Foshan has great Canals on the North Side of the Site.

However, we have noticed these canals are polluted.

We propose that you use a new technology on the North End of the site.

We can use a new technology called the Restorer which has been successful in Fuzhou to restore the value of the canals. The Restorer uses plants to clean the water and transforms the canal from a polluted waterway to a pedestrian corridor and a neighborhood amenity. Here are before and after pictures from Fuzhou.
