrief Round 1
GHG Emissions Under Current Proposals Continue to Exceed Removal from Atmosphere
Round 2
Debrief Round 2
Round 3
Debrief Round 3
Round 3
Overall Debrief
How can the world do this?

This is (mainly) NOT a technical question!!

& Nobody knows the answer!
